Ultrasonic flowmeters

KROHNE has over 25 years experience in ultrasonic flow metering. Since 1980 over 30,000 KROHNE ultrasonic flowmeters have been installed in the field with reliable and trouble-free operation.

With their high level of performance, unique properties and wide application range, ultrasonic flowmeters are gaining a leading position in the global flowmeter market. The benefits provided by ultrasonic flow meters are rapidly making them indispensable solutions for industrial processes.

UFM 3030 offers all advantages of ultrasonic flowmeters. Flow measurement is independent of conductivity, viscosity, temperature, density and pressure. The unobstructed flow sensor, with smooth surface finish, inhibits any material build up. This, combined with no moving parts to wear out, provides for many years of maintenance-free service.

Universal use

UFM 3030 has a very wide application range. In industrial process applications, both acids and caustic solutions can be measured, ranging from sulfuric acid to caustic soda. Also, inorganic substances from molten sulfur to chlorine and organic substances including liquefied gasses do not cause any problems for UFM 3030.

In the oil and gas industry the applications range from heavy crude oils to bitumen and liquefied petroleum gasses (LPG's).

In the water markets UFM 3030 can be used for measuring drinking water as well as for cooling water and demineralized water.

It is KROHNE's policy to test every flowmeter that leaves our factory by means of wet calibration to guarantee the highest possible accuracy and quality standards. Therefore KROHNE owns accredited calibration rigs that comply with the most stringent demands (according to **IEC-ISO 17025**).

UFM 3030

Universal 3-beam in-line ultrasonic flowmeter for liquids

Experience a new dimension in ultrasonic technology

A new dimension in:

- Performance
- Installation
- Operational and maintenance costs
- Price

The third beam adds a new dimension!

The three measuring beams of UFM 3030 generate a 3-dimensional cross-section of the medium's velocity distribution, or flow profile, through the measuring tube. These measuring beams are positioned such that measurement is effectively independent of the flow profile.

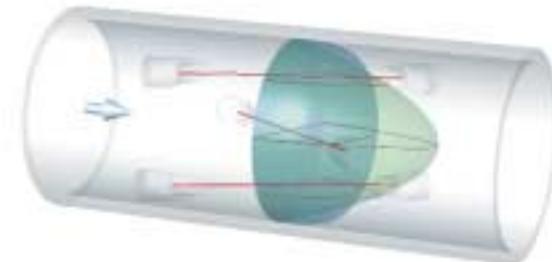

Major performance improvements have been achieved by applying innovative electronics in combination with Digital Signal Processing (DSP). This results in stable and reliable measurements.

The meter is therefore more accurate and less sensitive to changes in the flow profile, solids or entrained air. UFM 3030 is a universal meter in a very broad range of applications.

A new feature of the UFM 3030 is the possibility to control batching operations, directly from UFM 3030. Optionally, pressure and temperature inputs can be accommodated for the calculation of standardized volumetric flow or mass flow (according to API 2540 or customer specifics).

Naturally, a complete offering of communication protocols and approvals for hazardous areas makes it possible to integrate the meter into existing systems.

Flow profile

The third measuring beam allows UFM 3030 to take conditions from laminar to turbulent flow into consideration.

Step into the new dimension!

How does UFM 3030 operate?

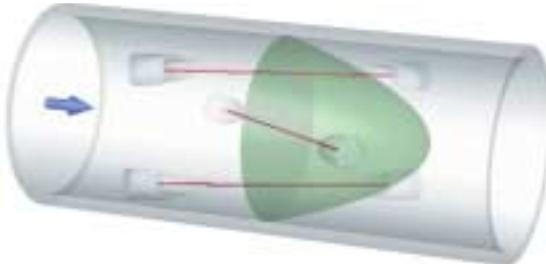

UFM 3030 operates like all KROHNE ultrasonic flowmeters, by the transit-time differential method. This measuring principle is based on a simple physical principle.

Imagine two canoes crossing a river diagonally, one with the flow and one against the flow. Naturally, the canoe that is travelling with the flow will reach the opposite side sooner than the canoe that is travelling upstream. Acoustic signals behave in a comparable way.

By means of 3 pairs of patented ultrasonic transducers, the transit times of acoustic signals that travel upstream and downstream are measured.

Laminar flow

UFM 3030 exceeds your expectations in...

...Performance

UFM 3030 has a very wide application range. Three measuring beams combined with patented sensors, dedicated electronics and innovative digital signal processing techniques provide reliable, stable measurements, even under difficult process conditions. As a result, flowmeter drift and, therefore, process re-tuning has become an annoyance of the past.

...Installation

UFM 3030 is a light-weight, compact meter that is easy to install and operate. Additional arrangements such as filters, flow strainers, supports, grounding or isolation against vibrations are not necessary. Since the meter is maintenance-free, even installation in difficult to access locations is possible.

...Operational and maintenance costs

UFM 3030 has no intruding or moving parts. There is no additional pressure loss or wear and tear. Thus the meter is maintenance-free and far more energy efficient.

...Price

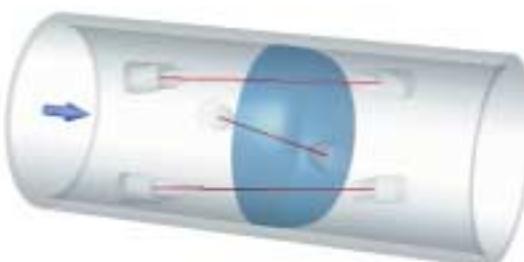

UFM 3030 is very attractively priced. The total costs of a measuring installation with UFM 3030 are considerably lower than those of a comparable installation of a coriolis mass or a vortex flowmeter. Moreover, one universal meter for all your applications keeps your engineering and inventory costs to a minimum.

The difference in transit time is proportional to the mean flow velocity and is converted into an output signal and display of volumetric flow rate and total.

The measuring beams in a UFM 3030 make a three-dimensional cross section of the velocity distribution or flow profile of the medium flowing through the measuring tube. These measuring lines are positioned so that the influence by flow profile (laminar or turbulent) is reduced greatly. Combined with the use of the latest digital processing techniques, the results are stable and reliable flow measurements.

Day in, day out. Year in, year out. There is no drift in measurements, and repeatable process control is achieved.

Turbulent flow

UFM 3030 Specifications**Versions**

The UFS 3000 ultrasonic flow sensor is combined with the UFC 030 ultrasonic flow converter to make a complete flowmeter, the UFM 3030 ultrasonic flowmeter, either in separate or compact version. Both the sensor and the converter are approved for use in hazardous areas.

Compact Version

UFM 3030 K

UFM 3030 K

UFC 030 K ultrasonic flow converter is mounted directly on the UFS 3000 ultrasonic flow sensor

UFM 3030 K - EEx / FM / CSA (hazardous area locations)

Separate Version

UFM 3030 F

UFS 3000 + UFC 030

UFC 030 F ultrasonic flow converter is remotely mounted from the UFS 3000 ultrasonic flow sensor

UFM 3030 F - EEx / FM / CSA (hazardous area locations)

Measurement functionality

Standard
Optional

- Actual volume with simple single stage batching function
- Corrected or standardized volume flow rate to API 2540 or customer specified
- Customer specified mass flow (requires customer data)

Process conditions

Liquids with maximum solid particle content < 5% (by volume) or
maximum gas content < 2% (by volume)

Communications protocols

Standard
Optional

HART®
Profibus PA

Measuring range

UFM 3030 measures a wide range of flow velocities,
starting from $v = 0 \text{ ft/s}$ to 66 ft/s (0 m/s up to 20 m/s)

Measuring accuracy (under reference conditions)

Measuring error ($v = \text{flow velocity}$)

$v = 1.5 \text{ to } 60 \text{ ft/s}$ ($0.5 \text{ to } 20 \text{ m/s}$) $< \pm 0.5\%$ of measured value
 $v < 1.5 \text{ ft/s}$ (0.5 m/s) $< \pm 0.1 \text{ inch/s}$ ($\pm 2.5 \text{ mm/s}$) of measured value

Measuring repeatability

$\pm 0.2\%$ of measured value

Influence of temperature

$< \pm 0.1\%$ per 18°F (10°C)

Hazardous area approvals

ATEX IEC 529-EN 60 529, EEx de ib IIC Tb ... Ts,

FM Class I, Div. 1 & 2, Groups A, B, C & D

Class II, Div. 1, Groups E, F & G

Div. 2, Groups F & G

Class III, Div. 1 & 2

CSA Class I, Div. 1 & 2, Groups A, B, C & D

Class II, Div. 1 & 2, Groups E, F & G

Class III, Div. 1 & 2

Temperature limits**Compact version**

Medium temperature

-13°F to +284°F (-25°C to +140°C)

Ambient temperature

-40°F to 149°F (-40°C to +65°C)

Separate version

Medium temperature

-13°F to +356°F (-25°C to +180 °C)

Ambient temperature

-40°F to 149°F (-40°C to +65°C)

Optional extended medium temperature

13°F to +428°F (-25°C to 220°C) up to 6 inch / DN150

Special versions

for medium temperatures ranging from -274°F to +932°F (-170°C to +500°C)
available on request (HT/HP version)

Protection category

according to IEC 529 (EN 60 529)

Standard (separate and compact versions)

IP 67 (equivalent to NEMA 6 and 6P)

Optional for separate version

IP 65 (equivalent to NEMA 4 and 4X) or IP 68 (equivalent to NEMA 6 and 6P)

UFS 3000 Ultrasonic Flow Sensor

UFS 3000 Ultrasonic Flow Sensor

Flange connections

Materials

Measuring tube (exterior polyurethane coated)	DN 25 - 300 / 1" - 12" SS 316 L (comparable to stainless steel 1.4404 and 1.4435) DN 350 - 3000 / 14" - 120" carbon steel
External sensor cover	≤ DN 65 / 2½" SS 316 L ≥ DN 80 / 3" carbon steel ≥ DN 350 / 14" individual SS 316 L external transducer housing
Transducer/Transducer windows	SS 316 L
Flanges (exterior polyurethane coated)	< DN 65 / 2.5" SS 316 L > DN 80 / 3" carbon steel
Connection box (exterior polyurethane coated)	Die-cast aluminium

Patented transducer design

UFM 3030 - Cross section

Hermetically sealed 3-beam design

UFC 030 Ultrasonic Flow Converter

The converter has a backlit local display with three push buttons. All configuration data can either be entered by the push buttons or with the aid of a hand-held bar magnet and electromagnetic sensors, without opening the converter housing, or via the communication protocol (standard HART®). The compact converter (UFC 030 K) is mounted directly on the flow sensor, while the separate version (UFC 030 F) is supplied with a bracket for wall or pipe mounting.

**Overall Functionality****Measurements available**

|----------|--|
| Standard | <ul style="list-style-type: none">● Continuous measurement of momentary volume flow rate and actual volume total● Flow direction (forward or reverse)● Velocity of Sound (VOS)● Signal strength● Self diagnostics● Simple single stage batching |
| Optional | <ul style="list-style-type: none">● Corrected or standardized volume flow rate to API 2540 or customer specified● Customer specified mass flow (requires customer data) |

Bidirectional measurement

Direction identified via status, pulse, or current outputs

Low flow cut-offCut-off active value 1-19% } programmable in increments of 1%
Cut-off de-active value 2-20%**Time constant**

0.025 - 99 seconds (set in increments of 0.01; 0.1 and 1.0 seconds)

Galvanic isolation

All inputs and outputs are galvanically isolated from the power supply, but not from each other

Power supply

- | | |
|--------------------|---|
| mains supply | <ul style="list-style-type: none">● 100 - 240 V AC (48-63 Hz) +10% / -15% |
| low voltage supply | <ul style="list-style-type: none">● 24 V (AC or DC), AC: -10% / +15%, DC: 18 - 35 V |

Power consumption

approx. 10 VA (AC) or approx. 10 W (DC)

Current output**Function**

- | | |
|----------|--|
| Standard | <ul style="list-style-type: none">● Continuous measurement of actual volume flow rate● Flow direction indication (forwards and reverse)● Velocity of Sound (VOS)● Transducer signal amplification● Pressure or temperature indication based on analog input (1) or (2) |
| Optional | <ul style="list-style-type: none">● Corrected or standardized volume flow rate to API 2540 or customer specified● Customer specified mass flow (requires customer data) |

Settingsfor Q = 0%; 0 - 16 mA } programmable in increments of 1mA (Limit 20 - 22 mA)
for Q = 100%; 4 - 20 mA**Connection**Active mode: using internal power supply 24 V DC
Current sink, load ≤ 680 ohm
Passive mode: external voltage ≤ 18 ... 24 V DC, load ≤ 680 ohm

Pulse / Frequency / Status output**Function**

Pulse output:

pulse per volumetric unit (m^3 , barrels, liters, US gallons or user defined volume unit per hour, minute, second or user defined time unit)Standard
Optional

- Actual volume
- Corrected or standardized volume to API 2540 or customer specified
- Customer specified mass (requires customer specific density input)

Frequency output

Standard

- Continuous measurement of actual volume flow rate
- Velocity Of Sound (VOS)
- Transducer signal gain (dB)

Optional

- Pressure or temperature indication based on analog input (1) or (2)
- Corrected or standardized volume flow rate to API 2540 or customer specified
- Customer specified mass flow (requires customer specific density input)

Status output

- Diagnostics alarm path errors, totalizer overrun, all errors, analog input
- Flow direction indication (forwards and reverse)
- Batch volume reached
- Alarm trip point (high and low) based on actual volume flow rate

Settings

Pulse output

Pulse/unit (max. 2000 Hz) (example 1000 pulses/barrel) pulse duty cycle 25, 50, 100, 200, or 500 ms for frequency < 10 Hz

Frequency output

0 to 2 000 Hz (example $Q_{0\%}$ - 0 Hz, $Q_{100\%}$ - 1000 Hz) at 100% of scale value, fmax - 2 kHz

Status output

On or Off

Voltage output = Uout

Low: Uout < 5 V (off)

High: Uout > 15 V (on)

Max. Uout = 24 VDC

Connection

Pulse, frequency and status output:

- Active mode connection to electronic counters using internal power supply 24 V DC / $I \leq 50$ mA
- Passive mode connection to electronic (EC) or electromechanical counters (EMC) external voltage, ≤ 19 - 32 VDC / $I \leq 150$ mA

Analog input**Function**

- Corrected volume version: two inputs to connect temperature and pressure signals for the corrected standard volume, according to API 2540, user defined volume or mass
- Measurement update 1 Hz

Setting

Input 1

- Unit: °Celsius or °Fahrenheit
- Temperature for 4 mA, maximum temperature range -58°F to 302°F(-50°C to 150°C)
- Temperature for 20 mA, maximum temperature range of -58°F to 302°F(-50°C to 150°C)

Input 2

- Unit: bar or psi
- Pressure for 4 mA, maximum pressure range 0 to 1450 psi (0 to 100 bar)
- Pressure for 20 mA, maximum pressure range 0 to 1450 psi (0 to 100 bar)

Connection

Input 1

- 4-20 mA for temperature sensor
- Load 58 Ohm

- Active (using UFC 030 24 V DC power) or passive

Input 2

- 4-20 mA for pressure

- Load 58 Ohm

- Active (using UFC 030 24 V DC power) or passive

Control input**Function**

- Reset totalizer
- Acknowledge errors
- Force outputs to zero
- Initiate batch (see operating instructions for description of this function)

Setting

- On or Off

Connection

Input voltage (Uin)

- Low: Uin < 5 V (off)
- High: Uin > 15 V (on)
- Max.: Uin-max = 32 V

Local display

3-field backlit LCD

1st line 8 character 7 segment numeral and sign display and symbols for key acknowledgement

2nd line 10 character, 14 segment text display

3rd line 5 markers to identify display in measuring mode

Function

- | | |
|----------|---|
| Standard | <ul style="list-style-type: none"> ● Actual volume flow rate in m³, barrels, liters, US gallons or user defined volume unit per hour, minute, second, or user defined time unit ● Actual volume total in m³, barrels, liters, US gallons or user defined volume unit (positive, negative, and sum totals), minimum 1 year overflow time ● Velocity of sound in m/s or ft/s ● Errors (flashing display and error code) ● Signal strength (in dB) |
| Optional | <ul style="list-style-type: none"> ● Corrected standard volume flow rate in m³, barrels, liters, US Gallons or user defined volume unit per hour, minute, second or user-defined time unit ● Calculated mass flow rate in user defined mass unit ● Corrected standard volume total in m³, barrels, liters, US Gallons or user defined corrected volume unit, minimum 1 year overflow time ● Calculated mass total in user defined unit, minimum 1 year overflow time ● Analog input in °C, °F, bar or psig |

Sizing

Choosing the correct size meter is very simple due to the extremely wide range of possible velocities, from 1.5 ft/sec (0.5 m/s) all the way up to 66 ft/sec (20 m/s).

Below 1.5 ft/sec (0.5 m/s) the stated accuracy begins to degrade, but measurement is still possible, all the way down to zero flow.

Standard installation instructions

- Completely filled flow sensor

Install the UFS 3000 ultrasonic flow sensor at a location where it will be completely filled under all circumstances, including zero flow velocity.

- Flow conditioning

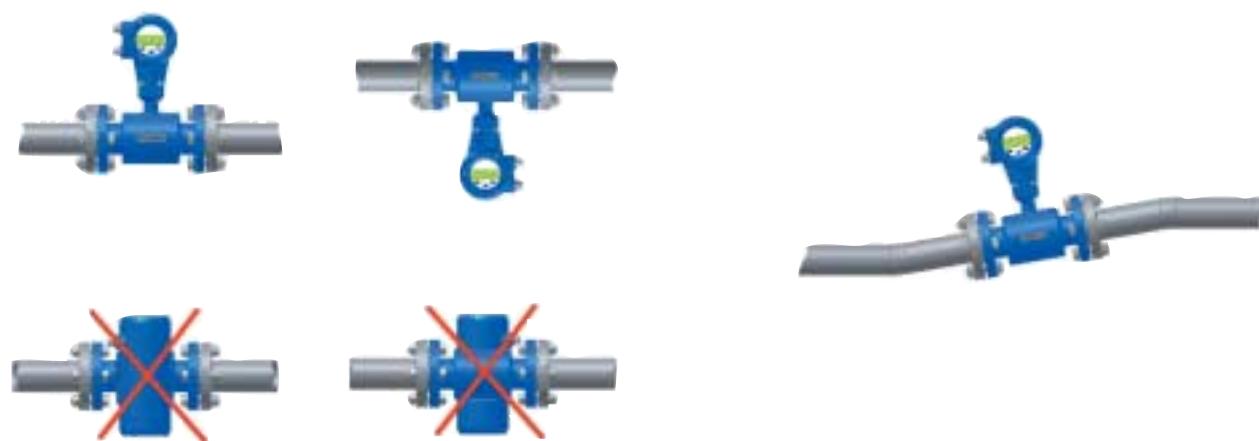

To maintain flow measurement within the stated accuracy under all circumstances, it is required to install 10D of straight pipe run before and 5D after the flow sensor. D = diameter of the flow sensor.

Deviation from these up and down stream runs may affect the accuracy of the flow meter, not its functioning or its repeatability.

● Horizontal Pipelines

Make sure the ultrasonic flow sensor is installed so the acoustic beams are in a horizontal plane:

In long horizontal pipe runs, where the collection of 'air pockets' in the ultrasonic flow sensor are expected, installation of the meter in a slightly ascending section is advised.

- Pumps and control valves**

Always install the UFM 3030 downstream of pumps.

Always install the UFM 3030 upstream of control valves, to avoid cavitations and flow disturbances caused by the modulation of the valve.

- Zero checking**

Zero setting is not required with ultrasonic flow meters.

For zero checking it is advised to install shutoff valves before or after the flow sensor.

- Mixing points**

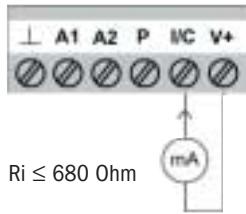

Install the UFM 3030 upstream of chemical addition mixing points or at a sufficient distance downstream to allow homogeneous mixing, minimum 30D (D = nominal pipe diameter), otherwise measurements may be unsteady.

Consult KROHNE for advice on applications exceeding these general recommendations.

KROHNE offers you complete capability

UFM 3030 is the latest in a line of innovative level and flow products designed and manufactured by KROHNE for process industries worldwide.

With manufacturing facilities and sales offices strategically located in all major industrial markets,

KROHNE is ideally placed to provide both front line and after sales service and support for end-users and contractors alike.

KROHNE is one of the very few manufacturers who can offer a comprehensive range of level and flow products ensuring that the right solution is available for each application.

The KROHNE range includes the following products and technologies:

- Flowmeters: Electromagnetic, Ultrasonic, Vortex, Variable Area
- Mass Meters: Density/concentration Coriolis
- Flow Switches: Moving Vane and Electromagnetic
- Level Gauges: Radar (Microwave & TDR) & Float
- Level Switches: Capacitance and Vibrating Probe
- Communications: HART®, FF, PROFIBUS, MODBUS, PDM and AMS
