1.1 Intended use

The transmitter is a two-wire non-isolating PC configured transmitter designed for Pt100 temperature sensors and intended to be used in industrial environments.

The TT 22 C / TT 22 C Ex is intended for installation in a B connection head or larger according to EN 50446. It's designed for a three wire sensor connection.

The TT 22 R is intended for installation on a rail according to EN 60715 / DIN 50022.

The transmitters are configured from a PC by using the ConSoft program and a transmitter configuration kit (USB connection) ICON without external power supply. Calibration of the transmitter, after the PC configuration is not necessary.

DANGER!
You may only use transmitters labelled with the “Ex” symbol in potentially explosive areas or connect them to a sensor located in those areas. Additionally always note the zone(s) for which the devices have an approval. Otherwise the transmitters might cause an explosion that can result in fatal injuries.

DANGER!
Responsibility for the correct use of the devices with special regard to suitability, intended use and the field of application lies solely with the operator. To avoid any kind of incorrect use, also note the information in the chapter “Device description”.

DANGER!
The transmitters do not contain any serviceable parts inside. Any substitution of components may impair the intrinsic safety of the versions with an Ex approval. Always send defective devices to the manufacturer or the local distributor for repair or exchange. If this is the case, attach a clear description of the malfunction for warranty claims.

INFORMATION!
The manufacturer is not liable for any damage resulting from improper use or use for other than the intended purpose. To avoid any kind of incorrect use, also note the information in the chapter “Device description”!

CAUTION!
Responsibility for the use of the measuring devices with regard to suitability, intended use and corrosion resistance of the used materials against the measured fluid lies solely with the operator.

INFORMATION!
This device is a Group 1, Class A device as specified within CISPR11:2009. It is intended for use in industrial environment. There may be potential difficulties in ensuring electromagnetic compatibility in other environments, due to conducted as well as radiated disturbances.
1.2 Certifications

1.2.1 EC directive compliance

**CE marking**

The device fulfils all applicable statutory requirements of the following EC directives:

- CE Directive 93/68/EC

The manufacturer certifies successful testing of the product by applying the CE marking.

1.2.2 Ex approvals

**TT 22 C Ex (intrinsically safe)**

**INFORMATION!**

See also "Special conditions for safe use" in the ATEX certificates in the download area of the manufacturer's website.
1.3 Safety instructions from the manufacturer

1.3.1 Copyright and data protection

The contents of this document have been created with great care. Nevertheless, we provide no guarantee that the contents are correct, complete or up-to-date.

The contents and works in this document are subject to copyright. Contributions from third parties are identified as such. Reproduction, processing, dissemination and any type of use beyond what is permitted under copyright requires written authorisation from the respective author and/or the manufacturer.

The manufacturer tries always to observe the copyrights of others, and to draw on works created in-house or works in the public domain.

The collection of personal data (such as names, street addresses or e-mail addresses) in the manufacturer’s documents is always on a voluntary basis whenever possible. Whenever feasible, it is always possible to make use of the offerings and services without providing any personal data.

We draw your attention to the fact that data transmission over the Internet (e.g. when communicating by e-mail) may involve gaps in security. It is not possible to protect such data completely against access by third parties.

We hereby expressly prohibit the use of the contact data published as part of our duty to publish an imprint for the purpose of sending us any advertising or informational materials that we have not expressly requested.

1.3.2 Disclaimer

The manufacturer will not be liable for any damage of any kind by using its product, including, but not limited to direct, indirect or incidental and consequential damages.

This disclaimer does not apply in case the manufacturer has acted on purpose or with gross negligence. In the event any applicable law does not allow such limitations on implied warranties or the exclusion of limitation of certain damages, you may, if such law applies to you, not be subject to some or all of the above disclaimer, exclusions or limitations.

Any product purchased from the manufacturer is warranted in accordance with the relevant product documentation and our Terms and Conditions of Sale.

The manufacturer reserves the right to alter the content of its documents, including this disclaimer in any way, at any time, for any reason, without prior notification, and will not be liable in any way for possible consequences of such changes.
1.3.3 Product liability and warranty

The operator shall bear responsibility for the suitability of the device for the specific purpose. The manufacturer accepts no liability for the consequences of misuse by the operator. Improper installation or operation of the devices (systems) will cause the warranty to be void. The respective “Standard Terms and Conditions” which form the basis for the sales contract shall also apply.

1.3.4 Information concerning the documentation

To prevent any injury to the user or damage to the device it is essential that you read the information in this document and observe applicable national standards, safety requirements and accident prevention regulations.

If this document is not in your native language and if you have any problems understanding the text, we advise you to contact your local office for assistance. The manufacturer can not accept responsibility for any damage or injury caused by misunderstanding of the information in this document.

This document is provided to help you establish operating conditions, which will permit safe and efficient use of this device. Special considerations and precautions are also described in the document, which appear in the form of icons as shown below.
1.3.5 Warnings and symbols used

Safety warnings are indicated by the following symbols.

DANGER!
This warning refers to the immediate danger when working with electricity.

DANGER!
This warning refers to the immediate danger of burns caused by heat or hot surfaces.

DANGER!
This warning refers to the immediate danger when using this device in a hazardous atmosphere.

DANGER!
These warnings must be observed without fail. Even partial disregard of this warning can lead to serious health problems and even death. There is also the risk of seriously damaging the device or parts of the operator’s plant.

WARNING!
Disregarding this safety warning, even if only in part, poses the risk of serious health problems. There is also the risk of damaging the device or parts of the operator’s plant.

CAUTION!
Disregarding these instructions can result in damage to the device or to parts of the operator’s plant.

INFORMATION!
These instructions contain important information for the handling of the device.

LEGAL NOTICE!
This note contains information on statutory directives and standards.

• HANDLING
This symbol designates all instructions for actions to be carried out by the operator in the specified sequence.

• RESULT
This symbol refers to all important consequences of the previous actions.

1.4 Safety instructions for the operator

WARNING!
In general, devices from the manufacturer may only be installed, commissioned, operated and maintained by properly trained and authorized personnel. This document is provided to help you establish operating conditions, which will permit safe and efficient use of this device.
2.1 Scope of delivery

INFORMATION!
Inspect the packaging carefully for damages or signs of rough handling. Report damage to the carrier and to the local office of the manufacturer.

INFORMATION!
Do a check of the packing list to make sure that you have all the elements given in the order.

INFORMATION!
Look at the device nameplate to ensure that the device is delivered according to your order.

The scope of delivery always consists of the transmitter and its documentation.

2.2 Device description

The TT 22 C / TT 22 C Ex is designed for installation in a B connection head according to EN 50446. With an installation kit the transmitter can be installed on a top-hat rail according to EN 60715 / DIN 50022.

The TT 22 R is intended for installation on a rail according to EN 60715 / DIN 50022.

The transmitters are configured from a PC by using the ConSoft program and a transmitter configuration kit ICON. When transmitters are configured from PC no calibration is necessary.

The PC configuration software ConSoft is used for configuration, display and documentation. The current ConSoft version is available for downloading on our website.

You can find configuration instructions in the ConSoft reference manual.

ConSoft is compatible with Windows XP/Vista/7/8/8.1/10.
2.3 Nameplate

INFORMATION!

Look at the device nameplate to ensure that the device is delivered according to your order.

The transmitter can be identified by the information on the nameplates.

**Nameplate for in-head transmitter**

- **Figure 2-1: Example for round nameplate**
  1. Product name
  2. CE marking (EC conformity)
  3. Ex-relevant electrical data
  4. Part number, serial number (yyww = year and week of manufacturing) and batch number
  5. Printable field, sensor configuration
  6. Connections
  7. Manufacturer and address

- **Figure 2-2: Example for bottom nameplate**
  1. Electrical data for output
  2. Electronic/electric device waste marking
  3. Control drawing number
2 DEVICE DESCRIPTION

Figure 2-3: Example for nameplate

1. Product name
2. Part number, serial number (yyww = year and week of manufacturing) and batch number
3. Manufacturer and address
4. Printable field, sensor configuration
5. Input and output connections
6. CE marking (EC conformity) and electronic/electric device waste marking
3.1 Notes on installation

**INFORMATION!**
Inspect the packaging carefully for damages or signs of rough handling. Report damage to the carrier and to the local office of the manufacturer.

**INFORMATION!**
Do a check of the packing list to make sure that you have all the elements given in the order.

**INFORMATION!**
Look at the device nameplate to ensure that the device is delivered according to your order.

3.2 In-head transmitter

The transmitter is intended for installation in DIN B connection heads or larger. The large Ø7 mm / 0.28 inch center hole facilitates the electrical connection of the sensor and the installation. For detailed information refer to Dimensions on page 28.

![Figure 3-1: Connection head installation kit](image)

**INFORMATION!**
The connection head installation kit does not belong to the standard scope of delivery of the transmitter, you have to order it separately.
3 INSTALLATION

DANGER!
The transmitter is optionally available in an intrinsically safe version (zone 0, 1 and 2) for installation in potentially explosive atmospheres. The intrinsically safe version must be supplied by an intrinsically safe power supply unit or Zener barrier placed outside of the potentially explosive zone. The Ex transmitter must be installed in a housing with the protection rating IP20 or better according to EN 60529 / IEC 60529.

WARNING!
The transmitter has been developed for an operating temperature of -40...+85°C/-40°F...+185°F. To avoid destruction or damage of the device, always assure that the operating temperature or ambient temperature does not exceed the permissible range. The thermowell also transfers the process temperature to the transmitter housing. If the process temperature is close to or exceeds the maximum temperature of the transmitter, then the temperature in the transmitter housing can rise above the maximum permissible temperature. One way to decrease the head transfer via thermowell is to install the transmitter further away from the heat source. Inversely similar measurements can be done if the temperature gets below specified minimum temperature.
3.3 Rail mounting kit for in-head transmitters

INFORMATION!
The rail mounting kit allows to install the in-head transmitter on a rail according to EN 60715 / DIN 50022.
The kit does not belong to the standard scope of delivery. You have to order it separately.

The screws in the kit is not to be used with this transmitter.

Rail mounting kit for in-head transmitters

![Image of rail mounting kit]

Installation procedure: Step 1

1. Place the transmitter on the rail mounting kit as shown above.
2. Push the transmitter down until it reaches the plate and is attached.
3 INSTALLATION

3.4 Rail-mount transmitter

These transmitters are intended for installation on a rail according to EN 60715 / DIN 50022.

Installation procedure: Step 2

1. Hook one end of the installation the kit into the rail as shown above.
2. Push the other end of the the kit down until it snaps onto the rail.
3. Release by pushing the hook, shown in the picture, and at the same time lift the clip out of the rail.

CAUTION!
The manufacturer has developed the TT 22 R for an operating temperature range of -40...+85°C / -40...+185°F. To avoid destruction or damage of the device, always note the following items:
• Assure that the operating temperature or the ambient temperature does not exceed the permissible range.

The rail-mount transmitter is intended for installation on a rail according to EN 60715 / DIN 50022.
4.1 Safety instructions

**DANGER!**
All work on the electrical connections may only be carried out with the power disconnected.

**DANGER!**
Observe the corresponding regulations, declarations of conformity, the type test certificate of the device and the relevant instructions of this document.

**CAUTION!**
Before you connect and operate a transmitter, always note the following items to avoid an electric shock:

- For all work on the electrical connections use an electrostatic safe (i.e. grounded) workplace! In this way you minimize the risk of electrostatic discharge (ESD).

**WARNING!**
Observe without fail the local occupational health and safety regulations. Any work done on the electrical components of the measuring device may only be carried out by properly trained specialists.

**INFORMATION!**
Look at the device nameplate to ensure that the device is delivered according to your order.

**INFORMATION!**
The transmitter is protected against polarity reversal. No damage will occur to the device if the polarity of the supply voltage is switched. The output will then indicate 0 mA.

**INFORMATION!**
To avoid measuring errors, all cables must be connected properly and the screws tightened correctly.

**INFORMATION!**
The transmitter has a polarity protection, connecting the power supply with wrong polarity will not harm the transmitter.
4.3 Connection diagram of in-head transmitter

**CAUTION!**
Always establish the electrical connections according to the following diagrams. Otherwise it can come to destruction or damage of the transmitter. Note that the maximum output load always depends on the power supply. If the maximum output load is exceeded, then the measured value will become incorrect. For further information refer to the output load diagram in the chapter “Technical data” on page 30.

Figure 4-5: Connection diagram

1. Input
2. $R_{load}$
3. Voltage supply 6...32 VDC
5.1 Configuration of transmitter

The transmitters are configured from a PC by using the ConSoft program and a transmitter configuration kit ICON. For more information refer to Accessory parts on page 22.

The ConSoft is a PC based graphical user interface for configuration of the transmitters. The PC configuration software ConSoft is used for configuration, display and documentation.

Configuration can be performed with or without connected power supply.

To make a configuration of the transmitter you need to do following:

1. Install the PC configuration software ConSoft in your PC.
2. Install the driver for the Transmitter configuration kit ICON (included in the transmitter configuration kit ICON). See documentation for transmitter configuration kit ICON.
3. Connect the transmitter to your PC via the transmitter configuration kit ICON.
4. Start the software ConSoft.
5. Click on the icon "Read from the transmitter" or File - "Read from the transmitter".
6. Enter one of the following options:
   - Measuring range - lower range value and upper range value
   - Error monitoring - upscale or downscale action at sensor error
   - Error correction - sensor error lower and upper values - compensation for known sensor errors
   - Filtering level
   - Custom settings - Tag number
7. The selected configuration is downloaded to the transmitter by clicking the icon "Transfer to transmitter" or File - "Transfer to transmitter"
8. The transmitter begins using the new parameters directly after downloading.

**INFORMATION!**

Full functionality of the transmitter is achieved with ConSoft program version 3.1.0 or later and the firmware in the USB Interface must have a version number 1.2.06 or later. Consoft is compatible with Windows XP/Vista/7/8/8.1/10. The current software version of ConSoft and the USB interface are available for downloading on our website.

**CAUTION!**

Only use the manufacturer’s configuration kit for PC configuration. Another configuration kit could destroy or damage the transmitter.
5.2 Factory calibration of transmitter

The transmitters are delivered with a factory configuration Pt100 (α = 0.00385), 3-wire connection 0...+100 °C / +32...+212 °F, Sensor error monitoring Upscale, Filtering level 0.9 s or configured according to customer’s requirements.

Due to the long-term drift of max. ±0.1% of span per year, a re-calibration of the transmitter is normally not needed. Should you for any reason require the re-calibration, the transmitter must be returned to the factory.

5.3 Sensor break monitoring (up/down scale)

In case the sensor breaks the transmitter will indicate this by either drop the output <3.6 mA or lift it to >21.0 mA. The different indication is set in the transmitter via configurator.

5.4 Sensor short circuit (up/down scale)

In case of a sensor short circuit the transmitter indicates this by either drop the output <3.6 mA or lift it to >21.0 mA. The different indication is set in the transmitter via configurator.

5.5 Error corrections

By setting the measured min. and max. value for the sensor in given temperature range, the transmitter can compensate sensor errors. This is set with help of the configurator.

6.2 Spare parts availability

The manufacturer adheres to the basic principle that functionally adequate spare parts for each device or each important accessory part will be kept available for a period of 3 years after delivery of the last production run for the device.

This regulation only applies to spare parts which are subject to wear and tear under normal operating conditions.

6.3 Availability of services

The manufacturer offers a range of services to support the customer after expiration of the warranty. These include repair, maintenance, technical support and training.

INFORMATION!
For more precise information, please contact your local sales office.

6.4 Returning the device to the manufacturer

6.4.1 General information

This device has been carefully manufactured and tested. If installed and operated in accordance with these operating instructions, it will rarely present any problems.

CAUTION!
Should you nevertheless need to return a device for inspection or repair, please pay strict attention to the following points:

- Due to statutory regulations on environmental protection and safeguarding the health and safety of the personnel, the manufacturer may only handle, test and repair returned devices that have been in contact with products without risk to personnel and environment.
- This means that the manufacturer can only service this device if it is accompanied by the following certificate [see next section] confirming that the device is safe to handle.

CAUTION!
If the device has been operated with toxic, caustic, flammable or water-endangering products, you are kindly requested:

- to check and ensure, if necessary by rinsing or neutralising, that all cavities are free from such dangerous substances,
- to enclose a certificate with the device confirming that is safe to handle and stating the product used.
6.4.2 Form (for copying) to accompany a returned device

**CAUTION!**
To avoid any risk for our service personnel, this form has to be accessible from outside of the packaging with the returned device.

6.5 Disposal

**CAUTION!**
Disposal must be carried out in accordance with legislation applicable in your country.

Separate collection of WEEE (Waste Electrical and Electronic Equipment) in the European Union:

According to the directive 2012/19/EU, the monitoring and control instruments marked with the WEEE symbol and reaching their end-of-life must not be disposed of with other waste. The user must dispose of the WEEE to a designated collection point for the recycling of WEEE or send them back to our local organisation or authorised representative.
### 7 Technical data

#### 7.1 Measuring principles

The kind of the measuring principle depends on the measuring insert that you combine with the transmitter. In matters of the thermometer type the manufacturer offers two different measuring inserts, either with a resistance thermometer or with a thermocouple. This transmitter only supports resistance thermometer.

#### 7.1.1 Resistance temperature sensor

The measuring insert with a temperature-sensitive sensor made from a platinum RTD, whose value at 0°C / +32°F is 100 Ω. That is where the name “Pt100” comes from.

It is generally valid that the electric resistance of metals increases according to a mathematical function as the temperature rises. This effect is taken advantage of by resistance temperature sensors to measure temperature. The “Pt100” temperature sensors features a measuring resistance with defined characteristics, standardised in IEC 60751. The same is true for the tolerances. The average temperature coefficient of a Pt100 is 3.85 x 10⁻³ K⁻¹ in the range from 0...+100°C / +32...+212°F.

During operation, a constant current I (≤ 1 mA) flows through the Pt100 RTD, which brings about a voltage drop U. The resistance R is calculated using Ohm’s Law \( R = \frac{U}{I} \). As the voltage drop U at 0°C / +32°F is 100 mV, the resulting resistance of the Pt100 temperature assembly is 100 Ω (100 mV / 1 mA = 100 Ω).

![Figure 7-1: Pt100 resistance temperature sensor in 4-wire connection at 0°C / +32°F, schematic.](image-url)
7.2 Technical data

INFORMATION!
- The following data is provided for general applications. If you require data that is more relevant to your specific application, please contact us or your local sales office.
- Additional information (certificates, special tools, software,...) and complete product documentation can be downloaded free of charge from the website (Downloadcenter).

| Maximum sensor wire resistance | 20 Ω/wire |
| Adjustment                  | Minimum span 20°C / 36°F |
|                            | Sensor error compensation ±10% of span for span <100°C/180°F, otherwise ±10°C/±18°F |
## OPTITEMP TT 22 C/R

### TECHNICAL DATA

**Output**

<table>
<thead>
<tr>
<th>Output signal</th>
<th>4...20 mA</th>
</tr>
</thead>
<tbody>
<tr>
<td>Temperature linear</td>
<td></td>
</tr>
</tbody>
</table>

**Permissible load**

- Standard version: \((\text{Supply voltage}-6)/0.022\)
- IS version: \((\text{Supply voltage}-8)/0.022\)

**NAMUR compliance**

Output limits and failure currents acc. to NAMUR NE 43

**Adjustable filtering level**

0.13 to 54 s, [default 0.9 s]

**Monitoring**

Combined sensor break and short circuit monitoring, selectable, upscale ≥21.0 mA or downscale ≤3.6 mA action

### Configuration

**ConSoft**

The PC configuration software, ConSoft, is a versatile and user-friendly tool for transmitter configuration.

ConSoft is compatible with Windows XP/Vista/7/8/8.1/10

ConSoft is part of the complete configuration kit ICON, which also contains a USB Interface and necessary cables.

Full functionality of the transmitter is achieved with ConSoft program version 3.1.0 or later and the firmware in the USB Interface must have a version number 1.2.06 or later.

### Approvals and certifications

**CE**

The device fulfills the statutory requirements of the EC directives. The manufacturer certifies that these requirements have been met by applying the CE marking.

**EX approvals**

- Standard version: Without
- Intrinsically safe (IS) version: ATEX: II 1 G Ex ia IIC T6...T4 Ga (only in-head transmitter)
  IECEx: Ex ia IIC T6...T4 Ga (only in-head transmitter)

**Other standards and approvals**

  - Harmonized standards: EN 61326-1 and EN 61326-2-3
  - ESD, Radiated EM-field: Criteria A
  - Magnetic fields: Criteria A
  - Burst, conducted RF: Criteria A
  - Surge: standard deviation 1% of span
- Vibration resistance: Acc. to IEC 60948-2-6, test Fc, 10...2000 Hz, 10 g
7.3 Dimensions
