5 Notes
Warnings and symbols used

**DANGER!**
This information refers to the immediate danger when working with electricity.

**DANGER!**
These warnings must be observed without fail. Even partial disregard of this warning can lead to serious health problems and even death. There is also the risk of seriously damaging the device or parts of the operator’s plant.

**WARNING!**
Disregarding this safety warning, even if only in part, poses the risk of serious health problems. There is also the risk of damaging the device or parts of the operator’s plant.

**CAUTION!**
Disregarding these instructions can result in damage to the device or to parts of the operator’s plant.

**INFORMATION!**
These instructions contain important information for the handling of the device.

**HANDLING**

- This symbol designates all instructions for actions to be carried out by the operator in the specified sequence.

  **RESULT**
  This symbol refers to all important consequences of the previous actions.

Safety instructions for the operator

**CAUTION!**
Installation, assembly, start-up and maintenance may only be performed by appropriately trained personnel. The regional occupational health and safety directives must always be observed.

**LEGAL NOTICE!**
The responsibility as to the suitability and intended use of this device rests solely with the user. The supplier assumes no responsibility in the event of improper use by the customer. Improper installation and operation may lead to loss of warranty. In addition, the “Terms and Conditions of Sale” apply which form the basis of the purchase contract.

**INFORMATION!**

- Further information can be found on the supplied CD-ROM in the manual, on the data sheet, in special manuals, certificates and on the manufacturer’s website.
- If you need to return the device to the manufacturer or supplier, please fill out the form contained on the CD-ROM and send it with the device. Unfortunately, the manufacturer cannot repair or inspect the device without the completed form.
2.1 Scope of delivery

**INFORMATION!**
Do a check of the packing list to make sure that you have all the elements given in the order.

**INFORMATION!**
Inspect the packaging carefully for damages or signs of rough handling. Report damage to the carrier and to the local office of the manufacturer.

**INFORMATION!**
The field device will arrive in two cartons. One carton contains the converter and one carton contains the sensor.

**INFORMATION!**
Make sure to combine the sensor and the converter correctly, so they match by the devices serial number.

![Figure 2-1: Scope of delivery](image)

1. Ordered flowmeter
2. Product documentation
3. Factory calibration certificate
4. CD-ROM with product documentation in available languages
5. Signal cable (remote versions only)

**INFORMATION!**
Assembly materials and tools are not part of the delivery. Use the assembly materials and tools in compliance with the applicable occupational health and safety directives.
2.2 Device description

This ultrasonic flowmeter is designed for the continuous measurement of actual volume flow, mass flow, flow speed, velocity of sound, gain, SNR and diagnosis value. Exclusively for bi-directional measuring of conductive and/or non-conductive fluids in closed, completely filled pipeline circuits.

Your measuring device is supplied ready for operation. The factory settings for the operating data have been made in accordance with your order specifications.

**INFORMATION!**
Product specific information and extensive product specification is available using PICK, the Product Information Center KROHNE web-tool. PICK can be found via the service menu button on the KROHNE.com website.

The following versions are available:
- Compact version (the signal converter is mounted directly on the measuring sensor)
- Remote version (electrical connection to the measuring sensor via signal cable)
2.3 Nameplates

**INFORMATION!**

Look at the device nameplate to ensure that the device is delivered according to your order. Check for the correct supply voltage printed on the nameplate.

2.3.1 Example of nameplate for the compact version

![Example of nameplate for the compact version](image)

- Ambient temperature
- MI004 approval number and specific data
- Tag number and CE sign with number(s) of notified body / bodies
- PED data, Category I / II / III or SEP
- Mains supply data
- Electronic revision number
- Manufacturer website / GK & size info
- Type designation of the flowmeter
- Name and address of the manufacturer

2.3.2 Nameplate for the measuring sensor (field version)

Examples for measuring sensor versions in Standard MI-004 version.

![Nameplate for the measuring sensor](image)

1. Ambient temperature
2. MI-004 approval number and certified data
3. Tag number
4. CE sign & manufacturer and MI004 notified body data
5. Protection class, size and GK information
6. Type designation of the flowmeter
7. Name and address of the manufacturer
2.3.3 Examples of nameplates on the signal converter (field version)

Figure 2-3: Examples of nameplates on the signal converter (field version)

1. Ambient temperature
2. MI004 approval number and certified data
3. Tag number
4. Protection class
5. Mains supply data
6. Electronics revision number
7. Calibration, size and Gk data
8. Manufacturer website
9. Type designation of the flowmeter and CE sign with number(s) of notified body / bodies
10. Name and address of the manufacturer

Electrical connection data of inputs/outputs (example of basic version)

1. Power supply (AC: L and N, DC: L+ and L-, PE for ≥ 24V AC, FE for ≤ 24 VAC and DC)
2. Connection data of connection terminal D/D-
3. Connection data of connection terminal C/C-
4. Connection data of connection terminal B/B-
5. Connection data of connection terminal A/A-, A+ only operable in basic version

- A = active mode; the signal converter supplies the power for connection of the subsequent devices
- P = passive mode; external power supply required for operation of the subsequent devices
- N/C = connection terminals not connected
2.4 Storage

- Store the device in a dry, dust-free location.
- Avoid continuous direct sunlight.
- Store the device in its original packaging.
- Storage temperature: -50...+70°C / -58...+158°F

2.5 Transport

Signal converter
- Do not lift the signal converter by the cable glands.

Measuring sensor
- Do not lift the measuring sensor by the connection box.
- Use hoisting belts only.
- To transport flange devices, use lifting straps. Wrap these around both process connections.
2.6 Pre-installation requirements

**INFORMATION!**
To assure a quick, safe and uncomplicated installation, we kindly request you to make provisions as stated below.

Make sure that you have all necessary tools available:
- Allen key (4 mm)
- Small screwdriver
- Wrench for cable glands
- Wrench for pipe mounting bracket (remote version only) see on page 16
- Torque wrench for installing flowmeter in pipeline

2.7 General requirements

**INFORMATION!**
The following precautions must be taken to ensure reliable installation.
- Make sure that there is adequate space to the sides.
- Protect the signal converter from direct sunlight and install a sun shade if necessary.
- Signal converters installed in control cabinets require adequate cooling, e.g. by fan or heat exchanger.
- Do not expose the signal converter to intense vibration. The flowmeters are tested for a vibration level in accordance with IEC 68-2-6.

2.7.1 Vibration

![Figure 2-5: Avoid vibrations](image)

**INFORMATION!**
In case of expected vibrations, please install a field version.
2.8 Installation conditions

2.8.1 Inlet and outlet

Figure 2-6: Recommended inlet and outlet
① Refer to chapter “Bends in 2 or 3 dimensions”
② ≥ 3 DN

2.8.2 Bends in 2 or 3 dimensions

Figure 2-7: Inlet when using 2 and/or 3 dimensional bends in front of the flowmeter
Inlet length: using bends in 2 dimensions: ≥ 10 DN; when having bends in 3 dimensions: ≥ 15 DN

2.8.3 T-section

Figure 2-8: Distance behind a T-section
① ≥ 10 DN
2.9 Bends

![Figure 2-9: Installation in bending pipes](image1)

![Figure 2-10: Installation in bending pipes](image2)

2.10 Open feed or discharge

![Figure 2-11: Open discharge](image3)

Install meter on a lowered section of the pipe to ensure a full pipe condition through the meter.
2.11 Position of pump

**CAUTION!**
Never install flowmeter at a pump suction side in order to avoid cavitation or flashing in the flowmeter.

![Figure 2-12: Position of pump](image)

\[ \geq 15 \text{ DN} \]

2.12 Control valve

![Figure 2-13: Installation in front of a control valve](image)

\[ \geq 20 \text{ DN} \]
2.13 Down going pipeline over 5 m /16 ft length

Install air vent downstream of the flowmeter to prevent vacuum. Although this will not harm the meter, it may cause gases to come out of solution [cavitate] and interfere with proper measurements.

![Diagram of a down going pipeline over 5 m /16 ft length with an air vent downstream]

**Figure 2-14: Down going pipeline over 5 m /16 ft length**

- ① ≥ 5 m /16 ft
- ② Install air vent

2.14 Insulation

![Diagram of a flow sensor with a connection box and insulation area]

**Figure 2-15: Insulation**

- ① Connection box
- ② Insulation area

**WARNING!**

*The flow sensor can be insulated completely, except for the connection box. [Ex: maximum temperature, refer to Ex supplement]*

For devices used in hazardous area, additional maximum temperature and insulation precautions apply. Please refer to the Ex documentation!
2.15 Mounting

2.16 Rotation of the compact converter housing

**CAUTION!**

**Installing certified devices for hazardous areas**

- DO NOT change the position of the converter housing of compact versions
- When not following this warning, there is a very high risk of damaging the internal cables of the device.

**Installing devices for non-hazardous areas**

Rotating the converter more than 90° relative to the sensor, is not recommended by the manufacturer.

2.17 Flange deviation

**CAUTION!**

Max. permissible misalignment of pipe flange faces: \( M_{\text{max}} \) 0.5 degree, according ASME B16.5 Individual flanges. See Appendix 12; Flange face alignment of the General Piping Requirements DEP 31.38.01.11-GEN

![Figure 2-16: Flange deviation](image)
2.18 Mounting position

![Figure 2-17: Horizontal and vertical mounting](image)

2.19 Mounting the field housing, remote version

**INFORMATION!**
Assembly materials and tools are not part of the delivery. Use the assembly materials and tools in compliance with the applicable occupational health and safety directives.

2.19.1 Pipe mounting

![Figure 2-18: Pipe mounting of the field housing](image)

1. Fix the signal converter to the pipe.
2. Fasten the signal converter using standard U-bolts and washers.
3. Tighten the nuts.
2.19.2 Turning the display of the field housing version

The display of the field housing version can be turned in 90° increments

1. Unscrew the cover from the display and operation control unit.
2. Using a suitable tool, pull out the two metal puller devices to the left and right of the display.
3. Pull out the display between the two metal puller devices and rotate it to the required position.
4. Slide the display and then the metal puller devices back into the housing.
5. Re-fit the cover and tighten it by hand.

CAUTION!
The ribbon cable of the display must not be folded or twisted repeatedly.

INFORMATION!
Each time a housing cover is opened, the thread should be cleaned and greased. Use only resin-free and acid-free grease.
Ensure that the housing gasket is properly fitted, clean and undamaged.
3.1 Safety instructions

**DANGER!**
All work on the electrical connections may only be carried out with the power disconnected. Take note of the voltage data on the nameplate!

**DANGER!**
Observe the national regulations for electrical installations!

**DANGER!**
For devices used in hazardous areas, additional safety notes apply; please refer to the Ex documentation.

**WARNING!**
Observe without fail the local occupational health and safety regulations. Any work done on the electrical components of the measuring device may only be carried out by properly trained specialists.

**INFORMATION!**
Look at the device nameplate to ensure that the device is delivered according to your order. Check for the correct supply voltage printed on the nameplate.

3.2 Signal cable (remote versions only)

The flow sensor is connected to the signal converter via one signal cable, with 2, 4 or 6 (labeled) inner coax cables for the connection of maximal three acoustic paths.

![Diagram of field version](image)

**Figure 3-1: Construction of field version**

1. Signal converter
2. Open connection box
3. Tool for releasing connectors
4. Marking on cable
5. Insert cable[s] into terminal compartment
CAUTION!
To ensure smooth functioning, always use the signal cable(s) included in the delivery.

Figure 3-2: Clamp the cables on the shielding bush

- Cables
- Cable glands
- Grounding clamps
- Cable with metal shielding bush

INFORMATION!
Connect the cable on connector with similar numeral marking

3.3 Power supply

WARNING!
When this device is intended for permanent connection to the mains. It is required (for example for service) to mount an external switch or circuit breaker near the device for disconnection from the mains. It shall be easily reachable by the operator and marked as the disconnecting the device for this equipment. The switch or circuit breaker and wiring has to be suitable for the application and shall also be in accordance with the local (safety) requirements of the (building) installation (e.g. IEC 60947-1/-3)

INFORMATION!
For devices used in hazardous areas, additional safety notes apply; please refer to the Ex documentation.

INFORMATION!
The power terminals in the terminal compartments are equipped with additional hinged lids to prevent accidental contact.
3 ELECTRICAL CONNECTIONS

OPTISONIC 3400

100...230 VAC (tolerance range: -15% / +10%), 22 VA
24 VDC (-55% / +30%) 12 W
24 VAC/DC (AC: -15% / +10%; DC: -25% / +30%), 22 VA or 12 W

DANGER!
The device must be grounded in accordance with regulations in order to protect personnel against electric shocks.

100...230 VAC (tolerance range: -15% / +10%)
- Note the power supply voltage and frequency (50...60 Hz) on the nameplate.
- The protective ground terminal PE of the power supply must be connected to the separate U-clamp terminal in the terminal compartment of the signal converter.

INFORMATION!
240 VAC+5% is included in the tolerance range.

3.4 Laying electrical cables correctly

Figure 3-3: Protect housing from dust and water

1. Lay the cable in a loop just before the housing.
2. Tighten the screw connection of the cable entry securely.
3. Never mount the housing with the cable entries facing upwards.
4. Seal cable entries that are not needed with a plug.
3.5 Inputs and outputs, overview

3.5.1 Combinations of the inputs/outputs (I/Os)

This signal converter is available with the input/output combinations.

**Basic version**
- Has 1 current output, 1 pulse output and 2 status outputs / limit switches.
- The pulse output can be set as status output/limit switch and one of the status outputs as a control input.

**Modular version**
- Depending on the task, the device can be configured with various output modules.

**Ex option**
- For hazardous areas, all of the input/output variants for the housing designs C and F with terminal compartment in the Ex d (pressure-resistant casing) or Ex e (increased safety) versions can be delivered.
- Please refer to the separate instructions for connection and operation of the Ex-devices.

3.5.2 Description of the CG-number

![Figure 3-4: Marking (CG number) of the electronics module and input/output variants](image)

<table>
<thead>
<tr>
<th>Abbreviation</th>
