1.1 The radar solution for liquids

This device is a non-contact Radar (FMCW) Level Meter for distance, level, volume and mass measurement of liquids, pastes and slurries. It gives a stabler measurement than pulse radar and is well suited to agitated process conditions. The device can operate at very low and very high process temperatures as long as the process connection temperature limits are observed.

- ① Optional touch screen with 4-button operation
- ② 2-wire level meter
- ③ One converter for all applications
- ④ Stainless steel horn, PTFE/PP Drop or PEEK Hygienic antenna
- ⑤ Antenna extension (for long nozzles)
- ⑥ Optional Metaglas® barrier
- ⑦ Rotatable housing
- ⑧ One converter for all applications

Highlights

- ± 3 mm / ± 0.12 " standard accuracy
- Optionally equipped with a 4-button touch screen display and an easy-to-use setup wizard
- Reliable measurement in difficult process conditions
- Operates up to a process connection temperature of $+200^{\circ}\text{C}$ / $+390^{\circ}\text{F}$ and 100 barg / 1450 psig for standard applications, and up to $+570^{\circ}\text{C}$ / $+1058^{\circ}\text{F}$ for molten salt applications
- Measuring range up to 80 m / 260 ft
- Horn and Drop antenna versions can be extended to suit any nozzle length
- Drop antenna for corrosive liquids (with optional PTFE/PP flange plate) or where product build-up is likely to occur
- Sealed Drop antenna extension option for pressurized tanks
- Hygienic antenna for processes where stringent hygiene standards must be obeyed
- PACTware and DTMs included as standard
- Optional second current output
- Directly-accessible graphic touchscreen/wizard (option)
- Converter rotates 360°
- Triple barrier gas-tight protection available for working with dangerous gases (using pre-stressed fused glass)
- Fast motion software that can measure 5 times per second for wave height measurement

Industries

- Chemicals
- Food & Beverage
- Oil & Gas
- Petrochemicals
- Pharmaceutical
- Pulp & Paper
- Water & Wastewater

Applications

- Tanks with agitators
- Process tanks
- Storage tanks
- Torpedo ladles (foundries)
- Wave height

1.2 Applications

1. Level measurement of liquids in storage tanks

The level transmitter can measure the level of a wide range of liquid products on a large variety of installations, including LPG and LNG tanks. It does not require calibration or commissioning when installed. It can measure any liquid within the stated pressure and temperature range, and distances up to 80 m / 260 ft.

2. Level measurement of liquids in process tanks

The level transmitter can measure level accurately in agitated conditions, such as near to vortexes caused by agitators, and also where foam is present.

3. Wave height measurement

The fast motion software option permits the device to measure 5 times per second. The device can follow fast changes in the height of surface waves in oceans and lakes. This software also permits the device to monitor torpedo ladle filling operations in steel mills.

4. Open channel metering or flow

The level transmitter can measure level in an open channel and convert this measurement into flow values if the characteristics of the channel are known. This solution is the high-end alternative to ultrasonic and hydrostatic pressure transmitters.

5. Measurement of liquids in a bypass chamber

If the tank is full of obstructions such as agitators and reinforcements, we recommend installing the radar level transmitter in a bypass chamber or a stilling well. This solution is also available from us under the name BM 26 W. The BM 26 W combines the BM 26 A with the radar level transmitter. The device includes a permanent, local indication without a power supply. Please refer to the BM 26 W documentation for further information.

6. Measurement of corrosive liquids with a Drop antenna

The Drop antenna option combines a relatively small radar beam for more precise measurement and a shape that avoids product build-up. If the tank contains corrosive liquids such as acids and alkaline solutions, we recommend the DN80 / 3" Drop antenna with the PTFE or PP flange plate protection option.

7. Measurement of liquids with a Hygienic antenna

The Hygienic antenna option is made of materials that agree with FDA regulations. It is suitable for level measurement in processes that require hygienic equipment (such as the food, beverage and pharmaceutical industries).

1.3 Measuring principle

A radar signal is emitted via an antenna, reflected from the product surface and received after a time t . The radar principle used is FMCW (Frequency Modulated Continuous Wave).

The FMCW-radar transmits a high frequency signal whose frequency increases linearly during the measurement phase (called the frequency sweep). The signal is emitted, reflected on the measuring surface and received with a time delay, t . Delay time, $t=2d/c$, where d is the distance to the product surface and c is the speed of light in the gas above the product.

For further signal processing the difference Δf is calculated from the actual transmitted frequency and the received frequency. The difference is directly proportional to the distance. A large frequency difference corresponds to a large distance and vice versa. The frequency difference Δf is transformed via a Fourier transformation (FFT) into a frequency spectrum and then the distance is calculated from the spectrum. The level results from the difference between tank height and measuring distance.

2.1 Technical data

- *The following data is provided for general applications. If you require data that is more relevant to your specific application, please contact us or your local sales office.*
- *Additional information (certificates, special tools, software,...) and complete product documentation can be downloaded free of charge from the website (Download Center).*

Measuring system

Measuring principle	2-wire loop-powered level transmitter; K-band (24...26 GHz) FMCW radar
Application range	Level measurement of liquids, pastes and slurries
Primary measured value	Δf (change in frequency) between the emitted and received signal
Secondary measured value	Distance, level, volume, mass and reflectivity

Design

Construction	The measurement system consists of a measuring sensor (antenna) and a signal converter which is only available in a compact version
Options	Integrated LCD display with sun cover (-20...+60°C / -4...+140°F); if the ambient temperature is not in these limits, the display switches off
	2nd current output
	Fast motion software (5 measurements per second)
	PTFE/PP flange plate protection (for Drop antennas without antenna extensions only)
	Distance piece (for process connection temperature: +150...+200°C / +300...+390°F) ①
	Antenna purging system (supplied with a ¼ NPTF connection)
Accessories	Weather protection
	Antenna extensions of 105 mm / 4.1" length (Max. length for Drop antenna versions: 525 mm / 20.7"; not available for the Hygienic antenna)
	Discs (low-pressure flanges) with bolt hole dimensions and positions that agree with DN80...200 in PN2.5...40 or 3"...8" in 150 lb for devices with the G 1½ threaded connection. Max. pressure: 1 barg / 14.5 psig at +20°C / +68°F.
Max. measuring range	80 m / 260 ft
	Depends on the antenna option, dielectric constant of the product and installation type. Refer also to "Antenna selection".
Min. tank height	0.2 m / 8" (1 m / 40" for hygienic antenna)
Max. change in level	Standard software: 1...10 m/minute / 3.3...32.8 ft/minute
	Fast motion software: The device uses strongest signal in the measuring range to calculate the distance for each measurement cycle. The menu item for tracing velocity is available, but the function is disabled and changes have no effect on the performance of the device.
Min. dead zone	Antenna extension length + antenna length + 0.1 m / 4" (200 mm / 8" for the hygienic antenna)

Beam angle of antenna	Horn DN40 / 1.5": 20°
	Horn DN50 / 2": 15°
	Horn / Sheet metal horn DN80 / 3": 10°
	Horn / Sheet metal horn DN100 / 4": 8°
	Sheet metal horn DN150 / 6": 6°
	Sheet metal horn DN200 / 8": 4°
	Drop DN80 / 3": 8°
	Drop DN150 / 6": 4°
Hygienic DN50 / 2": 15°	
Display and user interface	
Display	LCD display
	9 lines, 160 × 160 pixels in 8-step grayscale with 4-button keypad
Interface languages	English, German, French, Italian, Spanish, Portuguese, Japanese, Simplified Chinese and Russian

Measuring accuracy

Resolution	1 mm / 0.04"
Repeatability	±1 mm / ±0.04"
Accuracy	±3 mm / ±0.12", when distance < 10 m / 33 ft; ±0.03% of measured distance, when distance > 10 m / 33 ft
Reference conditions acc. to EN 60770	
Temperature	+20°C ±5°C / +70°F ±10°F
Pressure	1013 mbara ±20 mbar / 14.69 psia ±0.29 psi
Relative air humidity	60% ±15%
Target	Metal plate in an anechoic chamber

Operating conditions

Temperature	
Ambient temperature	-40...+80°C / -40...+175°F (according to the temperature limits of the gasket material. Refer to "Materials" in this table.) Ex: see supplementary operating instructions or approval certificates
Storage temperature	-40...+85°C / -40...+185°F
Process connection temperature	Horn / Sheet metal horn antenna: Standard: -50...+150°C / -58...+300°F Option: -50...+200°C / -58...+390°F (the process connection temperature must agree with the temperature limits of the gasket material. Refer to "Materials" in this table.) Ex: see supplementary operating instructions or approval certificates
	Drop antenna (PTFE): -50...+150°C / -58...+300°F (the process connection temperature must agree with the temperature limits of the gasket material. Refer to "Materials" in this table.) Ex: see supplementary operating instructions or approval certificates
	Drop antenna (PP): -40...+100°C / -40...+210°F (the process connection temperature must agree with the temperature limits of the gasket material. Refer to "Materials" in this table.) Ex: see supplementary operating instructions or approval certificates
	Hygienic antenna (PEEK): -20...+150°C / -4...+300°F (the process connection temperature must agree with the temperature limits of the gasket material. Refer to "Materials" in this table.) Ex: see supplementary operating instructions or approval certificates

Pressure	
Operating pressure	Drop antenna (PP): -1...16 barg / -14.5...232 psig; subject to process connection used and flange temperature
	Drop antenna (PTFE): -1...40 barg / -14.5...580 psig; subject to process connection used and flange temperature
	Hygienic antenna (PEEK): -1...10 barg / -14.5...145 psig; subject to process connection used and flange temperature
	Horn / Sheet metal horn antenna: Standard: -1...40 barg / -14.5...580 psig; Option: -1...100 barg / -14.5...1450 psig; subject to process connection used and flange temperature
Other conditions	
Dielectric constant $\{\epsilon_r\}$	≥ 1.5
Vibration resistance	IEC 60068-2-6 and EN 50178 (10...57 Hz: 0.075 mm / 57...150 Hz: 1g)
Ingress protection	IP66/67 equivalent to NEMA type 4X (housing) and type 6P (antenna)

Installation conditions

Process connection size	The nominal diameter (DN) should be equal to or larger than the antenna diameter. If the nominal diameter (DN) is smaller than the antenna, either: – provide the means to adapt the device to a larger process connection on the tank (for example, a plate with a slot), or – use the same process connection, but remove the antenna from the device before installation and fit it from inside the tank.
Process connection position	Make sure that there are not any obstructions directly below the process connection for the device.
Dimensions and weights	Refer to "Technical data: Dimensions and weights".

Materials

Housing	Standard: Polyester-coated aluminium
	Option: Stainless steel (1.4404 / 316L) ②
Wetted parts, including antenna	Standard for Horn / Sheet metal horn antenna: Stainless steel (1.4404 / 316L)
	Option for Horn antenna: Hastelloy® C-22® (2.4602) ③
	Standard for Drop antenna: PTFE; PP
	Option for Drop antenna: PP or PTFE flange plate protection
	Hygienic antenna: PEEK – this material agrees with FDA regulations
Process connection	Standard for Horn, Sheet metal horn and Drop antennas: Stainless steel (1.4404 / 316L) – a PP or PTFE flange plate protection option is also available for the Drop antenna Standard for Hygienic antenna: Stainless steel (1.4404 / 316L)
	Option: Hastelloy® C-22® (2.4602) – for Horn antennas only
Gaskets (and O-rings for the sealed antenna extension option)	Hygienic antenna: EPDM (-20°C...+150°C / -4...+300°F); FKM/FPM (-20...+150°C / -4...+300°F)
	PTFE Drop antenna: FKM/FPM (-40...+150°C / -40...+300°F); Kalrez® 6375 (-20...+150°C / -4...+300°F); EPDM (-50°C...+150°C / -58...+300°F) ④
	PP Drop antenna: FKM/FPM (-40...+100°C / -40...+210°F); Kalrez® 6375 (-20...+100°C / -4...+210°F); EPDM (-40°C...+100°C / -40...+210°F) ④
	Horn / Sheet metal horn antenna: FKM/FPM (-40...+200°C / -40...+390°F); Kalrez® 6375 (-20...+200°C / -4...+390°F); EPDM (-50°C...+150°C / -58...+300°F) ④

Feedthrough	Standard: PEI (-50...+200°C / -58...+390°F – max. range. The feedthrough temperature limits must agree with the temperature limits of the gasket material and antenna type. If the distance piece option is not attached, the maximum temperature is +150°C / +300°F.)
	Option: Metaglas® (-30...+200°C / -22...+390°F – max. range. The feedthrough temperature limits must agree with the temperature limits of the gasket material and antenna type. If the distance piece option is not attached, the maximum temperature is +150°C / +300°F.) ⑤
Weather protection (Option)	Stainless steel (1.4301 / 304)

Process connections

Thread	G 1½ (ISO 228); 1½ NPT (ASME B1.20.1)
Flange version	
EN 1092-1	DN40...80 in PN40 (Type B1), DN100...200 in PN16 or PN40 (Type B1), DN40...150 in PN63 or PN100 (Type B1); others on request Optional flange facing: Types C, D, E and F
ASME B16.5	1½"...8" in 150 lb RF, 1½"...6" in 300 lb RF, 1½"...4" in 600 lb or 900 lb RF; 1½"...2" in 1500 lb RJ; others on request Optional flange facing: RJ (Ring Joint)
JIS B2220	40...100A in 10K; others on request
Hygienic	BioControl® DN50; Tri-Clamp® 2"; DIN 11851 DN50; SMS 51; VARIVENT® DN50; others on request ⑥
Other	Others on request

Electrical connections

Power supply	Terminals output 1 – Non-Ex / Ex i: 14...30 VDC; min./max. value for an output of 22 mA at the terminal
	Terminals output 1 – Ex d: 20...36 VDC; min./max. value for an output of 22 mA at the terminal
	Terminals output 2 – Non-Ex / Ex i / Ex d 10...30 VDC; min./max. value for an output of 22 mA at the terminal (additional power supply needed – output only)
Cable entry	M20×1.5; ½ NPT
	G ½ (not for FM- and CSA-approved devices. Not for stainless steel housings.)
	Stainless steel housings: M20×1.5
Cable gland	Standard: none
	Options: M20×1.5; others are available on request
Cable entry capacity (terminal)	0.5...1.5 mm²

Input and output

Current output (standard software)	
Output signal (Output 1)	4...20 mA HART® or 3.8...20.5 mA acc. to NAMUR NE 43 ⑦
Output signal (Output 2 – optional)	4...20 mA (no HART® signal) or 3.8...20.5 mA acc. to NAMUR NE 43
Current output (fast motion software option)	
Output signal (Output 1)	16 mA HART® ⑦
Output signal (Output 2)	4...20 mA (no HART® signal) or 3.8...20.5 mA acc. to NAMUR NE 43

Resolution	±3 µA
Temperature drift	Typically 50 ppm/K
Error signal	High: 22 mA; Low: 3.6 mA acc. to NAMUR NE 43

Approvals and certification

CE	This device fulfils the statutory requirements of the EC directives. The manufacturer certifies successful testing of the product by applying the CE mark.

- ⑧ Ex ia and Ex iaD approvals are pending for the hygienic antenna option
- ⑨ This approval does not include the hygienic antenna option

2.2 Antenna selection

The graphs below show which antenna to select for the application based on:

- D, the measuring range,
- ϵ_r , is the dielectric constant of the product being measured

Figure 2-1: Selection of antenna for liquid applications (graph of distance in m against ϵ_r)

Figure 2-2: Selection of antenna for liquid applications (graph of distance in ft against ϵ_r)

- ① Distance, D [m]
- ② Distance, D [ft]
- ③ Dielectric constant (ϵ_r) range for storage/still well applications
- ④ Dielectric constant (ϵ_r) range for process/agitator applications
- ⑤ DN80, DN100, DN150 or DN200 Horn antenna with a still well, or DN150 or DN200 Horn antenna without a still well
- ⑥ DN80, DN100, DN150 or DN200 Horn antenna with or without a still well, or DN80 or DN150 Drop antenna without a still well
- ⑦ DN40, DN50, DN80, DN100, DN150 or DN200 Horn antenna with or without a still well, DN80 or DN150 Drop antenna without a still well or Hygienic antenna

2.3 Guidelines for maximum operating pressure

Make sure that the devices are used within their operating limits.

Figure 2-3: Pressure / temperature de-rating (EN 1092-1), flange and threaded connection, in °C and barg

Figure 2-4: Pressure / temperature de-rating (EN 1092-1), flange and threaded connections, in °F and psig

- ① p [barg]
- ② T [°C]
- ③ p [psig]
- ④ T [°F]
- ⑤ Threaded connection, G (ISO 228-1)
- ⑥ Flange connection, PN100
- ⑦ Flange connection, PN63
- ⑧ Flange connection, PN40
- ⑨ Flange connection, PN16

CRN certification

There is a CRN certification option for devices with process connections that agree with ASME standards. This certification is necessary for all devices that are installed on a pressure vessel and used in Canada.

Figure 2-5: Pressure / temperature de-rating (ASME B16.5), flange and threaded connections, in °C and barg

① If fitted with standard cable glands

3.1 Intended use

This radar level transmitter measures distance, level, mass, volume and reflectivity of liquids, pastes and slurries.

It can be installed on tanks, reactors and open channels.

3.2 Pre-installation requirements

Obey the precautions that follow to make sure that the device is correctly installed.

- Make sure that there is sufficient space on all sides.
- Protect the signal converter from direct sunlight. If necessary, install the weather protection accessory.
- Do not subject the signal converter to heavy vibrations. The devices are tested for vibration and agree with EN 50178 and IEC 60068-2-6.

3.3 How to prepare the tank before you install the device

To avoid measuring errors and device malfunction, obey these precautions.

3.3.1 Recommended mounting position

Follow these recommendations to make sure that the device measures correctly.

Figure 3-1: Recommended nozzle position for liquids, pastes and slurries

- ① Nozzles for DN40 or DN50 Horn antennas, or DN50 Hygienic antenna
- ② Nozzles for DN80, DN100, DN150 or DN200 Horn antennas and DN80 or DN150 Drop antennas
- ③ Tank height
- ④ Tank diameter
- ⑤ Minimum distance of nozzle from the tank wall : $1/7 \times$ tank height
Maximum distance of nozzle from the tank wall : $1/3 \times$ tank diameter
- ⑥ Minimum distance of nozzle from the tank wall : $1/10 \times$ tank height
Maximum distance of nozzle from the tank wall : $1/3 \times$ tank diameter

If possible, do not install a nozzle on the tank centerline.

Do not put the device near to the product inlet. If the product that enters the tank touches the antenna, the device will measure incorrectly. If the product fills the tank directly below the antenna, the device will also measure incorrectly.

Figure 3-2: Product inlets

- ① The device is in the correct position.
- ② The device is too near to the product inlet.

Figure 3-3: More than 1 FMCW radar level meter can be operated in a tank

More than 1 FMCW radar level meter can be operated in a tank.

3.3.2 Theoretical data for hygienic applications

To make the cleaning of the antenna easier, attach the device to a short socket.

Figure 3-4: Requirements for hygienic applications

- ① Maximum height of process connection: 50 mm / 2"

3.4 Installation recommendations for liquids

3.4.1 General requirements

We recommend that you configure the device when the tank is empty.

Figure 3-5: General Installation recommendations

- ① Do not tilt the device more than 2°
- ② We recommend that you do an empty spectrum recording if there are too many obstacles in the radar beam (refer to the handbook), or install a bypass chamber or stilling well.
- ③ 2.5 mm / 0.1" max. for high-dielectric constant liquids
- ④ Curved and conical tank bottoms. Refer to the handbook for fine adjustment of the device.
- ⑤ Beam radius (DN40 horn antenna): increments of 180 mm/m or 2.15"/ft (10°)
 Beam radius (DN50 horn antenna or DN50 Hygienic antenna): increments of 130 mm/m or 1.55"/ft (7.5°)
 Beam radius (DN80 horn antenna): increments of 90 mm/m or 1.1"/ft (5°)
 Beam radius (DN100 horn antenna or DN80 Drop antenna): increments of 70 mm/m or 0.83"/ft (4°)
 Beam radius (DN150 horn antenna): increments of 52.5 mm/m or 0.63"/ft (3°)
 Beam radius (DN150 Drop antenna or DN200 horn antenna): increments of 35 mm/m or 0.42"/ft (2°)

3.4.2 Standpipes (stilling wells and bypass chambers)

Use a standpipe if:

- There is highly conductive foam in the tank.
- The liquid is very turbulent or agitated.
- There are too many other objects in the tank.
- The device is measuring a liquid (petro-chemicals) in a tank with a floating roof.
- The device is installed in a horizontal cylindrical tank (refer to the end of this section)

Figure 3-6: Installation recommendations for standpipes (stilling wells and bypass chambers)

- ① A stilling well solution
- ② A bypass chamber solution
- ③ Air circulation hole
- ④ Level of the liquid

- *The standpipe must be electrically conductive.*
- *The inside diameter of the standpipe must not be more than 5 mm / 0.2" over the diameter of the antenna (for a high-dielectric constant liquid).*
- *The standpipe must be straight. There must be no sudden changes in internal diameter greater than 1 mm / 0.04".*
- *The standpipe must be vertical.*
- *Recommended surface roughness: $\leq \pm 0.1 \text{ mm} / 0.004"$.*
- *Stilling well only: The bottom of the stilling well must be open.*
- *Make sure that there are no deposits at the bottom of the standpipe.*
- *Make sure that there is liquid in the standpipe.*

Stilling wells: floating roofs

If the device must be installed on a tank with a floating roof, install it in a stilling well.

Figure 3-7: Floating roofs

- ① Sediment
- ② Support fixtures
- ③ Stilling well
- ④ Floating roof
- ⑤ Product
- ⑥ Tank

Stilling wells: horizontal cylindrical tanks

We recommend that you install the device in a stilling well if the device:

- is for a horizontal cylindrical tank,
- is in a metallic tank,
- measures a product with a high dielectric constant and
- is on the centerline of the tank.

Figure 3-8: Horizontal cylindrical tanks

- ① The device is installed without a stilling well. There are multiple reflections. Refer to the CAUTION! that follows.
- ② The device is installed in a stilling well and measures correctly.

*If the device is installed in horizontal cylindrical tank that contains a high dielectric constant liquid without a stilling well, do not put it on the tank centerline. This will cause multiple reflections and the device will not measure accurately. Use the **Multiple Reflections** function in **Supervisor > Advanced Setup > Installation Setup** to keep the effects of multiple reflections to a minimum. For more data, refer to "Function description" in the handbook.*

Bypass chambers

Installation next to tanks containing one liquid and foam

- The top process connection of the bypass chamber must be above the maximum level of liquid.
- The bottom process connection of the bypass chamber must be below the lowest measured level of liquid.

Installation next to tanks containing more than one liquid

- The top process connection of the bypass chamber must be above the maximum level of liquid.
- The bottom process connection of the bypass chamber must be below the lowest measured level of liquid.
- Additional process connections are necessary for the liquids to circulate freely along the length of the bypass chamber.

Figure 3-9: Installation recommendations for bypass chambers that contain more than one liquid

- ① Bypass chamber
- ② Additional process connection

3.5 How to install the device on the tank

3.5.1 How to install a device with a flange connection

Equipment needed:

- Device
- Gasket (not supplied)
- Nuts and bolts (not supplied)
- Wrench (not supplied)

Requirements for flange connections

Figure 3-10: Flange connection

For more data, refer to the handbook.

3.5.2 How to install a device with a threaded connection

Equipment needed:

- Device
- Gasket for G 1½ connection (not supplied)
- 50 mm / 2" wrench (not supplied)

Requirements for threaded connections

Figure 3-11: Threaded connection

For more data, refer to the handbook.

3.5.3 How to install a device with a hygienic connection

To make the cleaning of the antenna easier, attach the device to a short socket.

BioControl®

Equipment needed:

- Device with BioControl® adaptor
- Flange bolts
- Wrench (not supplied)

Figure 3-12: BioControl® connection

- ① BioControl® connection on the tank
- ② Flange bolts

Tri-Clamp®

Equipment needed:

- Device with Tri-Clamp® adaptor
- Gasket (not supplied)
- Band clamp (not supplied)

Figure 3-13: Tri-Clamp® connection

- ① Tank socket
- ② Band clamp

DIN 11851

Equipment needed:

- Device with a DIN 11851 adaptor
- Gasket (not supplied)
- DIN 11851 nut

Figure 3-14: DIN 11851 connection

- ① Tank socket
- ② Nut for DIN 11851 connection

SMS

Equipment needed:

- Device with a SMS adaptor
- Gasket (not supplied)
- SMS nut

Figure 3-15: SMS connection

- ① Tank socket
- ② Nut for SMS connection

VARIVENT®**Equipment needed:**

- Device with a VARIVENT® adaptor
- Clamp (not supplied)

Figure 3-16: VARIVENT® connection

- ① Tank socket (VARIVENT® Access Unit – not supplied)

4.1 Safety instructions

All work on the electrical connections may only be carried out with the power disconnected. Take note of the voltage data on the nameplate!

Observe the national regulations for electrical installations!

For devices used in hazardous areas, additional safety notes apply; please refer to the Ex documentation.

Observe without fail the local occupational health and safety regulations. Any work done on the electrical components of the measuring device may only be carried out by properly trained specialists.

Look at the device nameplate to ensure that the device is delivered according to your order. Check for the correct supply voltage printed on the nameplate.

4.2 Electrical installation: outputs 1 and 2

Figure 4-1: Electrical installation

- ① Terminal compartment cover
- ② Output 1: current output -
- ③ Output 1: current output +
- ④ Grounding terminal in the housing
- ⑤ Output 2: current output - (option)
- ⑥ Output 2: current output + (option)
- ⑦ Grounding terminal between the process connection and the converter

Output 1 energizes the device and is used for HART® communication. If the device has the second current output option, use a separate power supply to energize output 2.

4.2.1 Non-Ex devices

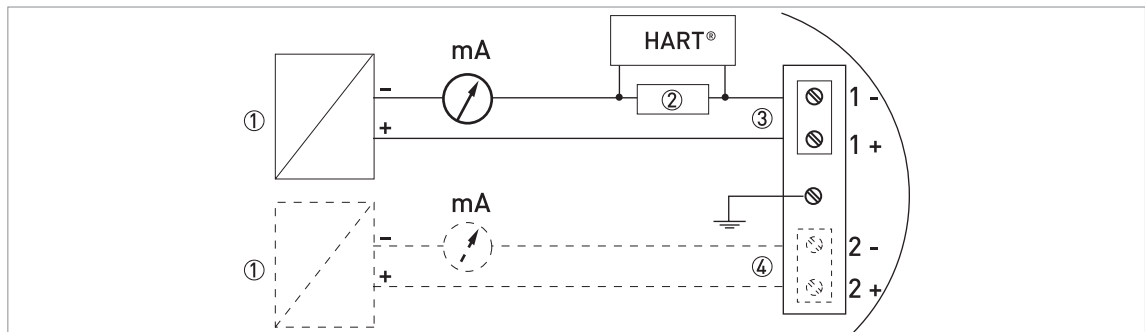

Figure 4-2: Electrical connections for non-Ex devices (standard software)

- ① Power supply
- ② Resistor for HART® communication
- ③ Output 1: 14...30 VDC for an output of 22 mA at the terminal
- ④ Output 2: 10...30 VDC for an output of 22 mA at the terminal

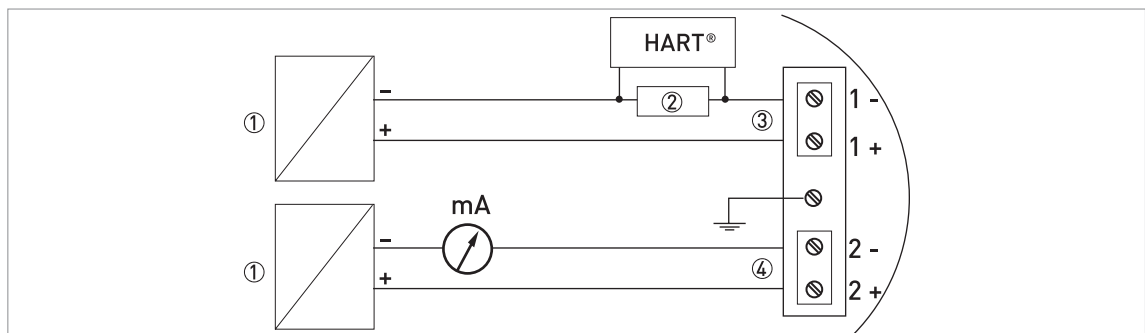

Figure 4-3: Electrical connections for non-Ex devices (fast motion software option)

- ① Power supply
- ② Resistor for HART® communication
- ③ Output 1: 14...30 VDC for a constant output of 16 mA at the terminal
- ④ Output 2: 10...30 VDC for an output of 22 mA at the terminal

4.2.2 Devices for hazardous locations

For electrical data for device operation in hazardous locations, refer to the related certificates of compliance and supplementary instructions (ATEX, IECEx, FM, CSA etc.). You can find this documentation on the DVD-ROM delivered with the device or it can be downloaded free of charge from the website (Download Center).

4.3 Protection category

The device fulfils all requirements per protection category IP66 / IP67. It also fulfils all requirements per NEMA type 4X (housing) and type 6P (antenna).

Make sure that the cable gland is watertight.

Figure 4-4: How to make the installation agree with protection category IP 67

- Make sure that the gaskets are not damaged.
- Make sure that the electrical cables are not damaged.
- Make sure that the electrical cables agree with the national electrical code.
- The cables are in a loop in front of the device ① so water does not go into the housing.
- Tighten the cable feedthroughs ②.
- Close unused cable feedthroughs with dummy plugs ③.

4.4 Networks

4.4.1 General information

The device uses the HART® communication protocol. This protocol agrees with the HART® Communication Foundation standard. The device can be connected point-to-point. It can also operate in a multi-drop network of up to 15 devices.

The device output is factory-set to communicate point-to-point. To change the communication mode from **point-to-point** to **multi-drop**, refer to "Network configuration" in the handbook.

4.4.2 Point-to-point connection

Figure 4-5: Point-to-point connection (non-Ex)

- ① Address of the device (0 for point-to-point connection)
- ② 4...20 mA + HART®
- ③ Resistor for HART® communication
- ④ Power supply
- ⑤ HART® converter
- ⑥ HART® communication software

4.4.3 Multi-drop networks

Figure 4-6: Multi-drop network (non-Ex)

- ① Address of the device (n+1 for multidrop networks)
- ② Address of the device (1 for multidrop networks)
- ③ 4 mA + HART®
- ④ Resistor for HART® communication
- ⑤ Power supply
- ⑥ HART® converter
- ⑦ HART® communication software

5.1 Order code

Make a selection from each column to get the full order code. The characters of the order code highlighted in light grey describe the standard.

KROHNE product overview

- Electromagnetic flowmeters
- Variable area flowmeters
- Ultrasonic flowmeters
- Mass flowmeters
- Vortex flowmeters
- Flow controllers
- Level meters
- Temperature assemblies
- Pressure transmitters
- Analysis products
- Products and systems for the oil & gas industry
- Measuring systems for the marine industry
