Installation and operating instructions

BATCHFLUX 5015 K
Compact electromagnetic flowmeters

Please note!

Do not open the housing of the BATCHFLUX IFM 5015 K.

Danger of contamination with substances likely to destroy the moisture barrier of the electronic equipment (e.g. if CIP or SIP cleaned from the outside).

Therefore, please contact your KROHNE Service engineer before you open the housing.

Therefore, please contact your KROHNE Service engineer before you open the housing.
System description

The BATCHFLUX IFM 5015 K compact electromagnetic flowmeter is a precision instrument designed for the linear flow measurement of liquid products.

The products need to be electrically conductive:
> 5 µS/cm (except for water)
> 20 µS/cm (for water)

The full-scale range $Q_{100\%}$ can be set as a function of the meter size:

DN 2.5 – 40 and $\frac{1}{10}$” – $\frac{1}{4}$”

$Q_{100\%} = 0.0015$ - $15$ l/s

This is equivalent to a flow velocity of 0.3 - 12 m/s.

Standards and approvals

- BATCHFLUX IFM 5015 K with the IFC 015 signal converter meets the EU-EMC Directives and bears the CE and 3A symbol.
- The 3A approval accepts only adapters shown in Sect. 1.5.
- All factories and production sequences are ISO 9001 certified.

Product liability and warranty

The compact BATCHFLUX IFM 5015 K electromagnetic flowmeter is designed exclusively for measuring the volumetric flowrate of electrically conductive, liquid process products.

The compact flowmeter is not suitable for use in hazardous areas. Other flowmeter series are available for such applications.

Responsibility as to suitability and intended use of this compact electromagnetic flowmeter rests solely with the operator.

Improper installation and operation of the flowmeters (systems) may lead to loss of warranty.

In addition, the "General conditions of sale" forming the basis of the purchase contract are applicable.

If BATCHFLUX IFM 5015 K flowmeters need to be returned to KROHNE, please note the information given on the last-but-one page of these instructions. KROHNE regret that they cannot repair or check your flowmeter(s) unless these are accompanied by the completed form sheet.
**Functional description**

**BATCHFLUX IFM 5015 K**

The volume to be filled into the container is measured "in line" by means of the electromagnetic flowmetering system. The batch controller closes the filling valve once the preset filling volume has been reached. It is always the preset target volume that is filled into the container.

The signal converter converts the measured flowrate signal into volume pulses that are intelligible to the batch controller. For a filling volume of 1000 ml, for example, this could be 10 pulses per ml; in other words, the batch controller switches the valve off after 1000 pulses have been received.

The influence of valve closing times and other dynamic factors can be corrected by the adaptive corrector of the batch controller.

The use of state-of-the-art microprocessor electronics and the high-speed analog/digital converter also enables changes in the flowrate to be sensed precisely. This technology ensures high reproducibility and long-term stability.
Part A System installation and start-up

1 Installation in the pipeline

1.1 Important information

The following recommendations should be observed to ensure proper functioning of the flowmeter – PLEASE NOTE.

- **Measuring tube must be completed filled at all times.**
- **Direction of flow**: the red arrow on the housing of the primary head must point in the direction of flow. If for structural reasons the flowmeter can only be installed counter to the direction of flow, the direction of flow measurement can be reprogrammed.
- **Stud bolts and nuts**: to fit, make sure there is sufficient room next to the pipe flanges.
- **Vibration**: support the pipeline on both sides of the flowmeter. Vibration level to IEC 068-2-34: below 2.2g in the 20 - 2000 Hz frequency range.
- **Radiant heat**: avoid e.g. from hot product tanks, insulate if necessary.
- **Avoid strong electromagnetic fields** in vicinity of flowmeter.
- **Straight Inlet run** ≥ 5 x DN and **straight outlet run** ≥ 2 x DN, measured from the electrode axis (DN = meter size).
- **Vortex or corkscrew flow**: increase length of inlet and outlet runs or install flow straighteners.
- **Mixing different process liquids**: install flowmeter upstream of mixing point or at an adequate distance downstream, minimum of 30 x DN (DN = meter size), otherwise display may be unsteady.
- **Plastic pipes and internally coated metal pipes**: grounding rings required, see “Grounding”, Section 1.3.3.
- **Heat-insulated pipelines**: do not insulate flowmeter.
- **Zero setting**: not required. For checking purpose, see Section 7.1, it should be possible to set “zero” flow velocity in the completely filled measuring tube. Shut-off valves should therefore be provided either downstream or upstream and downstream of the flowmeter.
- **Ambient temperature** -25°C to +60°C
- **Process temperature** max. 140 °C
- **Transport and storage temperature** -25°C to +60°C

**Limits imposed by the material** used for the measuring tube for process temperature, thermal shock limit, pressure and vacuum, see Section 10.2 “Limits”.

**Please note!**
The ceramic measuring tube must not contact metal parts (flange, pipeline). This can destroy the flowmeter!
1.2 Suggestions for installation

¡ To avoid measuring errors due to air inclusion and vacuum, please observe the following:

**Highest point of pipe run**
(Air bubbles collect in measuring tube - faulty measurements!)

**Preferred locations**
Avoid draining or partial filling of the measuring tube. Faulty measurements.

**Horizontal pipe run**
Install in slightly descending pipe section to prevent air from collecting, so avoiding faulty measurements and that meter can drain.

**Control and shut-off valves:** always install behind the flowmeter

**Pumps**
Do not install flowmeter on pump suction side

**Open feed or discharge**
Install meter in low section of pipe

**Selecting the installation location**
Location and position as required, but electrode axis (X – – – – X) must be approximately horizontal in a horizontal pipe run.

**Direction of flow**
The red arrow on the primary head housing must point in the flow direction.

On high-temperature pipes and where process temperatures exceed 100 °C, provide facilities to compensate for longitudinal expansion on heat-up of the pipeline. Use flexible pipe elements (e.g. elbows).
1.3 Installation requirements

**Items supplied with flowmeter**
- BATCHFLUX IFM 5015 K compact flowmeter in the version as ordered
- Installation and operating instructions, as agreed
- Certificate of system calibration data (as agreed)

Excluding fitting accessories. Stud bolts, gaskets, etc., to be provided by customer. **All operating data and function values are factory set according to your order specifications.**

**Requirements**

**Use in the food industry**
The IFM 5015 K is specifically suitable for use in the food and beverage industry or similar sterile processes.
The IFM 5015 K is steam-resistant and can be pigged.
The measuring tube can be SIP or CIP cleaned when in installed condition. During the cleaning the meter(s) must be switched off to maintain the reliability of the unit(s).

- Operating pressure, type, and space between pipe flanges: see Table.
- Tighten stud bolts uniformly down to the metal stop in diagonally opposed sequence. See Table for type and number of stud bolts.
- Install meter vertically or in a slope due to its conical in/outlet.

On DN 15 (1/2") and DN 32 (1 1/4"), a BATCHFLUX with straight ceramic tube is available.

</tbody>
</table>
1.3.1 Position of flanges

Install flowmeter in line with the pipe axis. Pipe flange faces must be parallel to each other, max. allowable deviation:
\[ L_{\text{max}} - L_{\text{min}} \leq 0.5 \, \text{mm} \leq 0.02" \]

1.3.2 Example: centering and sealing the primary head

The primary head is centered between the pipe flanges with the aid of the precise geometric fitting (guide collar on primary head).

Detail drawings see Sect. 1.5.

1.3.3 Grounding

FE Functional ground, wire > 4 mm² Cu.
R Pipeline
RF Pipe flanges
V Interconnecting wires, bolted to the housing

- All flowmeters must be properly grounded.
- The grounding wire should not transmit any interference voltages. Therefore do not ground any other electrical device simultaneously with this conductor.

Grounding is carried out via the functional ground that is connected to the U-clamp terminal (9). See also Section 2 “Electrical connection”.

When connected to functional extra-low voltages, 24 V DC, protective separation (PELV) must be ensured (VDE 0100/VDE 0106 or IEC 364/IEC 536).
1.4 Installation of the primary head

1.4.1 Device description

- **BATCHFLUX IFM 5015 K**
  4 Cover, signal converter
  5 Primary head
  8 Connector for power and pulse output (optionally: and status output)
  9 U-clamp terminal for functional ground
  10 Fastening screws for cover
  11 Locating collar, primary head

- **Accessories from system manufacturer**
  12 O-ring gasket
  13 Special pipe flange
  14 Stud bolt with lock washer, plain washer and nut

To facilitate servicing of the primary head, please note the following points:

- It must be possible to shut off the flow through the pipeline upstream of the primary head (provide shutoff valve),
- Drain the pipe system before removing the primary head (provide drain valve),
- Support the pipeline on both sides of the flowmeter when located in a long, freely suspended section to facilitate removal of the primary head.

1.4.2 Installation of the IFM 5015 K

- Position gaskets (12) in the pipe flanges.
- Type and location of gaskets as specified by the manufacturer of the filling machine (see Sect. 1.3.2 “Centering of the primary head”).
- Insert primary head (5) between the pipe flanges (13) in line with the pipe axis.
- For spacing and location of the pipe flanges, see Sect. 1.3 “Position of flanges”.
- Press pipe flanges against flowmeter.

⚠️ Centering ring of pipe flanges must snap into place in the guide collar (11) of the primary head.

- Insert stud bolts (14) with washers into the holes in the pipe flanges. Fit nuts to stud bolts with lock washer.
- Tighten stud bolts and nuts down to the metal stop symmetrically. Check all bolts after starting up the pipe system, and retighten when any leaks show.
- Connect ground conductor to U-clamp terminal (9).
- Connect power supply and passive pulse output to connector plugs (7, 8) on signal converter housing (4).

See Section 2.2 and 2.3 for details of electrical connection.

2 Electrical connection

2.1 Important information

Be sure to take note of the following information in order to ensure proper functioning of the signal converter.

Please note:

1) Overvoltage class:
   In conformity with VDE 0120, equivalent to IEC 664, the compact flowmeters are designed for overvoltage category III in the supply circuits and overvoltage category II in the output circuits.

2) Safety isolation:
   The compact flowmeters must be provided with an isolating facility.

Electrical connection and repairs may only be carried out by qualified personnel.

- Protect the flowmeter from direct radiant heat (e.g. hot-product tanks), insulate if necessary.
- Do not expose flowmeter to intense vibration. If necessary, support the pipeline to the right and left of the flowmeter. Level of vibration in accordance with IEC 068-2-34: below 2.2g in the 20 - 2000 Hz frequency range.
- Note information given on the instrument nameplate, voltage.
- The FE functional ground for the supply power should for measurement reasons be connected to the separate U-clamp terminal on the signal converter housing.
- When connected to a functional extra-low voltage of 24 V DC, protective separation (PELV) must be ensured (VDE 0100 / VDE 0106 or IEC 364 / IEC 536 or equivalent national regulations).

</tbody>
</table>

Pin assignment

The pulse output is galvanically isolated from the 24 V power supply.

Pulse output

- All operating data and functions are settable (see Sect. 6).
- All data and functions are factory-set to your specifications. See also Sect. 3.2 “factory settings”.
- Connection of electronic totalizers.
- Digital pulse division. Interpulse period non-uniform, therefore if frequency meters or cycle counters connected, allow for minimum counting interval: counter gate time \[ t \] ≥ \[ \frac{1000}{P_{\text{max [Hz]}}} \]
- Pulse rate for \( Q = 100\% \) max. 10 kHz, fixed or optionally in pulses per \( m^3 \), litres, US gallons or user-defined unit
- Pulse width \( \leq 10 \text{ Hz}: \) 50, 100, 200 or 500 ms
  > 10 Hz:  - automatic, pulse width = \[ \frac{1}{2\times10^3}\% \]
  - symmetrical 1:1

U_{\text{ext}} \leq 30 \text{ V DC} / \leq 24 \text{ V AC}

I_{\text{max}} \leq 20 \text{ mA}
3 Start-up

Before powering the system, check that it has been correctly installed according to Sections 1 and 2.

The compact flowmeter is delivered ready for operational use. All operating data have been factory set in accordance with your specifications.

Power the unit, and the flowmeter will immediately start process flow measurement.

3.1 Check for availability

Please note!

Do not open the housing of the BATCHFLUX IFM 5015 K.

Danger of contamination with substances likely to destroy the moisture barrier of the electronic equipment (e.g. if CIP or SIP cleaned from the outside).

Therefore, please contact your KROHNE Service engineer before you open the housing.

- The measurement status is signalled by the light-emitting diodes (LED) below the cover of the converter housing (see amplifier board on right).

<table>

</tr>
</tbody>
</table>

- Refer to Section 6 for operator control.

Furthermore, external facilities (hand-held communicator HHT 010, PC, etc.) can be connected on the pc board of the control electronics via the IMoCom interface. This will enable precise checking of the correct mode of operation of the Batchflux IFM 5015 K.

All operating data can be set and stored by means of a personal computer via the IMoCom interface. The digital IMoCom interface allows the complete filling procedure to be graphically represented on the PC, thus providing visualization of system and valve properties.
3.2 Factory settings

All operating data are factory-set according to your order specifications.

To facilitate easy and rapid initial start-up, pulse output is - unless specified otherwise - set to process flow measurement in "2 flow directions" so that the current flowrate is displayed and the volumetric flow counted independent of the direction of flow.

The factory setting for the current and pulse outputs may occasionally cause measuring errors, particularly in the case of volume flow counting. For example, if pumps are switched off and a "backflow" occurs that is not within the range of the low-flow cutoff (SMU), or if separate displays and counts are required for both flow directions. To avoid faulty measurements, therefore, it may be necessary to change the factory setting of some or all of the following functions:

- low-flow cutoff SMU, Fct. 1.3
- pulse output P, Fct. 1.6

Table of standard factory settings

Part B  IFC 015 signal converter

4  Operator control of signal converter with HHT 010 (option)

4.1  Operator control concept

Please note!
Do not open the housing of the BATCHFLUX IFM 5015 K.
Danger of contamination with substances likely to destroy the moisture barrier of the electronic
equipment (e.g. if CIP or SIP cleaned from the outside).
Therefore, please contact your KROHNE Service engineer before you open the housing.

4.2 Operating and check elements

The following operating elements are featured on the hand-held communicator HHT 010:

Display, 1st line
Display, 2nd line
Display, 3rd line: arrows to identify display

Flowrate  current flowrate
Totalizer  + totalizer
          – totalizer
∑   sum totalizer (+ and –)

Overrange  I overranging, current output
            P overranging, pulse output P

Keys for operator control of signal converter

Compass field, signals actuation of a key

4.3 Function of the keys

The cursor, flashing part of display, has a grey background in the following descriptions.

To start operator control

Measuring mode

```
<table>
<thead>
<tr>
<th>Function</th>
<th>Display</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Flowrate</td>
<td>190.47</td>
<td>m³/hr</td>
</tr>
<tr>
<td>Totalizer</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Overrange</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
```

Operator control mode

```
<table>
<thead>
<tr>
<th>Function</th>
<th>Display</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Fct. 1.0</td>
<td>OPERATION</td>
<td></td>
</tr>
</tbody>
</table>
```

PLEASE NOTE: when “YES” is set under Fct. 3.4 ENTRY CODE, “CodE 1     - - - - - - - - - ” appears in the display after pressing key → .

Now enter the 9-keystroke Entry Code 1: → → → ↓ ↓ ↑ ↑ ↑ (each keystroke acknowledged by “*”).

To terminate operator control

Press key ↓ repeatedly until one of the following menus Fct. 1.0 OPERATION, Fct. 2.0 TEST or Fct. 3.0 INSTALL, is displayed.

Press key ↓

```
<table>
<thead>
<tr>
<th>Function</th>
<th>Display</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Fct. 3.0</td>
<td>INSTALL.</td>
<td></td>
</tr>
</tbody>
</table>
```

Store new parameters:

Confirm by pressing key ↓ . Measuring mode continued with the new parameters.

Do not store new parameters:

Press key ↑ to display “STORE.NO”. Measuring mode continued with the “old” parameters after pressing key ↓ .
**To change numbers**

**Increase number**

3 9 7.3 5
\[ m^3 / h r \]

\[ \uparrow \rightarrow \]

3 9 7.4 5
\[ m^3 / h r \]

**Decrease number**

**To shift cursor** *(flashing position)*

**Shift to right**

\[ \text{T I M E C O N S T .} \]
### Abbreviations used

- **DN** Nominal size, meter size
- **$F_{\text{max}}$** Highest frequency of the pulse output
- **$F_{\text{min}}$** Lowest frequency of the pulse output
- **$F_M$** Conversion factor volume for any unit, see Fct. 3.5 "FACT.VOL."
- **$F_r$** Conversion factor time for any unit, see Fct. 3.5 "FACT.TIME"
- **GKL** Primary constant
- **I** Current output (no HARDWARE)
- **P** Pulse output
- **P_{\text{max}}** $= \frac{F_{\text{max}}}{Q_{100\%}}$
- **P_{\text{min}}** $= \frac{F_{\text{min}}}{Q_{100\%}}$
- **Q** Actual flow rate
- **Q_{100\%}** 100% flow = full-scale range
- **Q_{\text{max}}** $= \frac{\pi}{4} \ DN^2 \times v_{\text{max}}$ / max. full-scale range ($Q_{100\%}$) at $v_{\text{max}} = 12$ m/s
- **Q_{\text{min}}** $= \frac{\pi}{4} \ DN^2 \times v_{\text{min}}$ / min. full-scale range ($Q_{100\%}$) at $v_{\text{min}} = 0.3$ m/s
- **S** Status output (no HARDWARE)
- **SMU** Low-flow cutoff for I and P
- **v** Flow velocity
- **v_{\text{max}}** Max. flow velocity (12 m/s) at $Q_{100\%}$
- **v_{\text{min}}** Min. flow velocity (0.3 m/s) at $Q_{100\%}$
- **F/R** Forward/reverse flow in F/R mode

### Fct. Text Description and settings

<table>
<thead>
<tr>
<th>Fct.</th>
<th>Text</th>
<th>Description and settings</th>
</tr>
</thead>
<tbody>
<tr>
<td>1.0</td>
<td>OPERATION</td>
<td>Operations menu</td>
</tr>
</tbody>
</table>
| 1.1  | FULL.SCALE | Full-scale range for flowrate $Q_{100\%}$  
Select unit  
- $\text{m}^3/\text{hr}$  
- $\text{Liter/Sec}$  
- $\text{US.Gal/min}$  
- user unit, factory set is “Liter/hr” (see Fct. 3.5)  
Press key $\rightarrow$ to transfer to number setting!  
Setting ranges  
The ranges are dependent on the meter size (DN) and the flow velocity ($v$):  
$Q_{\text{min}} = \frac{\pi}{4} \ DN^2 \times v_{\text{min}}$  
$Q_{\text{max}} = \frac{\pi}{4} \ DN^2 \times v_{\text{max}}$  
- BATCHFLUX IFM 5015 K:  
  - 0.0053 – 54 m$^3$/hr  
  - 0.0015 – 15 Liter/Sec  
  - 0.02377 – 237.7619 US.Gal/min  
Press key $\downarrow$ to return to Fct. 1.1 FULL SCALE. |
| $\rightarrow$ VALUE P | | Change pulse value  
(see Fct. 1.6 "VALUE P")  
Appears only when "PULSE/VOL." set under Fct. 1.6 "SELECT. P" and the output frequency (F) has been over- or undershot:  
$P_{\text{min}} = F_{\text{min}} / Q_{100\%}$  
$P_{\text{max}} = F_{\text{max}} / Q_{100\%}$ |
| 1.2  | TIME CONST. | Time constant  
Selection:  
- ALL (applies to display and all outputs)  
- ONLY I+S (display, current and status outputs only, no current output)  
Press key $\downarrow$ to transfer to number setting!  
Range:  
- 0.2 – 99.9 Sec  
Press key $\downarrow$ to return to Fct.1.2 TIMECONST. |
### 1.3 L.F. CUTOFF
**Low-flow cutoff (SMU)**
- **OFF** (fixed values: ON = 0.1%, OFF = 0.2%, at 100 Hz - 1000 Hz, see Fct.1.6, 1% and 2%)
- **PERCENT** (variable values)
  - ON: 1 – 19%
  - OFF: 2 – 20%

- Press key \( \rightarrow \) to transfer to number setting!
- Note: cutoff “off” value must be greater than cutoff “on” value!
- Press key \( \downarrow \) to return to Fct. 1.3 L.F.CUTOFF

### 1.4 DISPLAY
**Display functions**
- \( \rightarrow \) **DISP. FLOW.**
  - Select flow display (only HHT 010)
    - NO DISP.
    - user unit, factory set is “Liter/hr” (see Fct. 3.5)
    - \( \text{m}^3/\text{hr} \)
    - PERCENT
    - Liter/Sec • US.Gal/min
    - BARGRAPH (value and bargraph display in %)

- Press key \( \downarrow \) to transfer to subfunction “DISP.TOTAL”.
- \( \rightarrow \) **DISP. TOTAL.**
  - Select totalizer display
    - NO DISP.
    - (totalizer switched on but not displayed)
    - OFF (totalizer switched off)
    - \( \text{m}^3 \)
    - Liter • US.Gal
    - user unit, factory set is “Liter” (see Fct. 3.5)

- Press key \( \rightarrow \) to transfer to format setting!
- Format setting
  - **Auto** (exponent notation)
  - . 1000000 • 1000000 • .
  - \( \# . 1000000 \)
  - \( \# . 1000000 \)
  - \( \# . 1000000 \)

- Press key \( \downarrow \) to transfer to subfunction “DISP.MSG.”.
- \( \rightarrow \) **DISP. MSG.**
  - Additional messages required in measuring mode?
    - NO • YES
  - (cyclic change with meas. value displays)

- Press key \( \downarrow \) to return to Fct. 1.4 DISPLAY.

### 1.5 CURRENT I
**Current output I**
- No hardware available

### 1.6 PULS.OUTP. P
**Pulse output P**
- \( \rightarrow \) **FUNCTION P**
  - Select function for pulse output P
    - OFF (switched off)
    - 1 DIR.
      - (1 direction of flow)
    - 2 DIR.
      - (forward/reverse flow, F/R flow measurement)

- Press key \( \downarrow \) to transfer to subfunction “SELECT P”.
- \( \rightarrow \) **SELECT. P**
  - Select pulse type
    - 100-1000 Hz • PULSE/VOL
      - (pulses per unit volume, flow)
    - 100-1000 Hz • PULSE/TIME
      - (pulses per unit time for 100% flow)

- When 100 Hz - 1000 Hz selected, return to Fct.1.6 PULS.OUTP. P, (pulse width 50%, cyclic).
- \( \rightarrow \) **PULSWIDTH**
  - Select pulse width
    - 50 mSec • 100 mSec
    - 200 mSec • 500 mSec

- Press key \( \downarrow \) to transfer to subfunction “VALUE P”: 
### Fct. 1.6 VALUE P

**Description and settings**

Set pulse value per unit volume (appears only when “PULSE/VOL.” set under “SELECT.P” above)
- xxxx Puls/lm3
- xxxx Puls/Liter
- xxxx Puls/US.Gal
- xxxx Puls/ user unit, factory set is “Liter” (see Fct. 3.5)

Setting range “xxxx” depends on the pulse width and the full-scale range:

- \[ P_{\text{min}} = \frac{F_{\text{min}}}{Q_{100\%}} \]
- \[ P_{\text{max}} = \frac{F_{\text{max}}}{Q_{100\%}} \]

Press key ↵ to return to Fct. 1.6 “PULS.OUTP.P”.

### Fct. 1.7 STATUS. S

**Description and settings**

Status output S

No hardware available

### Fct. 2.0 TEST

**Description and settings**

Test menu

### Fct. 2.1 TEST Q

**Description and settings**

Test of range Q

Precautionary query

- SURE NO
  - Press key ↵ to return to Fct. 2.1 “TEST Q”.

- SURE YES
  - Press key ↵ and select value with keys ↑↓:
    - -110 / -100 / -50 / -10 / 0 / +10 / +50 / +100 / +110 PCT.
    - of set measuring range \( Q_{100\%} \) in each case.
    - Displayed value present at outputs I and P.

Press key ↵ to return to Fct. 2.1 “TEST Q”.

### Fct. 2.2 HARDW. INFO

**Description and settings**

Hardware information and error status

Please note down all 6 codes before consulting factory.

- **MODUL ADC**
  - X.XXXXX .X X YYYYYYYYY Y
  - Press key ↵ to transfer to “MODUL I/O”.

- **MODUL I/O**
  - X.XXXXX .X X YYYYYYYYY Y
  - Press key ↵ to transfer to “MODUL DISP”.

- **MODUL DISP.**
  - X.XXXXX .X X YYYYYYYYY Y
  - Press key ↵ to return to Fct. 2.2 “HARDW. INFO”.

### Installation and Operating Instructions 23BATCHFLUX

#### 3.0 INSTALL.

**Installation menu**

#### 3.1 LANGUAGE

Select language for display texts
- GB / USA (English)
- F (French)
- D (German)
- Others on request

Press key ↓ to return to Fct. 3.1 “LANGUAGE”.

#### 3.2 FLOW-METER

Set data for primary head

### FIELD FREQ.

Magnetic field frequency

Do not change setting!

Values 1/2, 1/6 and 1/18 of 50 Hz or 60 Hz, see nameplate.

Press key ↓ to transfer to subfunction “FLOW DIR.”.

### FLOW DIR.

Define direction of flow

(in F/R mode: forward flow)

Set according to direction of arrow on primary head.

* + DIR.  * – DIR.

Select with key ↑ or ↓.

Press key ↓ to return to Fct. 3.2 “FLOWMETER”.

### FIELD FREQ.

Magnetic field frequency

Do not change setting!

Values 1/2, 1/6 and 1/18 of 50 Hz or 60 Hz, see nameplate.

Press key ↓ to transfer to subfunction “FLOW DIR.”.

### FLOW DIR.

Define direction of flow

(in F/R mode: forward flow)

Set according to direction of arrow on primary head.

* + DIR.  * – DIR.

Select with key ↑ or ↓.

Press key ↓ to return to Fct. 3.2 “FLOWMETER”.

5 Description of functions

Please note!

Do not open the housing of the BATCHFLUX IFM 5015 K.

Danger of contamination with substances likely to destroy the moisture barrier of the electronic equipment (e.g. if CIP or SIP cleaned from the outside).

Therefore, please contact your KROHNE Service engineer before you open the housing.

5.1 Full-scale range $Q_{100\%}$

Fct. 1.1 FULL SCALE

Press key $\rightarrow$.

Selection of unit for full-scale range $Q_{100\%}$

- $m^3/hr$ (cubic metres per hour)
- Litre/Sec (litres per second)
- US.Gal/min (US gallons per minute)
- User-defined unit; factory-set is here "Liter/hr" (litres per hour), see Sect. 5.12

Select with keys $\uparrow$ and $\downarrow$. Use key $\rightarrow$ to transfer to numerical setting, 1st digit (cursor) flashes.

Set full-scale range $Q_{100\%}$

The setting range is dependent on the meter size (DN) and the flow velocity ($v$):

$Q_{\text{min}} = \frac{\pi}{4} DN^2 \times v_{\text{min}}$
$Q_{\text{max}} = \frac{\pi}{4} DN^2 \times v_{\text{max}}$

(refer to flow table in Sect. 10.1)

Change flashing digit (cursor) with keys $\uparrow$ and $\downarrow$. Use keys $\rightarrow$ and $\leftarrow$ to shift cursor 1 place to right or left.

Press key $\downarrow$ to return to Fct. 1.1 FULL SCALE.

Note: if "VALUE P" is displayed after pressing key $\downarrow$. PULSE/VOL is set under Fct. 1.6 PULS.OUTP. P, subfunction "SELECT P". Due to the changed full-scale range $Q_{100\%}$, the output frequency (F) of the pulse output is over- or undershot:

$P_{\text{min}} = \frac{F_{\text{min}}}{Q_{100\%}}$
$P_{\text{max}} = \frac{F_{\text{max}}}{Q_{100\%}}$

Change pulse value accordingly, see Sect. 5.7 pulse output P, Fct. 1.6.

5.2 Time constant

Fct. 1.2 TIMECONST.

Press key $\rightarrow$.

Selection

- ALL (applies to HHT 010-display and all outputs)
- ONLY I + S (only valid for HHT 010 display, current and status outputs, no current output, no hardware)

Select with keys $\uparrow$ and $\downarrow$. Transfer to number setting with key $\downarrow$, 1st digit (cursor) flashes.

Set numerical value

- 0.2 - 99.9 Sec (seconds)

Change flashing digit (cursor) with keys $\uparrow$ and $\downarrow$. Use keys $\rightarrow$ and $\leftarrow$ to shift cursor 1 place to right or left.

Press key $\downarrow$ to return to Fct. 1.2 TIMECONST.

5.3 Low-flow cutoff

Fct. 1.3 L.F.CUTOFF (do not change setting)

Press key $\downarrow$.

Selection

- OFF (fixed trip points: ON = 0.1 % / OFF = 0.2 %, at 100 - 1000 Hz, see Fct.1.6, 1% and 2%)
- PERCENT (variable trip points: ON = 1-19% /OFF = 2-20%)

Select with keys $\uparrow$ and $\downarrow$. Transfer to number setting with key $\rightarrow$ (only when "PERCENT" selected), 1st digit (cursor) flashes.

Setting the numerical value when "PERCENT" selected

- 01 to 19 (cutoff "on" value, left of hyphen)
- 02 to 20 (cutoff "off" value, right of hyphen)

Change flashing digit (cursor) with keys $\uparrow$ and $\downarrow$. Shift cursor 1 place to right or left with keys $\rightarrow$ and $\leftarrow$. Press key $\downarrow$ to return to Fct. 1.3 L.F.CUTOFF.

Note: the cutoff "off" value must be greater than the cutoff "on" value.
5.4 Display with HHT 010

Fct. 1.4 DISPLAY

Press key ↓.

→ DISP.FLOW = Select unit for display of flowrate, press key ↓.

- NO DISP. (not displayed)
- m³/hr (cubic metres per hour)
- Liter/Sec (litres per second)
- US.Gal/min (US gallons per minute)
- User-defined unit: factory-set is “Liter/hr” (litres per hour), see Sect. 5.12
- PERCENT (percentage display)
- BARGRAPH (numerical value and bar graph display in %)

Select with keys ↑ and ↓. Press key ↓ to transfer to subfunction “DISP.FLOW”.

→ DISP.COUNT = Select unit for totalizer display, press key ↓.

- NO DISP. (not displayed)
- OFF (internal totalizer switched off)
- m³ (cubic metres)
- Liter (litres)
- US.Gal (US gallons)
- User-defined unit: factory-set is “Liter”, see Sect. 5.12

Select with keys ↑ and ↓. Press key ↓ to transfer to subfunction “DISP.COUNT”.

Setting of totalizer format
- Auto (exponent notation)
- #. # . ###
- ##. ##. ##
- ###. ###. #
- ####. ####

Select with keys ↑ and ↓. Transfer to subfunction “DISP.MSG.” with key ↓.

Note: “BUSY” is displayed in the measuring mode when all displays are set to “NO DISP.” and “NO”. Sequencing of displays is automatic. However, in the measuring mode, manual sequencing can be carried out with keys ↑ and ↓. Return to automatic sequencing after approx. 3 minutes.

Please refer to Sect. 3.2 “Factory settings”.

5.5 Internal electronic totalizer

The internal electronic totalizer counts in m³, regardless of the unit set under Fct. 1.4, subfunction “DISP.FLOW”.

The counting range is dependent upon the meter size and has been selected such that the totalizer will count for a minimum of 1 year without overflow:

<table>
<thead>
<tr>
<th>Meter size</th>
<th>Counting range</th>
</tr>
</thead>
<tbody>
<tr>
<td>DN mm</td>
<td>inches</td>
</tr>
<tr>
<td>2.5 - 40</td>
<td>1/10 - 1 1/2</td>
</tr>
</tbody>
</table>

Only part of the totalizer count is shown in the display because it is not possible to output a 14-digit number. Unit and format of the display are freely selectable, see Fct. 1.4, subfunction “DISP.COUNT” and Sect. 5.4. This determines which part of the count is to be displayed.

Display overflow and totalizer overflow are independent of one another.

Example

Internal count: 0000123.7654321 m³
Format, display unit: XXXX.XXXX Liter
Internal count in unit: 0123765.4321000 Liter
Displayed: 3765.4321 Liter
### 5.6 Current output I

**No HARDWARE!**

Function must be set to “OFF”.

#### Fct. 1.5 CUR.OUTP. I

- **FUNCTION I** = Select function for the current output, press key →.
  - **OFF** (switched off, no function)
  - **1 DIR.** (1 flow direction)
  - **2 DIR.** (2 flow directions, F/R mode, forward/reverse)

Select with keys ↑ and ↓.

Transfer to subfunction “RANGE I” with key ↵.

*Exception:* when “OFF” selected, return to Fct. 1.5 CUR.OUTP. I.

### 5.7 Pulse output P

**Fct. 1.6 PULS.OUTP. P**

Press key →.

#### → FUNCTION P = Select function for the pulse output, press key →

- **OFF** (switched off, no function)
- **1 DIR.** (1 flow direction)
- **2 DIR.** (2 flow directions, F/R mode, forward/reverse)

Select with keys ↑ and ↓.

Transfer to subfunction “SELECT P” with key ↵.

*Exception:* when “OFF” selected, return to Fct. 1.6 PULS.OUTP. P.

#### → SELECT P = Select pulse type, press key →

- **100-1000 Hz**
- **PULSE/VOL.** (pulses per unit volume, flow)
- **PULSE/TIME** (pulses per unit time for 100 % flow)

Select with keys ↑ and ↓.

Transfer to subfunction “PULSEWIDTH” with key ↵.

*Note:* when 100-1000 Hz selected, return to Fct. 1.6 PULS.OUTP. P.

#### → PULSEWIDTH = Select pulse width, press key →

- **50 mSec** $F_{\text{max}} = 10$ Hz
- **100 mSec** $F_{\text{max}} = 5$ Hz
- **200 mSec** $F_{\text{max}} = 2.5$ Hz
- **500 mSec** $F_{\text{max}} = 1$ Hz

*for all* $F_{\text{min}} = 0.0056$ Hz

(= 20 pulses / hr)

Select with keys ↑ and ↓.

Transfer to subfunction “VALUE P” with key ↵ or return to Fct. 1.6 PULS.OUTP. P, depending on selected pulse type in subfunction “SELECT P”.

---

Please refer to Sect. 3.2 “Factory settings”.

Refer to Sect. 2.3 for connection diagrams, and to Sect. 5.14 for characteristics.
→ **VALUE P** = *Set pulse value per unit volume*,
(appears only when “PULSE/VOL.” has been set under “SELECT P”)
- XXXX PulS/m
- XXXX PulS/Liter
- XXXX PulS/US.Gal
- XXXX PulS/ user-defined unit,
  factory-set is “Liter”, see Sect. 5.12.

Select with keys ↑ and ↓.
Transfer to number setting with key →, 1st digit (cursor) flashes.

Set numerical value
- XXXX (Setting range depends on pulse width and full-scale range:
  \[ \begin{align*}
P_{\text{min}} &= \frac{F_{\text{min}}}{Q_{100\%}} \\
P_{\text{max}} &= \frac{F_{\text{max}}}{Q_{100\%}}
\end{align*} \]

Change flashing digit (cursor) with keys ↑ and ↓,
Shift cursor 1 place to right or left with keys → und ←.
Press key ↵ to return to Fct. 1.6 PULS.OUTP. P.

or

→ **VALUE P** = *Set pulse value per unit time*,
(appears only when “PULSE/TIME” has been set under “SELECT P”),
press key →
- XXXXX PulSe/Sec (max. 10 kHz)
- XXXX PulSe/min
- XXXX PulSe/hr
- XXXX PulSe/ user-defined unit,
  factory-set is “hr”, see Sect. 5.12.

Select with keys ↑ and ↓.
Transfer to number setting with key →, 1st digit (cursor) flashes.

Set numerical value
- XXXX (Setting range depends on pulse width)

Change flashing digit (cursor) with keys ↑ and ↓,
Shift cursor 1 place to right or left with keys → and ←.
Press key ↵ to return to Fct. 1.6 PULS.OUTP. P.

Please refer to Sect. 3.2
“Factory settings”

Refer to Sect. 2.3 for connection diagrams,
and to Sect. 5.14 for characteristics.
5.8 Status output S (option)

No HARDWARE!
Function must be set to “OFF”.

5.9 Language

Fct. 3.1 LANGUAGE
Press key →.

Select language for texts in display
• D (German)
• GB (English)
• F (French)
• others available on request

Select with keys ↑ and ↓.
Press key ↓ to return to Fct. 3.1 LANGUAGE.
5.10 Entry Code

Fct. 3.4 ENTRY CODE
Press key → .

Selection
• NO (no code, press key → to enter setting mode)
• YES (enter setting mode with key → and Code 1: → → ↓ ↓ ↑ ↑)

Select with keys ↑ and ↓.
Press key ↓ to return to Fct. 3.4 ENTRY CODE.

5.11 Primary head

Fct. 3.2 FLOWMETER
Press key → .

→ DIAMETER = Set the meter size
(see instrument nameplate) press key → .
Select size from table of meter sizes:
• BATCHFLUX IFM 5015 K : DN 2.5 - 40 mm equivalent to 1/10 - 1 1/2 inches
Select with keys ↑ and ↓.
Transfer to subfunction "FULL SCALE" with key ↓.

→ FULL SCALE = Set the full-scale range, press key → .
Set as described in Sect. 5.1.
Transfer to subfunction "GKL VALUE" with key ↓.

Note: if “VALUE P” is displayed after pressing key ↓, PULSE/VOL. has been set under Fct. 1.6 PULS.OUTP. P, subfunction "SELECT P". Because the full-scale range Q100% has been changed, the output frequency (F) of the pulse output is over- or undershot:

\[
\begin{align*}
P_{\text{min}} &= \frac{F_{\text{min}}}{Q_{100}} \\
P_{\text{max}} &= \frac{F_{\text{max}}}{Q_{100}}
\end{align*}
\]
Change pulse value accordingly, see Sect. 5.7 Pulse output P, Fct. 1.6.

→ GKL VALUE = Set the primary constant GK, press key → .
• 1.0000 - 9.9999 (note information on instrument nameplate, do not change setting!)
Change flashing digit (cursor) with keys ↑ and ↓. Shift cursor 1 place to right or left with keys → and ←.
Transfer to subfunction "FLOW DIR." with key ↓.

→ FIELD FREQ. = Magnetic field frequency, press key → .
• 1/2 (1/2, 1/6 or 1/18 or 50 Hz or 60 Hz, • 1/6 see instrument nameplate, • 1/18 do not change setting!)
The magnetic field frequency is determined by the program.
Select with keys ↑ and ↓.
Transfer to subfunction "FLOW DIR." with key ↓.

→ FLOW DIR. = Set the direction of flow, press key → .
• + DIR. (for identification of flow direction see "+" arrow on primary head, in F/R mode this identifies the "positive" flow direction)
Select with keys ↑ and ↓.
Press key ↓ to return to Fct. 3.2 FLOWMETER.

Zero check: see Fct. 3.3 and Sect. 7.1.

Please refer to Sect. 3.2 "Factory settings"
5.12 User-definable unit

Fct. 3.5 USER UNIT

Press key → .

→ TEXT VOL. = Set the text for user-defined flow unit, press key → .
  • Liter (max. 5 characters, factory-set is "Liter") Characters assignable to each place: A-Z, a-z, 0-9, or "—" (= blank)

Change flashing place (cursor) with keys ↑ and ↓. Shift cursor 1 place to right or left with keys → and ←. Transfer to subfunction "FACT.VOL." with key ↵.

→ FACT. VOL. = Set factor FM for volume, press key → .
  • 1.00000 E+3 (factory-set is "1000" / Factor FM = volume per 1 m³) Setting range: 1.00000 E-9 to 9.99999 E+9
  ( = 10⁻⁹ to 10⁻⁹)

Change flashing place (cursor) with keys ↑ and ↓. Shift cursor 1 place to right or left with keys → and ←. Transfer to subfunction "TEXT Vol." with key ↓.

→ TEXT TIME = Set text for required time, press key → .
  • hr (max. 3 places, factory-set is "hr = hour")

Characters assignable to each place: A-Z, a-z, 0-9, or "—" (= blank)

Change flashing place (cursor) with keys ↑ and ↓. Shift cursor 1 place to right or left with keys → and ←. Transfer to subfunction "FACT.TIME." with key ↓.

→ FACT. TIME = Set factor FT for time, press key → .
  • 3.60000 E+3 (factory-set is "3600" / set Factor FT in seconds)

Setting range: 1.00000 E⁻⁹ to 9.99999 E⁻⁹
( = 10⁻⁹ to 10⁻⁹)

Change flashing place (cursor) with keys ↑ and ↓. Shift cursor 1 place to right or left with keys → and ←. Press key ↓ to return to Fct. 3.5 USER UNIT.

Factors for volume FM (Factor FM = volume per 1 m³)

5.13 F/R mode, forward / reverse flow measurement

- Refer to Sect. 2.3 for electrical connection of the outputs.
- Define direction of forward (normal) flow, see Fct. 3.2, subfunction “FLOW DIR.”:
  in conjunction with F/R operation, set the direction for the forward flow here.
  “+” signifies the same direction as shown by the arrow on the primary head, “-”
signifies the opposite direction.
- Set the status indication output to “F/R INDIC.”, see Fct. 1.7.
- Set the current and / or pulse output to “2 DIR.”, see Fct. 1.5 and 1.6, subfunctions
  “FUNCTION I” and “FUNCTION P”.

Part C Special applications, functional checks and service

6 Special applications

Please note!

Do not open the housing of the BATCHFLUX IFM 5015 K.

Danger of contamination with substances likely to destroy the moisture barrier of the electronic equipment (e.g. if CIP or SIP cleaned from the outside).

Therefore, please contact your KROHNE Service engineer before you open the housing.

6.1 RS 232 adapter and KROHNE software (option)

For operator control of the signal converter with MS-DOS PC, an RS 232 adapter (on request, with Imo monitor software) is available as an option. Detailed directions for use of the software are included.

Switch off power source before opening the housing!

1) Detach the 4 hex. screws and remove cover.
2) Plug the RS 232 adapter into the IMoCom jack on the printed circuit board of the signal converter (see Sect. 9), and connect to PC or laptop.
3) Switch on the power.
4) As described in the CONFIG directions, change data, parameters and measured values and/or have them called up for display.
5) Switch off the power.
6) Remove the RS 232 adapter from the amplifier board.
7) Replace the cover and tighten down the 4 screws.

Please refer to Sect. 3.2 “Factory settings”.

6.2 Operation via HHT 010 handheld terminal (option)

The HHT 010 hand-held terminal is available as an option for operation of the signal converter.

Switch off power source before opening the housing!

1) Detach the 4 hex. screws and remove cover.
2) Plug the HHT 010 connector into the IMoCom jack on the printed circuit board of the signal converter, see Sect. 9.
3) Power the unit.
4) Change data, parameters and measured values as described in Sect. 4 and 5 of these Instructions, and display.
5) Disconnect from power.
6) Detach HHT connector from the mother board.
7) Replace cover and tighten down the 4 screws with a torque of max. 2 Nm.

Please refer to Sect. 3.2 “Factory settings”.
7 Functional checks

7.1 Zero check with signal converter IFC 015

Please note!

Do not open the housing of the BATCHFLUX IFM 5015 K.

Danger of contamination with substances likely to destroy the moisture barrier of the electronic equipment (e.g. if CIP or SIP cleaned from the outside).

Therefore, please contact your KROHNE Service engineer before you open the housing.

Switch off power source before opening the housing

- Set “zero” flow in the pipeline, but make sure that the measuring tube is completely filled with fluid.
- Switch on the system and wait 15 minutes.
- Press the following keys for zero measurement

<table>
<thead>
<tr>
<th>Key</th>
<th>Displayed</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>→</td>
<td>Fct. 1.0 OPERATION</td>

7.2 Test of measuring range Q, Fct. 2.1

Please note!

Do not open the housing of the BATCHFLUX IFM 5015 K.

Danger of contamination with substances likely to destroy the moisture barrier of the electronic equipment (e.g. if CIP or SIP cleaned from the outside).

Therefore, please contact your KROHNE Service engineer before you open the housing.

Switch off power source before opening the housing

- For this test a measured value can be simulated in the range of -110 to +110 percent of Q100% (for set full-scale range see Fct. 1.1 FULL SCALE).
- Power the system.
- Press the following keys for this test:

<table>
<thead>
<tr>

Current, pulse and status outputs indicate the corresponding values.
Select with keys ↑ and ↓.
7.3 Hardware information and error status, Fct. 2.2

Please note!

Do not open the housing of the BATCHFLUX IFM 5015 K.

Danger of contamination with substances likely to destroy the moisture barrier of the electronic equipment (e.g. if CIP or SIP cleaned from the outside).

Therefore, please contact your KROHNE Service engineer before you open the housing.

Switch off power source before opening the housing

- Before consulting the factory about errors/faults or flow measurement problems, please invoke Fct. 2.2 HARDW. INFO (hardware information).
- An 8-character and a 10-character status code are stored under this function in each of 3 “windows”. These 6 status codes will enable rapid and simple diagnosis of your compact flowmeter.
- Power the system.
- Press the following keys for display of the status codes:

<table>
<thead>
<tr>
<th>Key</th>
<th>Displayed</th>
<th>Description</th>
</tr>
</thead>
<tbody>

</tbody>
</table>

Sample status code

3.25105.02 (8-character code, 1st line)
3A47F01DB1 (10-character code, 2nd line)

PLEASE NOTE DOWN ALL 6 STATUS CODES!

If you need to return your flowmeter to KROHNE, please refer to the last-but-one page of these Instructions!
8 Service

Please note!

Do not open the housing of the BATCHFLUX IFM 5015 K.

Danger of contamination with substances likely to destroy the moisture barrier of the electronic equipment (e.g. if CIP or SIP cleaned from the outside).

Therefore, please contact your KROHNE Service engineer before you open the housing.

8.1 Important advice for removing the flowmeter from the pipeline – PLEASE NOTE

Attention is drawn to the following points to ensure reliable and proper dismantling of the flowmeter:

- Switch off the power source before dismantling the flowmeter.
- Shut off the flow through the pipeline.
- Drain the pipes upstream and downstream of the flowmeter.
- Support the ends of the pipes on both sides of the flowmeter when installed in a long and freely suspended section of the pipeline.
- Shut off any compressed air supplies used.
- Drip pans or similar receptacles should be kept ready and used to collect any residual liquids in the pipe system when dismantling the flowmeter.

8.2 Removal from the pipe system

- Detach power line from attachment plug (8) on signal converter housing.
- Disconnect grounding wire from U-clamp terminal (9) on converter housing.
- Detach status indication wire (option) from attachment plug (7).
- Remove air supply line: unscrew union nut from connection (6).
- Detach nuts from stud bolts (14).

Caution: risk of injury!
The pipe system can contract or extend when the flowmeter is removed. The pipeline must be relieved of stresses before the flowmeter is removed.

- Hold the flowmeter firmly. Pull out the stud bolts (14). Pull the pipe flanges slightly apart and remove the flowmeter.

11 Block diagram

The IFC 015 signal converter consists of 3 functional groups.

**Functional group 1** contains an input amplifier, and a high-resolution analog/digital converter (ADC) that is controlled and monitored by microprocessor µP 1. At the same time the processor controls functional groups 2 and 3. The function values of the device are stored in EEPROM 1 (ECOPROM), while all internal correction and calibration values are stored in EEPROM 2.

**Functional group 2** generates a pulsed, electronically controlled direct current for the field coils of the primary head. This group is electrically connected to functional group 3.

**Functional group 3** consists of passive FET optocouplers to allow control of electronic and electromechanical totalizers. This group is electrically separated from the other groups.

- 1/2/3 signal inputs
- 7/8 field coils for connection of add-on devices, see Sect. 6
- P pulse output \( \leq 10,000 \text{ pulses/s (Hz)} \)

Block diagram IFC 015
12 Measuring principle

Flowmeter for electrically conductive liquids.
Measurement is based on Faraday's law of induction, according to which a voltage is induced in an electrically conductive body passing through a magnetic field.

The following expression applies:

\[ U = K \times B \times v \times D \]

- \( K \): an instrument constant
- \( B \): magnetic field strength
- \( v \): mean velocity
- \( D \): tube diameter

Thus, the induced voltage is proportional to the mean flow velocity, when the field strength is constant. Inside the electromagnetic flowmeter, the liquid passes through a magnetic field applied perpendicular to the direction of flow.

An electric voltage is induced by the movement of the liquid (which must have a minimum electrical conductivity), which is proportional to the mean flow velocity and thus to the volume of flow.

The induced voltage signal is picked up by two electrodes that are in conductive contact with the liquid, and transmitted to a signal converter for a standardized output signal.

E.2 Form to accompany returned device

If you need to return flowmeters for testing or repair to KROHNE

Your electromagnetic flowmeter

• has been carefully manufactured and tested
• and volumetrically calibrated in one of the world’s most accurate test rigs.

If installed and operated in accordance with these operating instructions, your flowmeter will rarely present any problems.

Should you nevertheless need to return a flowmeter for checkout or repair, please pay strict attention to the following points:

Due to statutory regulations concerning protection of the environment and safeguarding the health and safety of our personnel, Krohne may only handle, test and repair returned flowmeters that have been in contact with liquids if it is possible to do so without risk to personnel and environment.

This means that KROHNE can only service your flowmeter if it is accompanied by a certificate in line with the following model confirming that the flowmeter is safe to handle.

If the flowmeter has been operated with toxic, caustic, flammable or water-endangering liquids, you are kindly requested

• to check and ensure, if necessary by rinsing or neutralizing, that all cavities in the flowmeter are free from such dangerous substances. (Directions on how you can find out whether the primary head has to be opened and flushed out or neutralized are obtainable from KROHNE on request.)

• to enclose a certificate with the flowmeter confirming that the flowmeter is safe to handle and stating the liquid used.

KROHNE regret that they cannot service your flowmeter unless it is accompanied by such a certificate.

Printed Form sheet (suitable for copying)

Company: .......................................................... Address: ...........................................
Department: ........................................................ Name:..................................................
Tel. No.: ..........................................................

The enclosed electromagnetic flowmeter

Type: .......................... KROHNE Order No. or Series No.: ..........................................................

has been operated with the following process liquid ............................................................................

Because this process liquid is

water-endangering / toxic / caustic / flammable

we have
– checked that all cavities in the flowmeter are free from such substances *
– flushed out and neutralized all cavities in the flowmeter *
(* delete where not applicable)

We confirm that there is no risk to man or environment through any residual liquid contained in the flowmeter.
