Warnings and symbols used

**DANGER!**
This information refers to the immediate danger when working with electricity.

**DANGER!**
These warnings must be observed without fail. Even partial disregard of this warning can lead to serious health problems and even death. There is also the risk of seriously damaging the device or parts of the operator’s plant.

**WARNING!**
Disregarding this safety warning, even if only in part, poses the risk of serious health problems. There is also the risk of damaging the device or parts of the operator’s plant.

**CAUTION!**
Disregarding these instructions can result in damage to the device or to parts of the operator’s plant.

**INFORMATION!**
These instructions contain important information for the handling of the device.

**HANDLING**
- This symbol designates all instructions for actions to be carried out by the operator in the specified sequence.
- **RESULT**
  This symbol refers to all important consequences of the previous actions.

Safety instructions for the operator

**CAUTION!**
Installation, assembly, start-up and maintenance may only be performed by appropriately trained personnel. The regional occupational health and safety directives must always be observed.

**LEGAL NOTICE!**
The responsibility as to the suitability and intended use of this device rests solely with the user. The supplier assumes no responsibility in the event of improper use by the customer. Improper installation and operation may lead to loss of warranty. In addition, the “Terms and Conditions of Sale” apply which form the basis of the purchase contract.

**INFORMATION!**
- Further information can be found in the handbook and on the data sheet. These documents can be downloaded from the website [Download Center].
- If you need to return the device to the manufacturer or supplier, please fill out the device return form and send it with the device. Unfortunately, the manufacturer cannot repair or inspect the device without the completed form. The form can be found in the handbook or downloaded from the website. Click on the “Service” tab on one of the web pages and read the instructions.
2.1 Intended use

CAUTION!
Responsibility for the use of the measuring devices with regard to suitability, intended use and corrosion resistance of the used materials against the measured fluid lies solely with the operator.

INFORMATION!
The manufacturer is not liable for any damage resulting from improper use or use for other than the intended purpose.

This TDR level transmitter measures distance, level, mass and volume of liquids, pastes, slurries, granulates and powders.

It can be installed on tanks, silos and open pits.
2.2 Scope of delivery

INFORMATION!
Do a check of the packing list to make sure that you have all the elements given in the order.

Figure 2-1: Scope of delivery
1. Signal converter and probe.
2. Probe segments. For the assembly procedure of the single rod probe, refer to the instructions that are supplied with the device. If a single rod or coaxial probe is attached and you ordered the “segmented probe” option, only part of the probe is attached to the device. For the assembly procedure of the segmented single rod probe, refer to the instructions that are supplied with the device. For the assembly procedure of the segmented coaxial probe, refer to the instructions that are supplied with the device.
3. Quick Start
4. DVD-ROM. This contains the Handbook, the Quick Start and the Technical Data Sheet.
5. Strap wrench

INFORMATION!
No training required!

CAUTION!
Make sure that the length of the probe is correct.
2.3 Visual Check

**INFORMATION!**
Inspect the packaging carefully for damages or signs of rough handling. Report damage to the carrier and to the local office of the manufacturer.

Figure 2-2: Visual check
1. Device nameplate (for more data, refer to the handbook)
2. Process connection data (size and pressure rating, material reference and heat number)
3. Gasket material data – refer to the illustration that follows

Figure 2-3: Symbols for the supplied gasket material (on the side of the process connection)
1. EPDM
2. Kalrez® 6375

If the device is supplied with an FKM/FPM gasket, there is no symbol on the side of the process connection.

**INFORMATION!**
Look at the device nameplate to ensure that the device is delivered according to your order. Check for the correct supply voltage printed on the nameplate.
### 2.4 Storage

**WARNING!**

*Do not keep the device in a vertical position. This will damage the probe and the device will not measure correctly.*

![Figure 2-4: Storage conditions](image)

- Do not bend rod and coaxial probes – support here
- Storage temperature range: -50…+85°C / -60…+185°F (min. -40°C / -40°F for devices with the integrated LCD display option)

- Store the device in a dry and dust-free location.
- Store the device in its original packing.
2.5 Transport

Figure 2-5: How to hold the device

1. Wind cable probes greater than 400 mm / 16” in diameter.
2. Do not hold the probe when you lift the device.
3. Do not wind the electrical cable less than 330 mm / 13” in diameter.

WARNING!
If you do not lift the device carefully, you can cause damage to the probe.

2.6 Pre-installation requirements

INFORMATION!
Obey the precautions that follow to make sure that the device is correctly installed.

- Make sure that there is sufficient space on all sides.
- Protect the signal converter from direct sunlight. If necessary, install the weather protection accessory.
- Do not subject the signal converter to heavy vibrations.
2.7 How to prepare the tank before you install the device

**CAUTION!**
To avoid measuring errors and device malfunction, obey these precautions.

### 2.7.1 Pressure and temperature ranges

#### 1. Temperature at the process connection
The temperature at the process connection must stay in the temperature range of the gasket material unless the device is a High-Temperature version. Refer to the table "Permitted temperature ranges for gaskets" that follows and to "Technical data" in the handbook.

Devices with Hazardous Location approvals: see supplementary instructions

#### 2. Ambient temperature for operation of the display
-20...+60°C / -4...+140°F
If the ambient temperature is not between these limits, the display screen switches off automatically

#### 3. Ambient temperature
Non-Ex devices: min. (Compact) -36°C / -33°F, min. (Remote) -37°C / -34.6°F max. +80°C / +176°F

Devices with Hazardous Location approvals: see supplementary instructions

#### 4. Process pressure
-1...40 barg / -14.5...580 psig

**WARNING!**
The process connection temperature range must agree with the temperature limits of the gasket material.

#### Permitted temperature ranges for gaskets

<table>
<thead>
<tr>
<th>Gasket material</th>
<th>Standard version</th>
<th>High-Temperature version</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>[°C]</td>
<td>[°F]</td>
</tr>
<tr>
<td>FKM/FPM</td>
<td>-40...+150</td>
<td>-40...+302</td>
</tr>
<tr>
<td>Kalrez® 6375</td>
<td>-20...+150</td>
<td>-4...+302</td>
</tr>
<tr>
<td>EPDM</td>
<td>-50...+150</td>
<td>-58...+302</td>
</tr>
</tbody>
</table>
Compact version:
Ambient temperature / flange temperature, flange and threaded connection, in °C

![Diagram]

Figure 2-7: Compact version: Ambient temperature / flange temperature, flange and threaded connection, in °C

Ambient temperature / flange temperature, flange and threaded connection, in °F

![Diagram]

Figure 2-8: Compact version: Ambient temperature / flange temperature, flange and threaded connection, in °F

1. Maximum ambient temperature, °C
2. Maximum flange temperature, °C
3. Maximum ambient temperature, °F
4. Maximum flange temperature, °F
5. All probes
6. All versions of the 2 mm / 0.08″ single cable probe
7. High-Temperature (HT) version of the Ø2 mm / 0.08″ single cable probe

**INFORMATION!**

When the process temperature is -50°C / -58°F and the device has a EPDM gasket, there is a de-rating for the ambient temperature:

**Compact version**

\[ T_a = -36°C / -32.8°F \text{ for the } Ø2 \text{ mm / 0.08″ single cable probe} \]

\[ T_a = -39°C / -38.2°F \text{ for the high-temperature (HT) version of the } Ø2 \text{ mm / 0.08″ single cable probe} \]

\[ T_a = -37°C / -34.6°F \text{ for all other probes} \]

**Hygienic applications only:** When the process temperature is -45°C / -49°F and the device has an EPDM gasket, there is a de-rating for the ambient temperature. \[ T_a = -39°C / -38.2°F \]
Remote version (probe housing):
Ambient temperature / flange temperature, flange and threaded connection, in °C

![Diagram](image)

Figure 2-9: Remote version (probe housing): Ambient temperature / flange temperature, flange and threaded connection, in °C

Ambient temperature / flange temperature, flange and threaded connection, in °F

![Diagram](image)

Figure 2-10: Remote version (probe housing): Ambient temperature / flange temperature, flange and threaded connection, in °F

1. Maximum ambient temperature, °C
2. Maximum flange temperature, °C
3. Maximum ambient temperature, °F
4. Maximum flange temperature, °F
5. All probes
6. All versions of the 2 mm / 0.08" single cable probe
7. High-Temperature (HT) version of the Ø2 mm / 0.08" single cable probe

**INFORMATION!**

When the process temperature is -50°C / -58°F and the device has a EPDM gasket, there is a de-rating for the ambient temperature:

**Remote version (probe housing)**

\[ T_a = -35°C / -31°F \] for the Ø2 mm / 0.08" single cable probe

\[ T_a = -39°C / -38.2°F \] for the high-temperature (HT) version of the Ø2 mm / 0.08" single cable probe

\[ T_a = -36°C / -32.8°F \] for all other probes

**Hygienic applications only:** When the process temperature is -45°C / -49°F and the device has an EPDM gasket, there is a de-rating for the ambient temperature. \( T_a = -39°C / -38.2°F \)
2.7.2 General information for nozzles

**CAUTION!**
Follow these recommendations to make sure that the device measures correctly. They have an effect on the performance of the device.

**CAUTION!**
Do not put the process connection near to the product inlet. If the product that enters the tank touches the probe, the device will measure incorrectly.

![Diagram of nozzles installation](image)

Figure 2-11: Do not put the device near to a product inlet

1. The device is in the correct position.
2. The device is too near to the product inlet.
3. If it is not possible to put the device in the recommended position, install a deflector pipe.

![Diagram of nozzles installation](image)

Figure 2-12: How to prevent build-up of product around the process connection

1. If product particles are likely to collect in holes, a nozzle is not recommended.
2. Attach the flange directly to the tank.
3. Use a threaded connection to attach the device directly to the tank.
For single cable and single rod probes:

---

**Figure 2-13: Recommended nozzle dimensions for single rod and single cable probes**

1. Recommended conditions: \( h \leq d \), where \( h \) is the height of the tank nozzle and \( d \) is the diameter of the tank nozzle.
2. The end of the nozzle must not have an extension into the tank. Do not install the device on a high nozzle.

**CAUTION!**

*If the device is installed on a high nozzle, make sure that the probe does not touch the side of the nozzle (attach the probe end etc.).*

---

**Figure 2-14: Sockets for threaded process connections**

1. Recommended installation
2. The end of the socket must not have an extension into the tank
For double cable and double rod probes:

![Diagram of double cable and double rod probe installation](image)

Figure 2-15: Recommended nozzle dimensions for double rod and double cable probes

\[ d \geq 50 \text{ mm} / 2", \text{ where d is the diameter of the tank nozzle} \]

**CAUTION!**

Install coaxial probes in clean liquids that are not too viscous.

For coaxial probes:

If your device has a coaxial probe, you can ignore these installation recommendations.

**CAUTION!**

Install coaxial probes in clean liquids that are not too viscous.

2.7.3 Installation requirements for concrete roofs

![Diagram of installation on a concrete roof](image)

Figure 2-16: Installation on a concrete roof

1. The diameter, d, of the hole must be greater than the thickness, t, of the concrete.
2. If the thickness, t, of the concrete is greater than the diameter, d, of the hole, install the device in a recess.
2.8 Installation recommendations for liquids

2.8.1 General requirements

![Diagram of installation recommendations for liquids]

Figure 2-17: Installation recommendations for liquids

1. The electromagnetic (EM) field generated by the device. It has a radius of \( R_{\text{min}} \). Make sure that the EM field is clear of objects and product flow. Refer to the table that follows.
2. If there are too many objects in the tank, install a bypass chamber or stilling well.
3. Keep the probe straight. If the probe is too long, shorten the probe length. Make sure that the device is configured with the new probe length. For more data on the procedure, refer to the handbook.
4. Empty space. Refer to the table that follows.

**Clearance between the probe and other objects in the tank**

<table>
<thead>
<tr>
<th>Probe type</th>
<th>Empty space ( (\text{radius, } R_{\text{min}}) ), around the probe</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>[mm]</td>
</tr>
<tr>
<td>Coaxial</td>
<td>0</td>
</tr>
<tr>
<td>Double rod / cable</td>
<td>100</td>
</tr>
<tr>
<td>Single rod / cable</td>
<td>300</td>
</tr>
</tbody>
</table>
2.8.2 Installation in standpipes (stilling wells and bypass chambers)

Use a standpipe if:
- The liquid is very turbulent or agitated.
- There are too many other objects in the tank.
- The device is measuring a liquid in a tank with a floating roof.

For more data, refer to the Handbook.

Figure 2-18: Installation recommendations for standpipes (stilling wells and bypass chambers)

1. Stilling well
2. Bypass chamber
3. Vent
4. Level of the liquid

**INFORMATION!**

Stilling wells are not necessary for devices with coaxial probes. But if there is a sudden change in diameter in the stilling well, we recommend that you install a device with a coaxial probe.
2.9 Installation recommendations for solids

2.9.1 Nozzles on conical silos

We recommend that you prepare the installation when the silo is empty.

*DANGER!*

Risk of electrostatic discharge (ESD): The device is resistant to electrostatic discharges of up to 30 kV, but it is the responsibility of the fitter and the user to prevent ESD.

*CAUTION!*

Install the device at the correct location to measure level correctly and prevent too much bending and traction. If necessary, attach the probe to the bottom of the tank.

![Figure 2-19: Installation recommendations for solids](image)

*a* ≥ 300 mm / 12"

d ≥ 300 mm / 12"

![Figure 2-20: Do not install the probe near to a product inlet](image)
2.9.2 Traction loads on the probe

Traction load depends on:
- The height and shape of the tank.
- The particle size and density.
- The rate at which the tank is emptied.

**CAUTION!**
Risk of damage to the cable probe. High loads can break the cable. If the load on the Ø8 mm / 0.32" single cable probe is more than 3500 kg / 7700 lb, contact your supplier. If the load on the Ø4 mm / 0.16" single cable probe is more than 875 kg / 1930 lb, contact your supplier.

**CAUTION!**
Make sure that the tank roof is resistant to deformation at high loads.

2.10 How to install the device on the tank

2.10.1 How to assemble the single rod probe (single-piece probe)

INFORMATION!
This procedure is for devices with single rod probes that are not segmented (single-piece probes).

Figure 2-21: Equipment needed to assemble the device

1. Union nut
2. 2 locking nuts
3. Housing assembly
4. Single rod probe
5. Tools: two 8 mm open-ended wrenches (not supplied)
6. Tools: one 7 mm open-ended wrench (not supplied)
Part 1: Check the order number on each component

- Make sure that the housing and the single rod have the same ID numbers.
- Remove the sticker from the probe.
Part2: How to attach the locking nut and union nut

1. Attach a locking nut to the housing assembly.
2. Make sure that the nut is fully engaged on the thread.
3. Attach the union nut to the housing assembly.
4. Tighten these nuts with the two 8 mm open-ended wrenches.
5. Continue the assembly procedure on the page that follows.
Part 3: How to attach the locking nut and union nut

Figure 2-24: Part 3: How to attach the locking nut and union nut

**CAUTION!**
*Support the probe.*

1. Attach a locking nut to the single rod.
2. Make sure that the locking nut is engaged ¾ along the length of the thread.
3. Attach the single rod to the union nut. Make sure the probe touches the housing assembly.
4. Tighten the single probe with a 7 mm open-ended wrench.
5. Tighten the locking nut against the union nut with two 8 mm open-ended wrenches.
2.10.2 How to assemble the single rod probe (segmented probe)

**INFORMATION!**
This procedure is for devices with single rod probes that are segmented.

---

![Figure 2-25: Equipment needed to assemble the single rod probe (segmented)](image)

1. Converter and process connection
2. Bottom (quantity: 1) segment of the rod probe
3. Top and middle (if more than one) segments of the rod probe
4. Tools: two 8 mm open-end wrenches (not supplied)
5. Lock nuts (2 lock nuts per segment)
6. Union nut (1 union nut per segment)

**CAUTION!**
Make sure that the housing and the single rod have the same ID numbers.
Part 1: How to assemble the segmented single rod probe

CAUTION!
Make sure that the nuts are tight and the rod probe cannot loosen.

1. Attach a lock nut to the threaded rod below the process connection. Turn the nut until it is \(\frac{3}{4}\) along the length of the rod.
2. Attach a union nut to the threaded rod below the process connection.
3. Use two 8 mm open-end wrenches to tighten the union nut against the lock nut.
Part 2: How to assemble the segmented single rod probe

![Image showing steps to assemble the rod probe]

**WARNING!**
Put a support below the probe to prevent deformation.

**CAUTION!**
Make sure that the nuts are tight and the rod probe cannot loosen.

1. Attach a lock nut to each end of the rod probe segments.
2. Attach a union nut to the bottom end of each rod probe segment, but not to the bottom segment. Use two 8 mm open-end wrenches to tighten the union nut against the lock nut.
3. Attach the top segment of the rod probe to the union nut below the process connection. Use two 8 mm open-end wrenches to tighten the union nut against the lock nut on the rod probe.
4. Attach the middle segment of the rod probe to the union nut on the top segment (if there are middle segments). Use two 8 mm open-end wrenches to tighten the union nut against the lock nut. Repeat this step for the other segments.
5. Attach the bottom segment of the rod probe to the union nut on the top segment. Use two 8 mm open-end wrenches to tighten the union nut against the lock nut.
2.10.3 How to assemble the segmented coaxial probe

![Figure 2-28: Equipment needed to assemble the coaxial probe](image)

1. Converter and process connection
2. HC M4×20 screws (1 screw per probe segment)
3. Lock washers (1 pair of washers per probe segment)
4. Top (quantity: 1), middle (quantity: 1 or more) and bottom (quantity: 1 – with 1 socket set screw M5×5) segments of the signal rod
5. PTFE spacer (1 spacer per probe segment)
6. Middle (quantity: 1 or more) and bottom (quantity: 1) segments of the coaxial tube
7. Union nut with 2 socket set screws M5×5 (1 union nut per segment of the coaxial tube)
8. Tools: two 7 mm open-end wrenches (not supplied)
9. Tools: two pipe (Stillson) wrenches (not supplied)
10. Tools: one 2.5 mm Allen wrench and one 2 mm Allen wrench (not supplied)

**CAUTION!**

Make sure that the housing and the single rod have the same ID numbers.
Part 1: How to assemble the segmented coaxial probe

![Image of assembly process]

**CAUTION!**
*Do not attach the screw to the end of the rod segment that has a groove for the attachment of a PTFE spacer.*

1. Use a 2 mm Allen wrench to attach and tighten a HC M4×20 screw at the top of each rod segment (intermediary and end rod segments)
2. Attach a PTFE spacer to the end of each rod segment that has a groove.
3. Attach a pair of lock washers at the top of each rod segment (intermediary and end rod segments)
4. Assemble one of the middle rod segments (with a pair of lock washers on the attached screw) and the signal rod below. Use two 7 mm open-ended wrenches to tighten the assembled parts to a torque of 2...3 Nm.
Part 2: How to assemble the segmented coaxial probe

1. Attach a union nut to each coaxial tube (middle and end tubes)
2. Attach a middle tube segment to the coaxial probe stem. Do not use tools to tighten the assembled parts.
3. Assemble the next middle rod segment (with a pair of lock washers on the attached screw) and the top rod segment. Use two 7 mm open-ended wrenches to tighten the assembled parts to a torque of 2...3 Nm.
4. Assemble the next coaxial tube segment and the top coaxial tube segment. Do not use tools to tighten the assembled parts. Do steps (9) thru (10) again until the end rod segment and end coaxial tube are attached.
5. Use the 2 pipe wrenches to tighten the coaxial tubes in the lock nuts.
6. Use a 2.5 mm Allen wrench to attach and tighten the two HC M5×5 screws (lock screws) to the union nut.

**WARNING!**
Be careful when you use the pipe wrenches. Make sure that the measuring tubes have no deformation.

**CAUTION!**
- Make sure that the screws are tight and the measuring tube cannot loosen.
- Make sure that the fitting for the lock screw is not aligned with a hole in the coaxial tube.
Part 3: How to assemble the segmented coaxial probe

![Diagram of a segmented coaxial probe assembly](image)

**CAUTION!**
*If the lock screw is not tight, the device will not measure correctly.*

1. Use a 2.5 mm Allen wrench to attach and tighten a HC M5×5 screw (lock screw) to the bottom segment of tube.

### 2.10.4 How to install a device with a flange connection

**Equipment needed:**
- Device
- Gasket (not supplied)
- Wrench (not supplied)

![Flange connection diagram](image)

- Make sure that the flange on the nozzle is level.
- Make sure that you use the applicable gasket for the flange and the process.
- Align the gasket correctly on the flange facing of the nozzle.
- Lower the probe carefully into the tank.
- For more data on cable probes, refer to *How to install a cable probe in the tank* on page 34.
- Tighten the flange bolts.
- Refer to local rules and regulations for the correct torque to apply to the bolts.
2.10.5 How to install a device with a threaded connection

Equipment needed:
- Device
- Gasket (not supplied)
- 50 mm / 2” wrench (not supplied)

Make sure the tank connection is level.
Make sure that you use the applicable gasket for the connection and the process.
Align the gasket correctly.
If the device is installed on a tank made of plastic or other non-conductive material, refer to Recommendations for pits and tanks made of non-conductive materials on page 36.
Lower the probe carefully into the tank.
For more data on cable probes, refer to How to install a cable probe in the tank on page 34.
Use 50 mm / 2” wrench to attach the process connection to the tank.
Tighten the nut.
Refer to local rules and regulations for the correct torque to apply to the connection.

INFORMATION!
If there is not sufficient clearance to install the device, remove the housing. Install the probe and then put the housing back on the process connection. For more data, refer to How to turn or remove the signal converter on page 35.
2.10.6 How to install a device with a hygienic connection

**CAUTION!**
Make sure that you do not damage the polished parts.

**INFORMATION!**
To make the cleaning of the antenna easier, attach the device to a short socket.

**Tri-Clamp®**

**Equipment needed:**
- Device with Tri-Clamp® adaptor
- Gasket (not supplied)
- Band clamp (not supplied)

![Tri-Clamp® connection diagram](image)

**Figure 2-34: Tri-Clamp® connection**

1. Tank socket
2. Clamp

- Make sure that the tank connection is level.
- Make sure that you use the applicable gasket for the connection dimensions and the process.
- Align the gasket correctly.
- Lower the device with the Tri-Clamp® adaptor carefully on the tank process connection.
- Attach the band clamp to the process connection.
- Tighten the band clamp.
DIN 11851 Equipment needed:

- Device with a DIN 11851 adaptor
- Gasket (not supplied)
- DIN 11851 nut

Make sure that the tank connection is level.
Make sure that you use the applicable gasket for the connection dimensions and the process.
Align the gasket correctly.
Lower the device with a DIN 11851 adaptor carefully on the tank process connection.
Turn the nut on the device process connection to attach the device to the tank.
Tighten the connection.

Refer to local rules and regulations for the correct torque to apply to the connection.
2.10.7 How to install a cable probe in the tank

Figure 2-36: Wind cable probes and electrical cables carefully

1. Do not wind cable probes less than 400 mm / 16" in diameter.
2. Do not wind the flexible conduit less than 330 mm / 13" in diameter.

**WARNING!**
If you bend the probe too much, you will damage the device and it will not measure accurately.

Figure 2-37: Installation of devices with cable probes

1. >1 m / 3½ ft

- Use two persons to lift the housing and the probe above the process connection.
- Hold the device 1 m / 3½ ft above the tank.
- Unwind the probe carefully into the tank.
2.10.8 How to turn or remove the signal converter

The converter turns 360°. The converter can be removed from the process connection assembly under process conditions.

Figure 2-38: How to turn or remove the signal converter

1. Tool: 5 mm Allen wrench [not supplied] for the lock screw on the signal converter
2. Cover for the coaxial hole on top of the process connection assembly [not supplied]

**CAUTION!**

If you remove the housing, put a cover on the coaxial hole on top of the process connection assembly.
When the housing is attached to the process connection assembly, tighten the lock screw with the 5 mm Allen wrench 1.
2.10.9 Recommendations for pits and tanks made of non-conductive materials

If you have a device with a single rod or a single cable probe and a thread connection, obey these instructions:

- Put a metal sheet between the device and the process connection.
  - It must have a diameter greater than 200 mm / 8”.
- Make sure that the metal sheet is in contact with the thread stop on the device.

We recommend that you use DN≥200 / ≥8” for flange connections.

If you have a device with a double rod, double cable or coaxial probe, you can ignore these instructions.

Figure 2-39: Installation in a non-metallic tank or pit with a thread connection

1. Non-metallic [plastic etc.] tank or pit
2. Metal sheet, Ø ≥200 mm / 8”

CAUTION!

When the device is installed, make sure that the tank roof has no deformation.
2.10.10 Wall support for the remote version

Use marks on the wall to help you put the wall support in the correct position. For more data, refer to "Dimensions and Weights" in the handbook.

Use equipment and tools that agree with health and safety regulations and good engineering practice.

Make sure the wall support is correctly attached to the wall.

2.10.11 How to attach the weather protection to the device

The device and the weather protection option are supplied disassembled in the same box. The weather protection can also be supplied as an accessory. You must attach the weather protection when you install the device.

Figure 2-41: Equipment needed

1. Weather protection cover (with an R-clip to hold the cover on the clamp)
2. Device (with or without the optional display screen)
3. Weather protection clamp (2 parts)
4. 10 mm socket wrench (not supplied)
5. 2 locking nuts
Put the weather protection clamp around the top of the device. Make sure that the locking nuts on the clamp are aligned with the cable entries.

Attach the two locking nuts to the threads on the weather protection clamp. Tighten the locking nuts with a 10 mm socket wrench.

Lower the weather protection cover onto weather protection clamp until the hole for the lock is in the slot at the front of the cover.

Put the R-clip into the hole at the front of the weather protection cover.

End of the procedure.

**INFORMATION!**

*Install the weather protection after you connect the device to the power supply.*
1. Put the weather protection clamp around the front of the device (the end of the device that is nearest to the cable entry). Make sure that the locking nuts on the clamp are aligned with the cable entries.

2. Attach the two locking nuts to the threads on the weather protection clamp. Tighten the locking nuts with a 10 mm socket wrench.

3. Lower the weather protection cover onto weather protection clamp until the hole for the lock is in the slot at the front of the cover.

4. Put the R-clip into the hole at the front of the weather protection cover.

End of the procedure.
The overall dimensions of the weather protection are in “Dimensions and weights” in the handbook.

2.10.12 How to open the weather protection

**INFORMATION!**

*Electrical installation:* Remove the weather protection before you open the terminal compartment cover.

1 Remove the R-clip from the hole at the front of the weather protection cover.
2 Remove the weather protection cover.
3 End of the procedure.
2.11 Electromagnetic compatibility

The device design agrees with the Electromagnetic Compatibility (EMC) Directive and the related European Standard when installed in metallic tanks.

You can install the device on open-air tanks and tanks that are not made of metal. Refer also to the note that follows.

CAUTION!
If you install a device with a rod or cable probe in a non-metallic tank or open-air pit, a strong electromagnetic field near to the device can have an unwanted effect on the accuracy. Use a device with a coaxial probe for this type of installation.

This device meets the essential requirements of the related European Standard:

- Emissions: class A and class B
- Immunity: basic, industrial and controlled environments

INFORMATION!
The device agrees with these conditions if:

- the device has a single or double probe (rod or cable probe) and is used in a closed tank made of metal or
- the device has a coaxial probe.
3.1 Electrical installation: 2-wire, loop-powered

3.1.1 Compact version

Terminals for electrical installation

Figure 3-1: Terminals for electrical installation
1. Grounding terminal in the housing (if the electrical cable is shielded)
2. Current output -
3. Current output +
4. Location of the external grounding terminal (at the bottom of the converter)

**INFORMATION!**

Electrical power to the output terminal energizes the device. The output terminal is also used for HART® communication.

**CAUTION!**
- Use the applicable electrical cables with the cable glands.
- Make sure that the current is not more than 5 A or that there is 5 A-rated fuse in the electrical circuit that energizes the device.
- Make sure that the polarity of the power supply is correct. If the polarity is incorrect, you will not cause damage to the device but the device will not operate.

Open the terminal compartment cover

Figure 3-2: How to open the terminal compartment cover

1. Loosen the lock screw with a 2.5 mm Allen wrench.
2. Turn the cover counterclockwise with a strap wrench.
Remove the cover.

**Equipment needed:**
- Small slotted tip screwdriver (not supplied)

**Procedure:**
1. Do not disconnect the safety cord from the terminal compartment cover. Put the terminal compartment cover adjacent to the housing.
2. Remove the connector from the circuit board.
3. Connect the electrical wires to the connector. Attach the connector to the circuit board. Tighten the cable entry glands.

**Close the terminal compartment cover**

1. Put the cover on the housing and push it down.
2. Turn the cover clockwise until it is fully engaged.
3. Tighten the lock screw.
3.1.2 Remote version

Terminals for electrical installation

Figure 3-5: Terminals for electrical installation
1. Grounding terminal in the housing (if the electrical cable is shielded)
2. Current output -
3. Current output +
4. Location of the external grounding terminal (on the wall support)

**INFORMATION!**
Electrical power to the output terminal energizes the device. The output terminal is also used for **HART®** communication.

**CAUTION!**
- Use the applicable electrical cables with the cable glands.
- Make sure that the current is not more than 5 A or that there is 5 A-rated fuse in the electrical circuit that energizes the device.
- Make sure that the polarity of the power supply is correct. If the polarity is incorrect, you will not cause damage to the device but the device will not operate.

Connections between the remote converter and the probe housing

3.2 Non-Ex devices

Figure 3-7: Electrical connections for non-Ex devices

1. Power supply
2. Resistor for HART® communication
3. Optional connection to the grounding terminal
4. Output: 11.5...30 VDC for an output of 22 mA at the terminal
5. Device

3.3 Devices for hazardous locations

**DANGER!**

*For electrical data for device operation in hazardous locations, refer to the related certificates of compliance and supplementary instructions (ATEX, IECEx, etc.). You can find this documentation on the DVD-ROM delivered with the device or it can be downloaded free of charge from the website [Download Center].*
3.4 Minimum power supply voltage

Use these graphs to find the minimum power supply voltage for a given current output load.

**Non-Ex and Hazardous Location approved (Ex i / IS) devices**

![Graph for Non-Ex and Hazardous Location approved devices](image)

Figure 3-8: Minimum power supply voltage for an output of 22 mA at the terminal (Non-Ex and Hazardous Location approval (Ex i / IS))

Figure 3-9: Minimum power supply voltage for an output of 22 mA at the terminal (Hazardous Location approval (Ex d / XP/NI))

- X: Power supply \( U \) \([VDC]\)
- Y: Current output load \( R_L \) \([\Omega]\)
3.5 Protection category

**INFORMATION!**
The device fulfils all requirements per protection category IP66 / IP67. It also fulfils all requirements per NEMA type 4X (housing) and type 6P (probe).

**DANGER!**
Make sure that the cable gland is watertight.

Figure 3-10: How to make the installation agree with protection category IP67

- Make sure that the gaskets are not damaged.
- Make sure that the electrical cables are not damaged.
- Make sure that the electrical cables agree with the national electrical code.
- The cables are in a loop in front of the device 1 so water does not go into the housing.
- Tighten the cable feedthroughs 2.
- Close unused cable feedthroughs with dummy plugs 3.

Refer to the table that follows for the diameter of the outer sheath of the electrical cable:

**Min. / Max. diameter of the electrical cable**

<table>

1 This electrical cable is connected between the remote converter and the probe housing
3.6 Networks

3.6.1 General information

The device uses the HART® communication protocol. This protocol agrees with the HART® Communication Foundation standard. The device can be connected point-to-point. It can also have a polling address of 1 to 63 in a multi-drop network.

The device output is factory-set to communicate point-to-point. To change the communication mode from point-to-point to multi-drop, refer to "Network configuration" in the handbook.

3.6.2 Point-to-point networks

![Point-to-point network diagram](image)

7. Engineering or operator workstation (Control tool / Class 2 master device)
4.1 General notes

For more data about device configuration, refer to the handbook.

4.2 Digital display screen

4.2.1 Local display screen layout

![Local display screen layout in Normal mode]

Figure 4-1: Local display screen layout in Normal mode

- 1. Current output percentage (bar graph and text — only shown if the current output function is the same as the measurement on the screen in normal mode)
- 2. Measurement type (in this example, distance)
- 3. Device status (NE 107 symbols)
- 4. Device tag name
- 5. Updated measurement data symbol (the symbol flashes each time the measurement data is updated)
- 6. Measurement value and units
- 7. Device status [markers]
- 8. Keypad buttons (refer to the table in the section that follows)

4.2.2 Functions of keypad buttons

<table>
<thead>
<tr>
<th>Keypad button</th>
<th>Function</th>
</tr>
</thead>
</table>
| ![Right]      | **Normal mode:** Enter Information menu (Enter Configuration mode)  
**Configuration mode:** Move cursor to the right |
| ![Return / Escape] | **Normal mode:** Change units [m, cm, mm, in, ft]  
**Configuration mode:** Exit |
| ![Down] | **Normal mode:** Change measurement type [distance, level, output [%], output [mA], conversion, ullage conversion]  
**Configuration mode:** Decrease value or change parameter |
| ![Up] | **Normal mode:** Change measurement type [distance, level, output [%], output [mA], conversion, ullage conversion]  
**Configuration mode:** Increase value or change parameter |

If you have made a strapping table in menu item 2.8.1 INPUT TABLE for volume or mass measurement, “Conversion” and “Ullage Conv.” will be shown in the list of measurement types.

For data on keypad functions, refer to the Operation section in the handbook.
4.3 Commissioning

Use this procedure to change the probe length and give the top and bottom measuring limits. Values and parameters that can be changed are shown between « ... » in the illustrations that follow. Push the keypad buttons in the correct sequence:

**CAUTION!**
Make sure that you do this procedure before you use the device. The settings in this procedure have an effect on the performance of the device.

### Procedure

<td></td>
</tr>
</tbody>
</table>
4.4 Probe length calculation

**CAUTION!**
- Make sure that you do this procedure before you use the device.
- If you decrease the probe length, do the probe length calculation procedure before the snapshot procedure.
- The probe length cannot be less than 600 mm / 23.6” for coaxial probes and 1000 mm / 39.4” for other probe types.
- Make sure that the tank is empty or only filled to the minimum level.
- Make sure that there are no objects adjacent to the probe. For more data about empty space, refer to General requirements on page 16.

Do this quick set-up procedure (menu item 2.1.3) if:

- it is the first time that the device is used,
- the probe length was changed or
- the signal converter was replaced.

When you do this procedure, the device automatically calculates and records the probe length.

Values and parameters that can be changed are shown between the « ... » marks in the illustrations that follow. Push the keypad buttons in the correct sequence:

**Procedure**

<table>
<thead>
<tr>
<th>Screen</th>
<th>Steps</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><img src="image" alt="Default screen." /></td>
<td>• [□], [▼] and [△].</td>
<td>Default screen. Enter configuration mode (2.0.0 SUPERVISOR).</td>
</tr>
<tr>
<td><img src="image" alt="Enter the password." /></td>
<td>• [□], [▲], [▼], [△], [▲] and [▲].</td>
<td>Enter the password (the default password is shown). If it is necessary to change the password, refer to the handbook.</td>
</tr>
<tr>
<td><img src="image" alt="Is your tank partially filled or empty?" /></td>
<td>• [□], [▲], [△] and [▲]</td>
<td>Is your tank partially filled or empty? If the tank is partially filled, the procedure will not start.</td>
</tr>
<tr>
<td><img src="image" alt="The device measures the new probe length." /></td>
<td>• [□] for the selection of “Partially filled” or [△] for the selection of “Empty”.</td>
<td>The device measures the new probe length. If the display screen shows the error message “Failure! Pulse Lost” then speak to the supplier.</td>
</tr>
</tbody>
</table>
If the probe length calculated in this procedure is much shorter than the real probe length, then do the procedure that follows:

- Go to menu item 2.3.6 DETECT.DELAY in the supervisor menu.
- Record the initial value.
  - Is the initial value the same as 2.3.2 BLOC. DIST.?
- If the initial value is different, change the value to the blocking distance in menu item 2.3.2 BLOC. DIST..
- Do the probe length calculation procedure again.
- After you complete the procedure, change the value back to its initial setting.

For more data about menu items, refer to the handbook.
4.5 Snapshot

The snapshot procedure is very important for the performance of the device. Make sure that the tank is empty or only filled to the minimum level before you do the procedure.

Use this procedure (menu item 2.1.2) if there are objects adjacent to the probe that can cause parasitic signals. The device does a scan for objects that do not change their vertical positions in the tank (heating tubes, agitators, fuel assemblies etc.) and records the data. The device can then use this data to put the measurement signal through a filter [Dynamic Parasite Rejection].

**INFORMATION!**

*Dynamic Parasite Rejection* (DPR) is a function that automatically puts parasitic signals through a signal filter. Parasitic signals are caused by internal vessel installations or build-up on the probe during normal operation. Use the DPR function to get the best possible performance during level measurement. To use the device with the DPR function, do the snapshot procedure (refer to menu item 2.1.2). During this procedure, the software finds, marks, and saves all parasitic signals.

When the device is in DPR mode (when menu item 2.5.11 SNAPSHOT MOD. is set to "static" or "static and dynamic"), it will automatically update this data to ignore old and new parasitic signals. Thus, it is not necessary to do the snapshot procedure again. Because the device records the data from the SNAPSHOT procedure (for "static" or "static and dynamic" modes), it is also not necessary to do the procedure again if you de-energize the device.

**CAUTION!**

- If you decrease the probe length, do the probe length calculation procedure before the snapshot procedure.
- Make sure that the tank is empty or only filled to the minimum level.
- Make sure that there are no objects adjacent to the probe. For more data about empty space, refer to General requirements on page 16.

Before you do the snapshot procedure, install the device on the tank. For more data about how to install the device, refer to the handbook.

Values and parameters that can be changed are shown between the « ... » marks in the illustrations that follow. Push the keypad buttons in the correct sequence:
