Electromagnetic signal converter

Electronic Revision ER 4.0.0

The documentation is only complete when used in combination with the relevant documentation for the sensor.
# IFC 070

9 Notes  34
1.1 Software versions

For all GDC devices, the "Electronic Revision" (ER) is consulted to document the revision status of the electronics according to NE 53. It is easy to see from the ER whether any fault repairs or major changes to the electronic equipment have taken place and what effect they have had on compatibility.

Changes and effect on compatibility

| 1 | Downwards compatible changes and fault repair with no effect on operation (e.g. spelling mistakes on display) |
| 3- | Downwards compatible hardware and/or software change of inputs and outputs: |
| P | Pulse output |
| S | Status output |
| X | all inputs and outputs |
| 4 | Downwards compatible changes with new functions |
| 5 | Incompatible changes, i.e. electronic equipment must be changed. |

CAUTION!
The OPTIFLUX 2070 and the WATERFLUX 3070 are different instruments with different software. The difference lies in the Electronic Revision number, which can be found on a sticker on the IFC 070 electronics. The electronics are therefore not compatible with each other!

1.2 Intended use

This signal converter IFC 070 has been designed to be combined with a WATERFLUX 3000 water meter or with an OPTIFLUX 2000 flow sensor, for measuring potable water and water with suspended particles.

This device features not only accurate flow measurement, but also continuous diagnostics in accordance with applicable standards. This self-diagnosis monitors and automatically reports improper functioning of the electronics, or faulty sensor electrodes. It reports battery charge condition and even provides a cable-break alarm.
1.3 Transportation, handling and using instruction for batteries

**WARNING!**
The used lithium batteries are primary power sources with high energy content. If mistreated, they may present a potential risk.

**INFORMATION!**
The manufacturer assumes no liability for customer failure.

Please observe the following transportation, handling and using instructions:

- Transport only in special packaging with special labels and transportation documents.
- Do not short-circuit, recharge, overcharge or connect with false polarity.
- Do not expose to temperature beyond the specified temperature range or incinerate the battery.
- Do not crush, puncture or open cells or disassemble battery packs.
- Do not weld or solder to the body of the battery.
- Do not expose contents of battery to water.
- Remove the battery from device before returning to the manufacturer for service or warranty reasons.
- Dispose battery packs in accordance with local regulations; where possible, recycle used batteries.

1.4 Safety instructions from the manufacturer

1.4.1 Copyright and data protection

The contents of this document have been created with great care. Nevertheless, we provide no guarantee that the contents are correct, complete or up-to-date.

The contents and works in this document are subject to German copyright. Contributions from third parties are identified as such. Reproduction, processing, dissemination and any type of use beyond what is permitted under copyright requires written authorisation from the respective author and/or the manufacturer.

The manufacturer tries always to observe the copyrights of others, and to draw on works created in-house or works in the public domain.

The collection of personal data (such as names, street addresses or e-mail addresses) in the manufacturer’s documents is always on a voluntary basis whenever possible. Whenever feasible, it is always possible to make use of the offerings and services without providing any personal data.

We draw your attention to the fact that data transmission over the Internet (e.g. when communicating by e-mail) may involve gaps in security. It is not possible to protect such data completely against access by third parties.

We hereby expressly prohibit the use of the contact data published as part of our duty to publish an imprint for the purpose of sending us any advertising or informational materials that we have not expressly requested.
1.4.2 Disclaimer

The manufacturer will not be liable for any damage of any kind by using its product, including, but not limited to direct, indirect, incidental, punitive and consequential damages.

This disclaimer does not apply in case the manufacturer has acted on purpose or with gross negligence. In the event any applicable law does not allow such limitations on implied warranties or the exclusion of limitation of certain damages, you may, if such law applies to you, not be subject to some or all of the above disclaimer, exclusions or limitations.

Any product purchased from the manufacturer is warranted in accordance with the relevant product documentation and our Terms and Conditions of Sale.

The manufacturer reserves the right to alter the content of its documents, including this disclaimer in any way, at any time, for any reason, without prior notification, and will not be liable in any way for possible consequences of such changes.
1.4.3 Product liability and warranty

The operator shall bear responsibility for the suitability of the device for the specific purpose. The manufacturer accepts no liability for the consequences of misuse by the operator. Improper installation and operation of the devices (systems) will cause the warranty to be void. The respective "Standard Terms and Conditions" which form the basis for the sales contract shall also apply.

1.4.4 Information concerning the documentation

To prevent any injury to the user or damage to the device it is essential that you read the information in this document and observe applicable national standards, safety requirements and accident prevention regulations.

If this document is not in your native language and if you have any problems understanding the text, we advise you to contact your local office for assistance. The manufacturer can not accept responsibility for any damage or injury caused by misunderstanding of the information in this document.

This document is provided to help you establish operating conditions, which will permit safe and efficient use of this device. Special considerations and precautions are also described in the document, which appear in the form of underneath icons.
1.4.5 Warnings and symbols used

Safety warnings are indicated by the following symbols.

**DANGER!**
This information refers to the immediate danger when working with electricity.

**DANGER!**
This warning refers to the immediate danger of burns caused by heat or hot surfaces.

**DANGER!**
These warnings must be observed without fail. Even partial disregard of this warning can lead to serious health problems and even death. There is also the risk of seriously damaging the device or parts of the operator's plant.

**WARNING!**
Disregarding this safety warning, even if only in part, poses the risk of serious health problems. There is also the risk of damaging the device or parts of the operator's plant.

**CAUTION!**
Disregarding these instructions can result in damage to the device or to parts of the operator's plant.

**INFORMATION!**
These instructions contain important information for the handling of the device.

**LEGAL NOTICE!**
This note contains information on statutory directives and standards.

- **HANDLING**
  This symbol designates all instructions for actions to be carried out by the operator in the specified sequence.

- **RESULT**
  This symbol refers to all important consequences of the previous actions.

1.5 Safety instructions for the operator

**WARNING!**
In general, devices from the manufacturer may only be installed, commissioned, operated and maintained by properly trained and authorized personnel.
This document is provided to help you establish operating conditions, which will permit safe and efficient use of this device.
2.1 Instrument description

Two versions are available. You received a compact version or a remote version.

Figure 2-1: Versions
① compact version
② remote version

2.2 Scope of delivery

Figure 2-2: Scope of delivery
① Ordered flowmeter
② Quick Start
③ Factory calibration report
④ CD-ROM with product documentation
⑤ Cable (remote versions only)
### 2.3 Nameplate

**INFORMATION!**

Look at the device nameplate to ensure that the device is delivered according to your order.

Check for the correct supply voltage printed on the nameplate.

---

**Figure 2-3: Example for nameplate**

1. Manufacturer
2. Voltage information
3. Electronic Revision number
4. Material of wetted parts
5. Meter constant
6. Serial number
7. Device type

---
3.1 Notes on installation

**INFORMATION!**
Inspect the cartons carefully for damage or signs of rough handling. Report damage to the carrier and to the local office of the manufacturer.

**INFORMATION!**
Check the packing list to check if you received completely all that you ordered.

**INFORMATION!**
Look at the device nameplate to ensure that the device is delivered according to your order. Check for the correct supply voltage printed on the nameplate.

3.2 Storage

- Store the device in a dry, dust-free location.
- Avoid continuous direct sunlight.
- Store the device in its original packaging.
- Storage temperature: -50 ...+70°C / -58...+158°F

3.3 Transport

![Figure 3-1: Transport](image)

3.4 Pre-installation requirements

Make sure that you have all necessary tools available:

- Allen key (4 mm)
- Small screwdriver
- Wrench for cable glands
- Wrench for wall mounting bracket (remote version only)
- Torque wrench for installing flowmeter in pipeline
3.5 Installation requirements

3.5.1 Vibration

- Mount converter with mounting plate on wall or standpipe.
- Keep distance between sensor and signal converter as short as possible.
- Observe length of the delivered signal cable.

3.5.2 Magnetic field

INFORMATION!
Only applicable for remote versions.

3.5.3 Installation of converter

- Mount converter with mounting plate on wall or standpipe.
- Keep distance between sensor and signal converter as short as possible.
- Observe length of the delivered signal cable.
4.1 Safety instructions

**WARNING!**
Observe without fail the local occupational health and safety regulations. Any work done on the electrical components of the measuring device may only be carried out by properly trained specialists.

**INFORMATION!**
Look at the device nameplate to ensure that the device is delivered according to your order. Check for the correct supply voltage printed on the nameplate.

4.2 Grounding

![Figure 4-1: Grounding](image)

4.3 Signal cable

**CAUTION!**
To ensure smooth functioning, always use the signal cables included in the delivery.

**INFORMATION!**
You only receive a signal cable if you ordered a remote version.
4.4 Connection of signal cable

**INFORMATION!**
The signal cable is only used with remote versions. The standard KROHNE WSC-cable includes both electrode and field current leads, the optional type A/B cable is only used for the electrodes. In that case, the field current cable is no part of the supply.

Figure 4-2: Cable connection at converter side, standard cable

1. cable length: 13 cm / 5”
2. cable length: 5 cm / 2”
3. brown + white cable, used for field current
4. purple and blue cable, used for electrode signals
5. cable length: 8 cm / 3”
6. Shield (terminal 1 of connector X2 + U-clamp)

- Prepare appropriate cable lengths (1...3)
- Connect the shield to the U-clamp, the brown cable to terminal 7 and the white to terminal 8.
- Connect the shield to terminal 1, the purple cable [white in case of type A or B cable] to terminal 2 and the blue [red in case of type A or B cable] to terminal 3.
4.5 Terminal assignment of converter

Electrical values

- **Pulse output passive:**
  - \( f \leq 500 \text{ Hz} \)
  - \( I \leq 10 \text{ mA} \)
  - \( U: 2.7 \ldots 24 \text{ VDC} \) [\( P \leq 100 \text{ mW} \)]

- **Status output passive:**
  - \( I \leq 10 \text{ mA} \)
  - \( U: 2.7 \ldots 24 \text{ VDC} \) [\( P \leq 100 \text{ mW} \)]
5.1 Connection of battery

**CAUTION!**
Please connect battery before first use, see relevant chapter for your type of battery. Each converter is always delivered with a disconnected battery.

![Figure 5-1: Connecting battery](image)

5.1.1 Internal battery

- Remove the blue protection cap.
- Loosen the 4 Allen bolts (4 mm).
- Remove the cover.
- Fasten the battery connector to the internal connector in the converter.
- Check that the display lights up.
- Put the cover back.

**WARNING!**
Make sure that the battery cable is not jammed by the cover.

- Tighten the 4 Allen bolts.
- Put the blue protection cap back.

**INFORMATION!**
The instrument now operates with factory set parameters.
For configuration of these settings, please refer to the handbook and/or the documentation of the converter.

5.1.2 External battery

- Remove the blue protection cap.
- Loosen the 4 Allen bolts (4 mm).
- Remove the cover.
- Remove one of the blind cable glands in the bottom of the converter housing.
- Remove the metal strip at the bottom of the housing (2 screws).
- Lead the cable of the external battery through the gland opening and mount the attached cable gland loosely.
- Pull the cable to the top of the electronics.
- Fasten the battery connector to the internal connector in the IFC 070 converter.
• Check that the display lights up.
• Refit the metal strip at the bottom of the housing.
• Tighten the cable gland.
• Put the cover back.

WARNING!
Make sure that the battery cable is not jammed by the cover.

• Tighten the 4 Allen bolts.
• Put the blue protection cap back.

INFORMATION!
The instrument now operates with factory set parameters.
For configuration of these settings, please refer to the handbook and/or the documentation of the converter.
6.1 Display and operating elements

![Diagram of display and operating elements]

- Battery status
- Optical key (V) to navigate through the menu and to scroll through the measuring pages
- Reset button (only accessible with removed cover)
- Flow direction
- Measured value and measuring unit
- Optical key (Z) to navigate through the menu

6.2 Menu of converter

- To enter the menu, hold the (V) and (Z) key for 5 seconds.
  - The display flashes.
- Press the (Z) key to enter the menu.
  - You see the menu number at the left (12 at the beginning) and the value at the right side of the display.
- Scroll through the available positions with the (V) key to the position you want to change.
- Press the (Z) key to enter the value.
  - The value flashes.
- Use the (Z) and (V) key to change the value.
- Hold the (Z) key for 3 seconds to confirm the new value.
- To leave the programming mode, hold the (V) key for 3 seconds to store the new value(s). If you do not want to store the new values, do not touch any key for 60 seconds.

Other functions:
- Software version: press (Z) key for 1 second
- Display test: press (Z) key twice for 1 second
6 OPERATION

CAUTION!
Take care with changing menu number 13. If you set this to "1", the display locks. IF this happens:

- Remove the protection cap.
- Loosen the 4 Allen bolts (4 mm).
- Remove the cover.
- Press both keys simultaneously and press the reset button for 6 seconds as shown in the graph below. Use a small screwdriver for the reset button.
- Display starts with the menu, beginning with menu no. 12.
- Go to menu no. 13 and change 1 into 0.
- Hold the ▶ key for 3 seconds to confirm the new value.
- Put the cover back.

Figure 6-1: Entering the menu if menu no. 13 is set to 1 (fiscal metering active)

WARNING!
Make sure that the battery cable is not jammed by the cover.

- Tighten the 4 Allen bolts.
- Put the blue protection cap back.

7.1 Replacement of battery

Different type of batteries with different capacities are available. They can be exchanged by other types if wanted.

7.1.1 Replacement of internal battery

- Remove the protection cap.
- Loosen the 4 Allen bolts [4 mm].
- Remove the cover.
- Disconnect the connector of the battery.
• Remove the battery holder by pulling it upwards.
• Remove the battery from the holder.
• Insert the new battery in the holder.
• Replace the holder.
• Fasten the battery connector to the internal connector in the converter.
• Check that the display lights up.
• Replace the cover.

**WARNING!**
Make sure that the battery cable is not jammed by the cover.

• Tighten the 4 bolts.
• Enter the programming mode, hold the ▼ and ▶ key for 5 seconds.
  The display flashes.
• Press the ▶ key to enter the menu.
• Scroll through the available positions with the ▼ key to position 74 and check the battery capacity (important for battery life indication):
  - internal single pack battery: 19 Ah
  - internal dual pack battery: 38 Ah
  - External battery pack: 76 Ah
• Go to position 75 and enter “1” (reset battery counter).
  Battery capacity symbol at the display should be “full”.
• Hold the ▼ key for 3 seconds to confirm the new value and go back to the measuring mode.
• Put the blue protection cap back.

### 7.1.2 Replacement of external battery

- Remove the blue protection cap.
- Loosen the 4 Allen bolts (4 mm).
- Remove the cover.
- Loosen the used cable gland in the bottom of the converter housing.
- Remove the metal strip at the bottom of the housing [2 screws].
- Disconnect the connector of the battery.
- Remove the cable of the old battery.

**WARNING!**
Make sure that the battery cable is not jammed by the cover.
• Lead the cable of the new external battery through the gland opening and mount the attached cable gland loosely.
• Pull the cable to the top of the electronics.
• Fasten the battery connector to the internal connector in the IFC 070 converter.
• Check that the display lights up.
• Refit the metal strip at the bottom of the housing.
• Tighten the cable gland.
• Put the cover back.

**WARNING!**
Make sure that the battery cable is not jammed by the cover.

• Tighten the 4 bolts.
• Enter the programming mode, hold the \( \downarrow \) and \( \rightarrow \) key for 5 seconds.
  \( \Rightarrow \) The display flashes.
• Press the \( \rightarrow \) key to enter the menu.
• Scroll through the available positions with the \( \downarrow \) key to position 74 and check the battery capacity (important for battery life indication):
  - internal single pack battery: 19 Ah
  - internal dual pack battery: 38 Ah
  - External battery pack: 76 Ah
• Go to position 75 and enter "1" (reset battery counter).
  \( \Rightarrow \) Battery capacity symbol at the display should be "full".
• Hold the \( \downarrow \) key for 3 seconds to confirm the new value and go back to the measuring mode.
• Put the blue protection cap back.

### 7.2 Spare parts availability

The manufacturer adheres to the basic principle that functionally adequate spare parts for each device or each important accessory part will be kept available for a period of 3 years after delivery of the last production run for the device.

This regulation only applies to spare parts which are under normal operating conditions subjects to wear and tear.

### 7.3 Availability of services

The manufacturer offers a range of services to support the customer after expiration of the warranty. These include repair, technical support and training.

**INFORMATION!**
For more precise information, please contact your local representative.

### 7.4 Returning the device to the manufacturer

#### 7.4.1 General information

This device has been carefully manufactured and tested. If installed and operated in accordance with these operating instructions, it will rarely present any problems.
CAUTION!
Should you nevertheless need to return a device for inspection or repair, please pay strict attention to the following points:

• Due to statutory regulations on environmental protection and safeguarding the health and safety of our personnel, manufacturer may only handle, test and repair returned devices that have been in contact with products without risk to personnel and environment.

• This means that the manufacturer can only service this device if it is accompanied by the following certificate (see next section) confirming that the device is safe to handle.

CAUTION!
If the device has been operated with toxic, caustic, flammable or water-endangering products, you are kindly requested:

• to check and ensure, if necessary by rinsing or neutralizing, that all cavities are free from such dangerous substances,

• to enclose a certificate with the device confirming that is safe to handle and stating the product used.
7.4.2 Form (for copying) to accompany a returned device

<table>
<thead>
<tr>
<th>Company:</th>
<th>Address:</th>
</tr>
</thead>
<tbody>
<tr>
<td>Department:</td>
<td>Name:</td>
</tr>
<tr>
<td>Tel. no.:</td>
<td>Fax no.:</td>
</tr>
</tbody>
</table>

Manufacturer’s order no. or serial no.:

The device has been operated with the following medium:

This medium is:  
- water-hazardous
- toxic
- caustic
- flammable

We checked that all cavities in the device are free from such substances.

We have flushed out and neutralized all cavities in the device.

We hereby confirm that there is no risk to persons or the environment through any residual media contained in the device when it is returned.

Date:

Stamp:

7.5 Disposal

CAUTION!
Disposal must be carried out in accordance with legislation applicable in your country.
8.1 Measuring principle

An electrically conductive fluid flows inside an electrically insulating pipe through a magnetic field. This magnetic field is generated by a current, flowing through a pair of field coils. Inside of the fluid, a voltage $U$ is generated:

$$U = v \cdot k \cdot B \cdot D$$

in which:

- $v$ = mean flow velocity
- $k$ = factor correcting for geometry
- $B$ = magnetic field strength
- $D$ = inner diameter of flow meter

The signal voltage $U$ is picked off by electrodes and is proportional to the mean flow velocity $v$ and thus the flow rate $q$. The signal voltage is quite small (typically 1 mV at $v = 3$ m/s / 10 ft/s and field coil power of 1 W). Finally, a signal converter is used to amplify the signal voltage, filter it (separate from noise) and convert it into signals for totalising, recording and output processing.

1. Induced voltage (proportional to flow velocity)
2. Electrodes
3. Magnetic field
4. Field coils
8.2 Technical data

**INFORMATION!**
- The following data is provided for general applications. If you require data that is more relevant to your specific application, please contact us or your local representative.
- Additional information (certificates, special tools, software, ...) and complete product documentation can be downloaded free of charge from the website [Download Center].

Operating conditions

**Temperature**
- Process temperature: -5...+70°C / 23...+158°F
- Ambient temperature: -40...+65°C / -40...+149°F
- Storage temperature: -50...+70°C / -58...+158°F

**Chemical properties**
- Physical condition: Liquids
- Electrical conductivity: ≥ 20 μS/cm
- Recommended flow velocity: -9...9 m/s / -30...30 ft/s
- Process conditions: Raw water, ground- and surface water
  - Potable water
  - Irrigation water

Installation conditions

**Dimensions and weights**
For detailed information see chapter “Dimensions and weights”.

Materials

- **Housing**: Die-cast aluminium, polyurethane coated
- **Connection box (remote versions only)**: Die-cast aluminium, polyurethane coated

Electrical connections

**Power supply**

- **Battery**
  - Standard: 1 Lithium battery (D-cell)
  - Optional: 2 Lithium batteries (D-cell)
  - External battery pack with 4 lithium batteries (D-cell, IP 68)

- **Typical lifetime**: See graph at the end of this table.
- **Alarm**: Pre-alarm at 10% of energy left
  - Final alarm at 1% of energy left
- **Battery replacement**: Possible without loss of totalizer data

**In- and output**

- **Outputs**
  - 2 Passive pulse outputs for remote totalising: f ≤ 500 Hz; I ≤ 10 mA; U: 2.7...24 VDC [P ≤ 100 mW]
  - 2 Passive status outputs: I ≤ 10 mA; U: 2.7...24 VDC [P ≤ 100 mW]

- **Communication**
  - Optional: external data logger / GSM module, SMS protocol to:
    - SCADA system [at customer’s site]
    - OPC server [to be connected to customer’s OPC client]
    - PCWin [mini-SCADA can be supplied by us]
Approvals and certificates

<table>
<thead>
<tr>
<th>CE</th>

</tbody>
</table>

**Compact version**

- \( a = 170 \text{ mm} / 6.7" \)
- \( b = 132 \text{ mm} / 5.3" \)
- \( c = 140 \text{ mm} / 5.5" \)
- Weight of converter = 1.9 kg / 4.2 lbs
- Sizes of sensor can be found in the relevant datasheet.

**Remote version, signal converter**

- \( b = 122 \text{ mm} / 4.8" \)
- \( c = 235 \text{ mm} / 9.3" \)
- \( H = 310 \text{ mm} / 12.2" \)
- Weight of converter = 3.3 kg / 7.3 lbs
KROHNE product overview

- Electromagnetic flowmeters
- Variable area flowmeters
- Ultrasonic flowmeters
- Mass flowmeters
- Vortex flowmeters
- Flow controllers
- Level meters
- Temperature meters
- Pressure meters
- Analysis products
- Measuring systems for the oil and gas industry
- Measuring systems for sea-going tankers
