(15)Description

The Compact Magnetic Inductive Flowmeter, types IFM 5080 K-EEx, IFM 5080K/i-EEx, MGM 5090 K-EEx and MGM 5090 K/i-EEx is used for measuring, counting and displaying the linear flow of an electrical conductive liquid.

The flowmeter consists of a signal converter housing in type of explosion protection flameproof enclosure "d" with a terminal compartment in type of explosion protection flameproof enclosure "d" or increased safety "e". The integral primary heads sizes DN2,5 to DN100 are in type of explosion protection encapsulation "m" and are provided with measuring electrodes in type of explosion protection intrinsic safety EEx ib IIC.

Ambient temperature range -20 °C ... +60 °C.

Installation instructions

For use in potentially explosive atmospheres of flammable gases, fluids or vapours: The cable entry device shall be in type of protection flameproof enclosure "d" for the terminal compartment in type of protection flameproof enclosure "d" or increased safety "e" for the terminal compartment in type of protection increased safety "e", suitable for the conditions of use and correctly installed.

For use in the presence of combustible dust:

The cable entry device shall be in type of equipment Category II 2 D, suitable for the conditions of use and correctly installed.

Unused openings shall be closed with suitable certified closing elements.

(13) SCHEDULE

(14) to EC-Type Examination Certificate KEMA 01ATEX2262 X

Installation instructions (continued)

With the use of conduit, a suitable certified sealing device such as a stopping box with setting compound shall be provided immediately at the entrance to the flameproof enclosure.

Routine tests

- Each primary head shall withstand a test voltage according to EN 50028, Clause 7.2, of 1500 V during one minute without breakdown between the field coils circuit and the enclosure and between the field coils circuit and the intrinsically safe sensor circuit.
- Routine tests according to EN 50018, Clause 16 are not required for the electronics enclosure since the type test has been made at a static pressure of four times the reference pressure.
