Over 50 years of know-how in the water and wastewater industry. Now integrated in our online tender tool.

When planning new systems, fast and precise compilation of lists of products and services in the field of measurement technology always requires information that is up-to-date and complete. All too often, imprecise and outdated information wastes a lot of time and in some cases even leads to planning errors with critical consequences.

With the planning tool from KROHNE you are always on the safe side – with precise tender documents and useful additional features. Everything always completely up-to-date at:

Planning tool: 
Competent and precise

As the founder of electromagnetic flow technology for industrial use, we have been inspiring our customers in the water and wastewater industry for over 50 years with innovations that set the standard for the competition. Our offerings cover the entire range of measurement and analytical technology: from individual measurement parts to complete solutions. Now we would like to pass on this know-how to our customers in the form of a helpful online tender tool.

The KROHNE planning tool is custom-tailored precisely to the needs of systems planners and engineering firms responsible for the compilation of complete lists of goods and services in water and wastewater industry.

It offers unique advantages:

• No installation on the computer required
• Extremely user-friendly menu system
• 100% planning security thanks to the use of measurement devices optimized for the measurement points
• Listing of alternative possible device types and measurement processes as well as comprehensive detailed information
• Simple creation of tender documents combined with easy configuration of the measurement devices
• Downloading of tender documents as Word, Excel, or GAEB files
• Downloading of additional information: including data sheets, operating instructions, short-form descriptions, 2D and 3D CAD drawings in DWG and IGES formats, calculation software and certificates

You can get started right away with a free, personal introduction by a KROHNE employee. Of course, continuous assistance is also part of our service.

If you have further questions, do not hesitate to contact us:

Creating individualized tender documents is as easy as 1-2-3.

At www.planningtool.krohne.com, you get completely finished and formulated, provider-neutral tender documents with all the technical details – with just a few mouse clicks.

This not only speeds up the planning process; it also contributes to a substantially more harmonious system.

Step 1   Select the area to be planned and the measurement points

Step 2   Select the desired measurement device

Step 3   Configure the device/create the tender document
