5.1 Installation	7
5.2 Operating	7

## 1 General Information

The UFC 030 is a “four-wire” transmitter with 4...20mA current output and HART® capability. Dependent on device implementation it is available with active/passive current output (standard) or passive current output (MODIS).

General Characteristics of the UFC 030 HART® interface:

- Multidrop Mode is supported
- Burst Mode is not supported

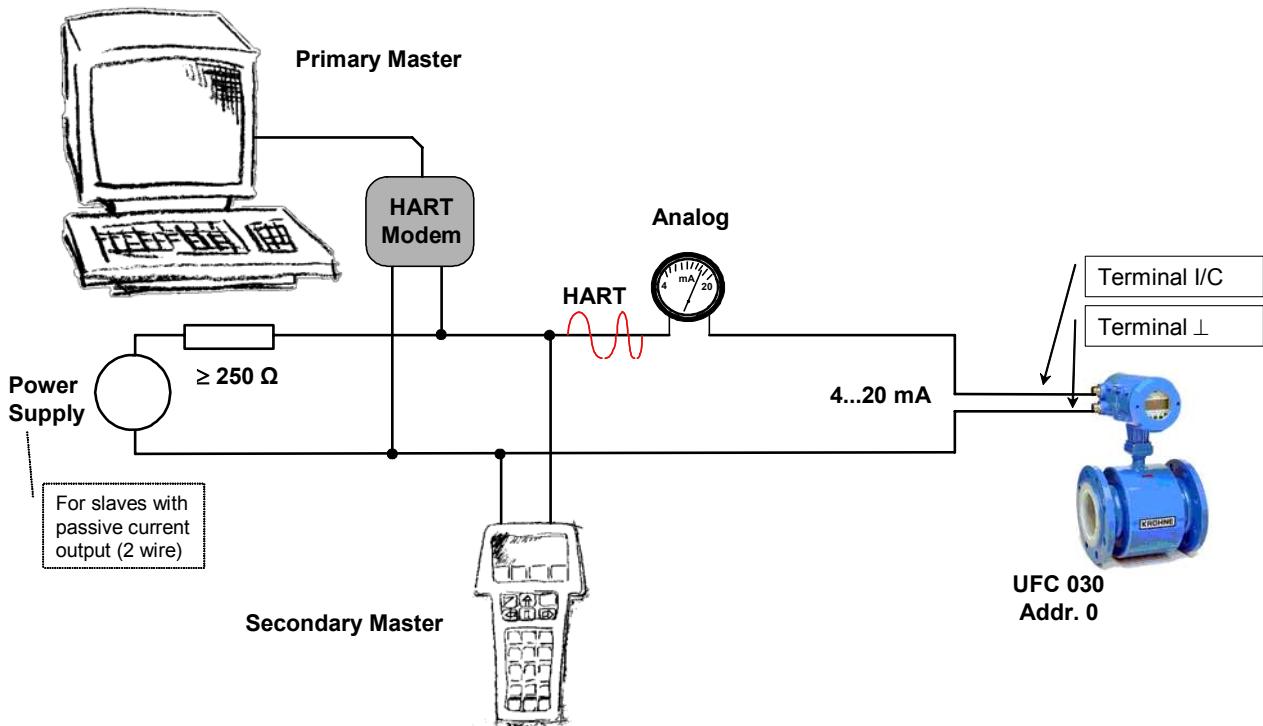

Electrical connection: Refer to section “Electrical connection of the signal inputs and outputs” of the following manual:

- “Installation and Operating Instructions Universal 3-Beam ultrasonic flowmeter UFM 3030 Compact ultrasonic flowmeter UFC 030 Ultrasonic flow converter UFS 3000 Ultrasonic flow sensor” (KROHNE)

There are two ways of using the HART® communication:

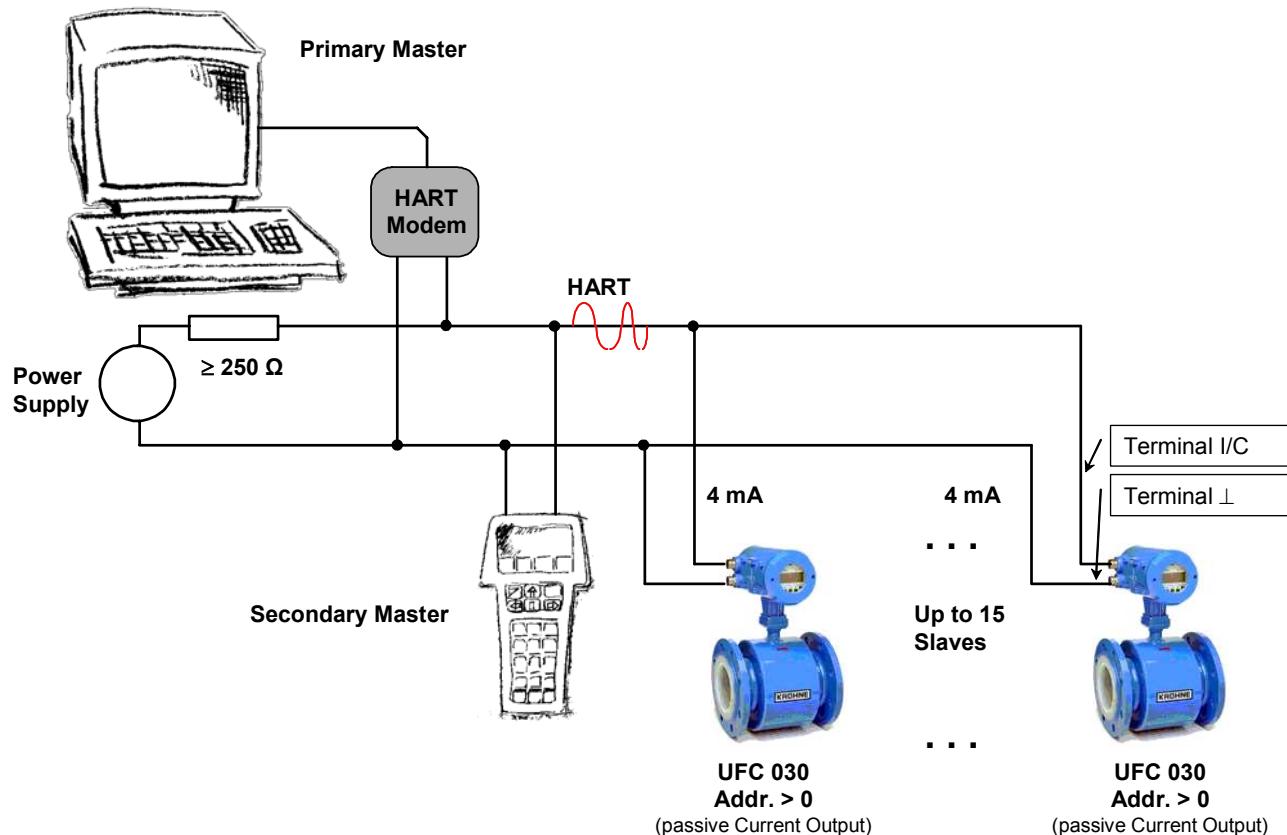

- a) As a point-to-point connection between the UFC 030 and the HART® master equipment. The instrument's current output may be active or passive.

### Point-to-Point Analog/Digital Mode

b) As a multipoint connection (multidrop) with up to 15 devices (UFC 030 or other HART® equipment) in parallel. The instrument's current outputs must be passive.

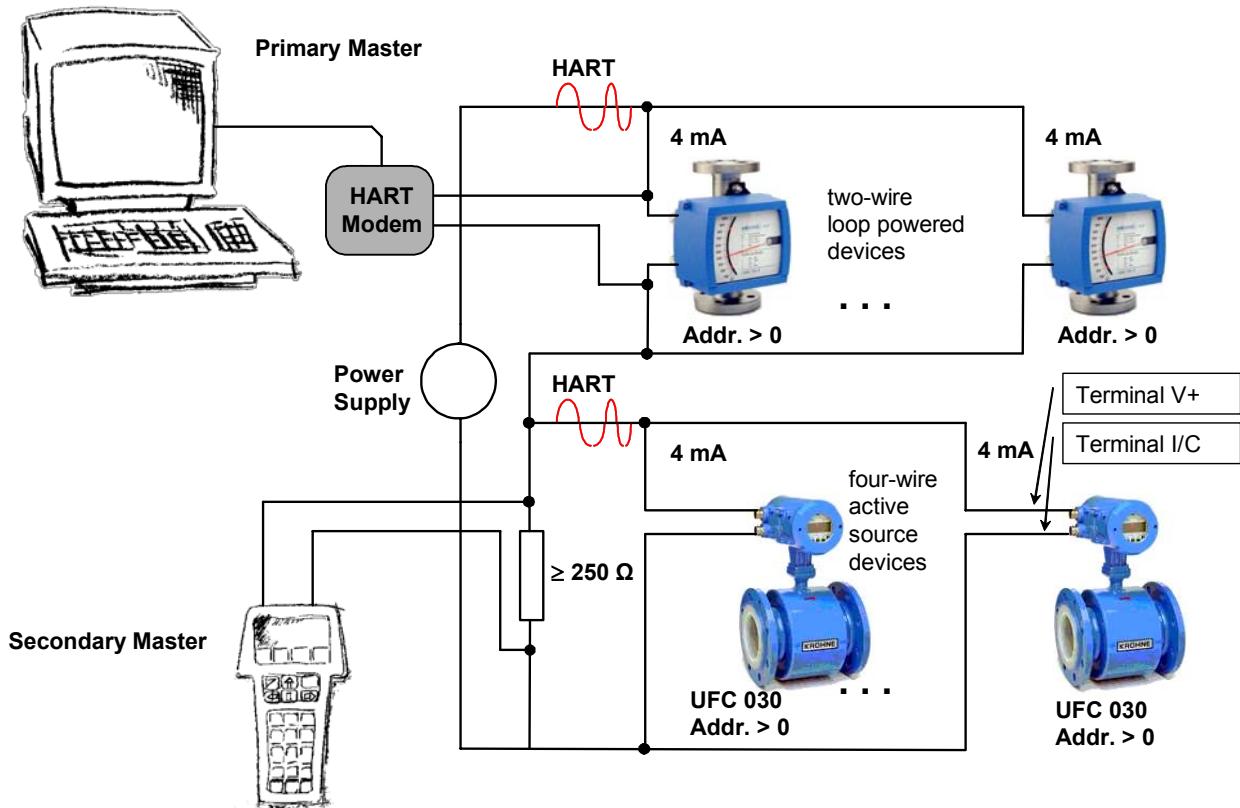

## Multidrop Mode

In case the UFC 030's current output shall work continuously active a 'third wire' is needed to properly connect it together with two-wire loop powered devices in the same network.

## Multidrop Mode ('three-wire')

(Connecting two-wire and four-wire devices in the same network)

## 2 IDs and Revision numbers

The HART Device Descriptions described in this document have the following IDs and revision numbers:

Manufacturer ID:	69 (0x45)
Device Type:	231 (0xE7)
Device Revision:	2
DD Revision:	1
HART Universal Revision:	5
HC 275 OS Revision:	≥ 4.9
FC 375 System SW Rev.:	≥ 1.6
AMS Version:	≥ 6.0
PDM Version:	≥ 5.2
FDT Version:	≥ 1.2

For information about Transmitter Revisions and related Device Descriptions refer to the KROHNE HART Device List.

## **3 HART Communicator 275 (HC275), Field Communicator 375 (FC375)**

### **3.1 Installation**

The UFC 030 HART Device Description has to be installed on the HC275 and FC375 respectively. Otherwise the user will work with the instrument as a generic one thus loosing opportunity for entire instrument control.

For installing DDs on the HC275 a 'HART Communicator Module Programmer' is needed (see details in the 'Module Programmer User's Guide').

For installing DDs on the FC375 the 'Easy Upgrade Programming Utility' is needed and the FC375 must have a System Card with 'Easy Upgrade' option (see details in the '375 Field Communicator User's Manual').

### **3.2 Operating**

Refer to the UFC 030 Menu Tree HC275 / FC375 (Attachment A).

The UFC 030 operation via HC275 / FC375 is made quite close to the manual instrument control via keypad.

Due to limitations of the HC275 / FC375 there are some peculiarities:

- The online help of each parameter is only a short form help. However it contains the function number as a reference to the device's local display and the "Installation and Operating Instructions" for a comprehensive description.
- Some selection lists (e.g. for output functions) may contain items which are actually not valid for the device concerned. However invalid settings are rejected when trying to send them to the device.

Parameter protection via passwords (Entry Code, Service Code) is the same as on local display. Please refer to the online help for valid symbols according to device's keypad.

The set of parameters of the HC275 "standard configuration" is only a partial set which doesn't contain service parameters. However the HC275 "full configuration" contains a complete set of parameters. Prior to sending a "full configuration" to a device the Service Code protection must be disabled in case. Both types of configurations can be transferred to AMS.

The FC375 always creates a "full" configuration for interaction with AMS. Still the FC375 considers only a partial parameter set (like the HC275 "standard configuration") when sending it to a device.

## **4 Asset Management Solutions (AMS)**

### **4.1 Installation**

If the UFC 030 Device Description is not already installed on the AMS System a so called *Installation Kit UFC 030 HART AMS* is needed (available as download from KROHNE 'Download Centre' on the internet or on floppy disk / CD-ROM from KROHNE).

For installing the DD with the Installation Kit refer to the "AMS Intelligent Device Manager Books Online" section "Basic AMS Functionality /Device Configurations / Installing Device Types / Procedures /Install device types from media". Please read also the "readme.txt", which is also contained in the Installation Kit.

### **4.2 Operating**

Refer to the UFC 030 Menu Tree AMS (Attachment B).

Due to AMS requirements and conventions the UFC 030 operation differs to some extent from operation with HC275 / FC375 and via local keypad.

Due to limitations of the HC275 / FC375 which affect also AMS there are some peculiarities:

- The online help of each parameter is only a short form help. However it contains the function number as a reference to the device's local display and the "Installation and Operating Instructions" for a comprehensive description.
- Some selection lists (e.g. for output functions) may contain items which are actually not valid for the device concerned. However invalid settings are rejected when trying to send them to the device.

Parameter protection via passwords (Entry Code, Service Code) is the same as on local display. Please refer to the online help for valid symbols according to device's keypad.

## 5 Process Device Manager (PDM)

### 5.1 Installation

If the UFC 030 Device Description is not already installed on the PDM System a so called *Device Install* is needed (available as download from KROHNE 'Download Centre' on the internet or on floppy disk / CD-ROM from KROHNE).

For installing the DD with the Device Install refer to the "PDM Manual" section 11.2:"*Device Install / Integrating Devices in SIMATIC PDM with 'Device Install'*". Please read also the "readme.txt", which is also contained in the Device Install.

### 5.2 Operating

Refer to the UFC 030 Menu Tree PDM (Attachment C).

Due to PDM requirements and conventions the UFC 030 operation differs to some extent from operation with HC275 / FC375 and via local keypad.

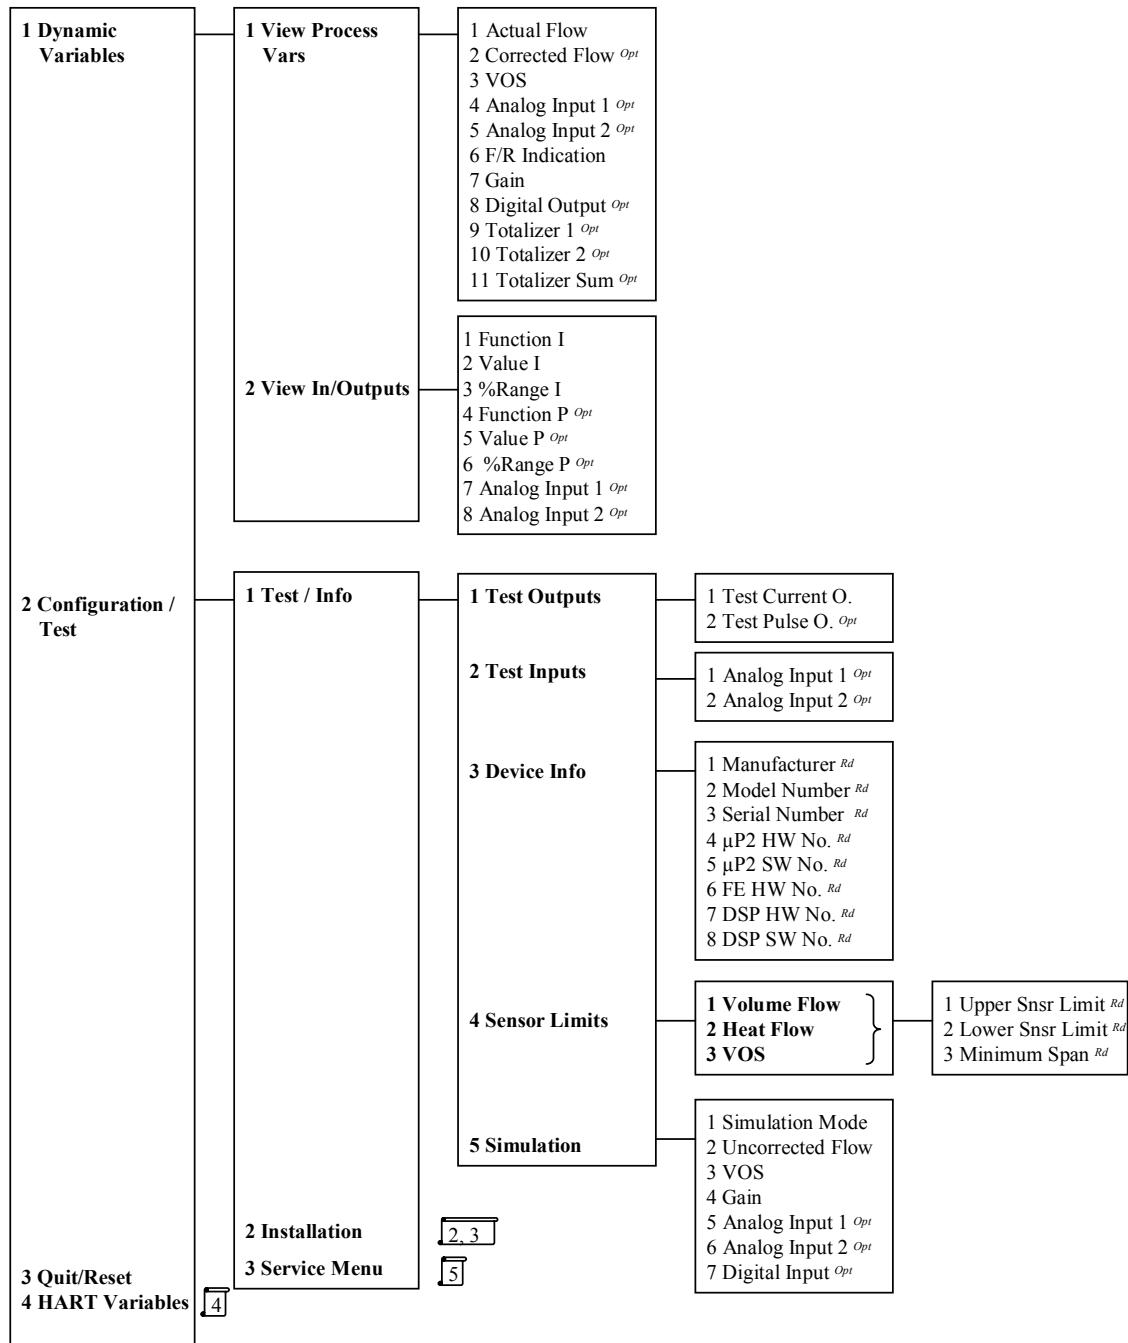

Due to limitations of the HC275 / FC375 which affect also PDM there are some peculiarities:

- The online help of each parameter is only a short form help. However it contains the function number as a reference to the device's local display and the "Installation and Operating Instructions" for a comprehensive description.
- Some selection lists (e.g. for output functions) may contain items which are actually not valid for the device concerned. However invalid settings are rejected when trying to send them to the device.

Parameter protection via passwords (Entry Code, Service Code) is the same as on local display. Please refer to the online help for valid symbols according to device's keypad.
