6 Notes
1.1 Scope of the document

These instructions are applicable only to the explosion-protection version of the TDR level transmitter. For all other data, use the Quick Start and Handbook. If you do not have these documents, please contact the nearest office or download them from the manufacturer’s internet site.

INFORMATION!
The information in these supplementary instructions only contains the data applicable to explosion protection. The technical data for the non-Ex version in the Handbook shall be valid in its current version, provided that it is not rendered invalid or replaced by these supplementary instructions.

WARNING!
Installation, commissioning and maintenance may only be carried out by “Personnel trained in explosion protection”.

1.2 Device description

This device is a 2-wire level transmitter that uses TDR (Time Domain Reflectometry) / Guided Radar technology. It measures the level, distance, volume and mass of liquids, liquid gases, pastes, powders, slurries and granular products. Measurements are displayed via a DTM (device type manager) for remote communication or an optional integrated display screen with wizard-driven setup and online help functions.

The level transmitter is approved for use in potentially explosive atmospheres when equipped with the appropriate options.

1.3 Standards and approvals

DANGER!
In compliance with NEPSI scheme regulations, the Ex ia-approved version of the device described in these Supplementary Instructions agrees with Chinese National Standards GB 3836.1-2010, GB 3836.4-2010, GB 3836.20-2010 and GB 12476.1-2000. The Ex ia-approved version is certified for use in hazardous areas by The National Supervision and Inspection Centre for Explosion Protection and Safety of Instrumentation (NEPSI) under GYJ13.1022X [compact device] and GYJ13.1024X [device with remote converter option].

DANGER!
In compliance with NEPSI scheme regulations, the Ex d ia-approved version of the device described in these Supplementary Instructions agrees with Chinese National Standards GB 3836.1-2010, GB 3836.2-2010, GB 3836.4-2010, GB 3836.20-2010 and GB 12476.1-2000. The Ex d ia-approved version is certified for use in hazardous areas by The National Supervision and Inspection Centre for Explosion Protection and Safety of Instrumentation (NEPSI) under GYJ13.1023X [compact device] and GYJ13.1025X [device with remote converter option].

WARNING!
Carefully read the NEPSI explosion protection certificates of conformity. Obey the boundary conditions.
1.4 Equipment protection levels (EPL) and dust zones

1.4.1 Ex ia-approved devices

The Ex ia-approved device is suitable for use in potentially explosive atmospheres of all flammable substances in Gas Groups IIA, IIB and IIC when fitted with appropriate options. It is certified for applications for which an EPL of Ga/Gb or Gb is necessary.

The Ex ia-approved device is also suitable for use in potentially explosive atmospheres of all flammable substances in Dust Zones 20/21 when fitted with appropriate options.

1.4.2 Ex d ia-approved devices

The Ex d ia-approved device is suitable for use in potentially explosive atmospheres of all flammable substances in Gas Groups IIA, IIB and IIC when fitted with the appropriate options. It is certified for applications for which an EPL of Ga/Gb or Gb is necessary.

The Ex d ia-approved device is also suitable for use in potentially explosive atmospheres of all flammable substances in Dust Zones 20/21 when fitted with the appropriate options.
1.5 NEPSI nameplates

Signal converter housing (compact and remote (field) versions)

Figure 1-1: Nameplate on the signal converter housing (compact and remote (field) versions) – Chinese text for devices made in China

Figure 1-2: Nameplate on the signal converter housing (compact and remote (field) versions) – English text for devices made outside of China

1. Approval logo
2. NEPSI certification agency code
3. Types of device protection including approved Gas Groups and temperature classes (T6...T3 or T2 – depends on the probe type), equipment protection level, Dust Zones [certification agrees with test method “A”], maximum surface temperature and degree of ingress protection [if fitted with the appropriate cable glands]
4. 4...20 mA passive – HART output option [Ex ia approvals]: Intrinsically-safe circuit data
4...20 mA passive – HART output option [Ex d ia approvals]: Maximum voltage in accordance with GB 3836.1. Refer to
4 for the input voltage range. Minimum waiting time after power-off before it is safe to open the terminal compartment.

Fieldbus (FF or PROFIBUS PA) options: Entity or FISCO power supply parameters

5. Text: For ambient temperature data, please refer to the installation and operating manual
6. Cable entry type and size (M20×1.5 or ½ NPT)
7. Input voltage range and maximum current (4...20 mA passive – HART) / basic current (FF or PROFIBUS PA)
Probe housing (remote (field) version)

Figure 1-3: Nameplate on the probe housing (remote (field version)) – Chinese text for devices made in China

Figure 1-4: Nameplate on the probe housing (remote (field version)) – English text for devices made outside of China

1. Approval logo
2. NEPSI certification agency code
3. Types of device protection including approved Gas Groups and temperature classes (T6...T3 or T2 – depends on the probe type), equipment protection level, Dust Zones (certification agrees with test method "A"), maximum surface temperature and degree of ingress protection (if fitted with the appropriate cable glands)
4. Text: For ambient temperature data, please refer to the installation and operating manual
2.1 Precautions

2.1.1 General notes

**WARNING!**
When you install the device, obey the conditions in the certificate of conformity. The certificate is given on the DVD-ROM supplied with the device. You can also download the certificate from our internet site.

**DANGER!**
This installation must agree with Chinese Law and NEPSI regulations. For more data, refer to the related NEPSI explosion protection certificates of conformity and these Chinese National Standards:
- **GB 505257**: Code for construction and acceptance of electric device for explosion atmospheres and fire hazard electrical equipment installation engineering,
- **GB 3836.13**: Electrical apparatus for explosive gas atmospheres – Part 13: Repair and overhaul for apparatus used in explosive gas atmospheres,
- **GB 3836.15**: Electrical apparatus for explosive gas atmospheres – Part 15: Electrical installation in hazardous area (other than mines), and
- **GB 3836.16**: Electrical apparatus for explosive gas atmospheres – Part 16: Inspection and maintenance of electrical installation (other than mines)

**DANGER!**
Risk of electrostatic discharge from the painted surfaces of the aluminium housing and the plastic protective sheathes [PVC, PVDF or PP] on single rod probes.

**DANGER!**
Take the necessary antistatic precautions if:
- you handle the device in potentially explosive atmospheres,
- you install the device in potentially explosive atmospheres or
- you use the device in potentially explosive atmospheres.

Install the device correctly to prevent electrostatic discharge. Make sure that all equipment is correctly grounded.

Make sure that the housing and adjacent objects do not rub together.

If dirt collects on the device, clean it with a damp cloth.

**WARNING!**
If there is a risk of electrostatic discharge, FEP-coated single cable probes and plastic protective sheaths on single rod probes cannot be used with Gas Group IIC or in Zone 0.
Do not install in a location where the electrostatic charge can increase. This includes:

- locations near ventilation systems,
- locations where there is a risk of an increase in electrostatic charge caused by compressed air and dust,
- locations near machines that use friction,
- locations near systems that apply electrons as a spray (e.g. near electrostatic painting systems), and
- locations near other machines and systems that can have large electrostatic charges.

Figure 2-1: ESD warning sticker (below the device nameplate)

1. Text: Plastic Parts
2. Text: Warning! Potential electrostatic hazard – see instructions

2.2 Operating conditions

2.2.1 Ambient and flange temperature

The equipment protection level and temperature class give the ambient temperature and related flange temperature ranges for the device.

**WARNING!**

The gasket temperature must be in the approved limits. For more data, refer to “Pressure and temperature ranges” in the Installation chapter of the handbook.

Definitions

Figure 2-2: Definitions

1. Compact version: Signal converter, process connection and probe
2. Remote [Field] version: remote converter
WARNING!
Compact version only: If the device is used in a potentially explosive atmosphere that contains dust, do not install the device on the side of the tank.

If the device must operate at a high process temperature, make sure that the maximum flange temperature and maximum ambient temperature are not more than the values given in the table.

INFORMATION!
If the device is equipped with the Metaglas® option or the Ø24/32 mm adaptor for the OPTIFLEX 1300 C, use the values that follow.

The temperature data that follows is applicable to devices that have the 4...20 mA passive - HART, PROFIBUS PA or FOUNDATION™ fieldbus output options.

**INFORMATION!**

Remote converter

The maximum ambient temperature, $T_a$, permitted depends on the temperature class:
- $T_a = +60\,^\circ\text{C}$ for class T6
- $T_a = +70\,^\circ\text{C}$ for class T5
- $T_a = +80\,^\circ\text{C}$ for class T4
### Remote (Field) version (probe housing only)

**INFORMATION!**

Remote converter

The maximum ambient temperature, $T_a$, permitted depends on the temperature class:
- $T_a = +60^\circ C$ for class T6
- $T_a = +70^\circ C$ for class T5
- $T_a = +80^\circ C$ for class T4

2.2.2 Maximum surface temperature of the housing for dust applications

**WARNING!**

*Ex ia and Ex d ia devices*

If the ambient and flange temperatures of the device are not more than values given in the table for devices that operate in Dust Zones, the surface temperature of the housing will not be more than +90°C / +194°F.

For more data, refer to the table for devices that operate in Dust Zones 20 and 21 in the "Ambient and flange temperature" section.

</tbody>
</table>
3.1 General notes

**WARNING!**
- De-energize the circuit.
- Use the applicable cable glands for the cable entry openings in the housing (M20×1.5 or ½ NPT). For the cable entry size, refer to the device nameplate.
- If ambient temperature >65°C / >149°F, use heat-resistant cables, cable glands and cable entry plugs certified for continuous operation above +80°C / +176°F.

3.2 Terminal compartment

3.2.1 How to open the terminal compartment

**WARNING!**
If dirt collects on the housing, clean the device with a damp cloth before you remove the terminal compartment cover.

How to open the Ex i terminal compartment

![Figure 3-1: How to open the Ex i terminal compartment](image)

How to open the Ex d terminal compartment

![Figure 3-2: How to open the Ex d terminal compartment](image)

1. Cover stop
2. Terminal compartment cover
Equipment needed (not supplied)

- For Ex i-approved devices: 3 mm Allen wrench.
- For Ex d-approved devices: 2.5 mm Allen wrench.

**INFORMATION!**

*Ex i applications*

If you remove the terminal compartment cover, the device has a degree of ingress protection IP20.

**WARNING!**

*Ex d applications*

Do not remove the terminal compartment cover while the electrical power is connected.

- De-energize the circuit.
- **Ex i-approved devices**: Remove the cover stop ①.
  - Use a 3 mm Allen wrench.
- **Ex d-approved devices**: After the time given in the table that follows, remove the cover stop ①.
  - Use a 2.5 mm Allen wrench.
- Remove the terminal compartment cover ②.

**Ex d ia-approved devices**

After the time given in the table, remove the cover:

<table>
<thead>
<tr>
<th>Temperature class</th>
<th>Waiting time before opening [minutes]</th>
</tr>
</thead>
<tbody>
<tr>
<td>T6, T5</td>
<td>10</td>
</tr>
<tr>
<td>T4, T3, T2</td>
<td>Not necessary</td>
</tr>
</tbody>
</table>

**3.2.2 How to close the terminal compartment**

*Ex i applications*

- Attach the terminal compartment cover ②. Turn the terminal compartment cover carefully to prevent damage to the thread and the gasket.
- Make sure that the terminal compartment cover is tight.
- Use a 3 mm Allen wrench to attach the cover stop ①.
- Make sure that the cover stop ① screw is tight.
DANGER!

Ex d applications
Make sure that the terminal compartment is correctly sealed. An explosion can cause death or injury to personnel and/or damage to equipment. Obey the instructions that follow:

- Attach the terminal compartment cover. Turn the terminal compartment cover carefully to prevent damage to the thread and the gasket.
- Make sure that the terminal compartment cover is tight.
- Use a 2.5 mm Allen wrench to attach the cover stop.
- Make sure that the cover stop screw is tight.

3.3 Terminal tightening capacity

The terminal tightening capacity for the current output terminal and the signal cable is:

<table>
<thead>
<tr>
<th>Output option</th>

</tbody>
</table>
3.4 Equipotential bonding system

**Compact version**
There is a terminal at the bottom of the converter that can be used as an equipotential bonding conductor. Connect the device to the equipotential bonding system for the hazardous location.

**Remote (Field) version**
There is a terminal on the wall support and a terminal at the bottom of the probe housing that can be used as equipotential bonding conductors. Connect the device to the equipotential bonding system for the hazardous location.

![Figure 3-3: Ex i applications: Terminals for the equipotential bonding system](image1)

![Figure 3-4: Ex d applications: Terminals for the equipotential bonding system](image2)
3.5 Ex ia equipment

3.5.1 How to connect the electrical cables

Refer to the handbook for data about the device terminals.

Cable glands are supplied on customer demand. If you supply the cable glands, this part must have a degree of ingress protection IP≥6X (IEC 60529). We recommend that you use a part that has a degree of ingress protection IP≥66. Make sure that the cable gland is sealed.

Obey the instructions that follow:

- Electrical wires must agree with applicable standards. For more data, refer to General notes on page 8 and the related NEPSI explosion protection certificates of conformity.
- Use the electrical connection procedure in the Handbook.
- Put the electrical wires down, set them in position, and safely attach them to prevent damage. The electrical wires must also be a sufficient distance from hot surfaces.
- Make sure that unused electrical wires are safely connected to the ground potential of the hazardous area. If this is not possible, make sure that each of the unused electrical wires are safely isolated (other electrical wires, ground etc.) and rated for a test voltage ≥500 V_{RMS}.
- If it is necessary, make sure the electrical wire insulation gives good protection from corrosion.
- Connect only to separate certified, intrinsically-safe circuits. Make sure that the electrical circuit characteristics are not more than the values that follow.
- Do not remove more than 6 mm / 0.2” of insulation from the wire.

3.5.2 Maximum intrinsically-safe values for the electrical circuit

3. Non-Ex zone
4. Ex zone
5. Resistor for HART® communication
6. Grounding wire - if the electrical cable is shielded (braided wire etc.). NOTE: Shielded electrical cable is mandatory for fieldbus output options.

Remote (Field) version
The signal cable (between the converter electronics and the probe electronics) is supplied by the manufacturer for NEPSI applications. The signal cable cannot be changed by the user. For more data, speak to the supplier.
3.6 Ex d ia equipment

3.6.1 General notes

Ex d ia-approved equipment have two separate compartments. The electronics in the electronics block compartment are Ex ia-approved and the terminals compartment is Ex d-approved.

Figure 3-7: Compact version: Compartments in Ex d ia-approved equipment

Figure 3-8: Remote (Field) version: Compartments in Ex d ia-approved equipment

1. Electronics block (Ex ia) compartment
2. Terminal (Ex d) compartment

INFORMATION!
For more data about the flamepath dimensions, speak or write to your supplier.
3.6.2 How to connect the electrical cables

Cable glands are supplied on customer demand. If you supply the cable glands, this part must have a degree of ingress protection IP ≥ 6X (IEC 60529).

**WARNING!**

*Use only Ex d-approved cable glands and plugs for Ex d applications.*

*Do not remove more than 6 mm / 0.2" of insulation from the wire.*

- Do not remove more than 6 mm / 0.2" of insulation from the wire.
- Connect the load resistor to the positive terminal of the power supply
- Ground the negative connection.
- If the load resistor has to be connected to the negative terminal, the loop resistance must not be more than 350 ohms.

**CAUTION!**

*4...20 mA passive - HART output option: Do not ground the positive connection.*

3.6.3 Supply voltage

**Level transmitter with the 4...20 mA output option**

<table>
<thead>
<tr>
<th>Entity</th>
<th>Minimum voltage at output terminal [VDC]</th>
<th>Maximum voltage at output terminal [VDC]</th>
</tr>
</thead>
<tbody>
<tr>
<td>Current output terminal</td>
<td>13.5 ①</td>
<td>36 ①</td>
</tr>
</tbody>
</table>

① For a current output of 22 mA

**Level transmitter with the PROFIBUS PA or FOUNDATION fieldbus output option**

<table>
<thead>
<tr>
<th>Output terminal</th>
<th>Minimum voltage at output terminal [VDC]</th>
<th>Maximum voltage at output terminal [VDC]</th>
</tr>
</thead>
<tbody>

<tr>
<td>FISCO</td>
<td>9</td>
<td>17.5</td>
</tr>
</tbody>
</table>

For more data, refer to *Maximum intrinsically-safe values for the electrical circuit* on page 20.

3.6.4 Electrical schematic

**DANGER!**

*Keep the grounding wire a minimum distance of 2 mm / 0.83" away from the output terminal.*

**CAUTION!**

*Make sure that you connect the load resistor to the positive side.*
Remote (Field) version

The signal cable (between the converter electronics and the probe electronics) is supplied by the manufacturer for NEPSI applications. The signal cable cannot be changed by the user. For more data, speak to the supplier.

Level transmitter with the 4...20 mA passive - HART output option

Figure 3-9: Electrical schematic for Ex d ia-approved equipment (with galvanic isolation)

Figure 3-10: Electrical schematic for Ex d ia-approved equipment (without galvanic isolation)

Level transmitter with the FOUNDATION™ fieldbus or PROFIBUS PA output option

Figure 3-11: Electrical schematic for Ex d ia-approved equipment with the FOUNDATION™ fieldbus or PROFIBUS PA output option

Remote (Field) version

The signal cable (between the converter electronics and the probe electronics) is supplied by the manufacturer for NEPSI applications. The signal cable cannot be changed by the user. For more data, speak to the supplier.
WARNING!
Make sure that it is safe to supply electrical power. Do a start-up check:

- Are the wetted components (gasket, flange and probe) resistant to corrosion by the tank product?
- Does the information given on the nameplate agree with the application?
- Did you connect the equipotential bonding system correctly?
- **Ex d applications**: Are the cable glands, plugs and adaptors Ex d-approved?
- **Ex ia applications**: Are you using an intrinsically-safe barrier within the correct parameters? For more data, refer to *Ex ia equipment* on page 20. The electrical circuit characteristics must not be more than the maximum intrinsically-safe values.
- Did you install the correct cable glands? Is the terminal compartment correctly sealed?
5.1 Periodic maintenance

No maintenance is necessary.

**INFORMATION!**
For more data about regular inspections and maintenance procedures for devices with Ex and other approvals, refer to the related supplementary instructions.

5.2 Keep the device clean

**DANGER!**
If dirt collects on the device, clean it with a damp cloth.

5.3 Manufacturer

This device is made by:

KROHNE S.A.S.
2 Allée des Ors – B.P. 98
26103 Romans-sur-Isère CEDEX
France

or

KROHNE Measurement Technology (Shanghai) Co., Ltd.
Minshen Road 555 Songjiang Industrial Zone
Shanghai 201612
China

If you need to return your device for inspection or repair, obey the instructions that follow.
5.4 Returning the device to the manufacturer

5.4.1 General information

This device has been carefully manufactured and tested. If installed and operated in accordance with these operating instructions, it will rarely present any problems.

**CAUTION!**
Should you nevertheless need to return a device for inspection or repair, please pay strict attention to the following points:

- Due to statutory regulations on environmental protection and safeguarding the health and safety of the personnel, the manufacturer may only handle, test and repair returned devices that have been in contact with products without risk to personnel and environment.
- This means that the manufacturer can only service this device if it is accompanied by the following certificate [see next section] confirming that the device is safe to handle.

**CAUTION!**
If the device has been operated with toxic, caustic, flammable or water-endangering products, you are kindly requested:

- to check and ensure, if necessary by rinsing or neutralising, that all cavities are free from such dangerous substances,
- to enclose a certificate with the device confirming that is safe to handle and stating the product used.
### 5.4.2 Form (for copying) to accompany a returned device

**CAUTION!**

To avoid any risk for our service personnel, this form has to be accessible from outside of the packaging with the returned device.
